#### **Long Range Professional Development Plan**

#### Introduction

Professional development can be the difference between a school that has success with student improvement and job satisfaction and a school that stays complacent and simply pushes students through the school system. The three data driven goals that I have selected to base my long range professional development plan off of are in the area of reading, math and social/emotional development. The reading goal that I have created is that at least 70% of students will score a level three or four on the 2021 Kansas Assessment Program reading assessment. The math goal is that at Sunset Hill we will have 70% of students score a level 3 or 4 in KAP Math Assessments in 2021. The last goal is that at Sunset Hill at least 80% of our students will be in the low risk category in both externalizing and internalizing behaviors.

## Analysis of Data—Kansas Assessment Program (Reading)

The reading goal was created based on data collected during the Kansas Assessment Program (KAP) Reading assessment. The reality at Sunset Hill is in 2017, 49.99% of students scored a level 3 or 4 on the KAP Reading Assessments. In 2019, 44.86% of students scored a level three or on the KAP Reading Assessments. (KSDE, 2020) The goal I have created is that at least 70% of students will score a level three or four on the 2021 Kansas Assessment Program reading assessment.

Professional development to assist in achieving this goal is done throughout the school year. At least once a month there will be a professional development activity based on the data driven goal. Some of the professional development includes: training on Dyslexia strategies, assessing Reading Street curriculum resource to assure equity, utilizing the Raz-Kids/Reading A-Z resource purchased, training on small group instruction and brainstorming of ideas to improve small group instruction and conversations based on data collected through progress monitoring, Raz-Kids/Reading A-Z, AimsWeb benchmarks and Kansas Assessment Program reading assessment scores.

## Analysis of Data—Kansas Assessment Program (Math)

The second goal is in the area of math based on scores on the Kansas Assessment Program math assessment.

Our reality at Sunset Hill is that in 2017, 52.56% of students score a level 3 or 4 on KAP Math Assessments and in 2019,

48.1% of students scored in a level 3 or 4 on KAP Math Assessments. (KSDE, 2020) The goal that I have created is goal at Sunset Hill we will have 70% of students score a level 3 or 4 in KAP Math Assessments in 2021.

Professional development will be conducted throughout the year. Staff will receive training on how to provide effective small group math instruction by the building learning coach, principal and given the opportunity to learn from their peers as well. When staff are given the opportunity to learn from colleagues, it will be in casual discussions with K-2 grade and 3-5 grade bands. This will allow teachers to discuss what has been working well, what areas still need improvement, and if there are any resources that staff feel like they need to continue to improve their small group instruction. Each grade level will also have collaboration time built into the professional development schedule to use the Culturally Relevant Resource rubric on the Math Expressions resource to assure that it is an equitable resource. This data will then be review by the Equity Team and Building Leadership Team to help decide if the resource is the best fit for Sunset Hill.

### Analysis of Data—Student Risk Screening Scale (Internalizing and Externalizing)

The last goal was based off of data from our building's data on the Student Risk Screen Scale (SRSS) for internalizing and externalizing behaviors. The SRSS is completed by general education teachers every fall, winter and spring. General education teachers give each student a rating on different behaviors in the internalizing and externalizing categories. External behaviors include kicking, biting, hitting, yelling and other forms of physical and verbal aggression.

(Lane, et al., 2020) Internal behaviors include withdrawn, lack of friends, stealing and crying. (Lane, et al., 2020) Teachers rank students on a scale that shows if the behavior is in the red, yellow or green tier. At Sunset Hill our reality is that, 72.67% of students are in the low risk category for externalizing behaviors. At Sunset Hill, 68.77% of students are in the low risk category for internalizing behaviors. The goal that I created is that at Sunset Hill at least 80% of our students will be in the low risk category in both externalizing and internalizing behaviors. Data will also be compiled on the building Ci3T plan and its implementation and effectiveness throughout the building.

Professional development will be conducted throughout the year. Before the start of the school year, staff will have a one hour session on how to provide behavior specific praise and use Eagle Bucks by the building leader. Staff will also receive training on de-escalation strategies by a district behavior consultant. These de-escalation strategies are based off of the MANDT program, but will be taught to all staff. A book study will also be conducted throughout the year by all staff including classified staff members. The book is *Lost at School: Why Our Kids with Behavioral Challenges are Falling Through the Cracks and How We Can Help Them* by Ross Greene. Staff will also be trained on morning meetings that they will be expected to hold every day. Each primary grade level team will be provided a copy of *80 Morning Meeting Ideas for Grade K-2 by* Susan Lattanzi Roser. Also, every intermediate grade level team will receive a copy of *80 Morning Meeting Ideas for Grade 3-6* by Carol Davis. Professional development will also be provided by the district mental health coordinator and Douglas County mental health team to provide strategies on assisting students with anxiety and internalizing behaviors and how to assist families in accessing community resources.

#### Reflection

There were several components of this long range professional development plan that made it much more difficult than I thought it would be. The first component was the difficulty of prioritizing or deciding which content, strategy or activity had the highest level of urgency or biggest impact on student achievement. This was difficult as all three goals are important for student improvement and growth. I chose to take a "speed dating" professional development approach for the beginning of the year to help give a brief introduction to the areas of focus for the coming year.

The second area I found difficult was assuring that the professional development and activities are relevant for and timely. This includes planning around breaks such as fall break, winter break, and spring break. I had to analyze to make sure that too much time didn't pass between different activities and subject areas so that the information stays on the forefront of staff members instruction, planning and minds.

Another struggle I faced was assuring that professional development is meaningful for all staff including classified staff such as paraeducators and custodial staff, specials teachers and special education teachers. If staff do not find the

professional development meaningful, they will not be engaged which can lead to behavior that distracts other staff or may make staff feel that they are not a part of the school improvement plan and student success.

There was one area that I am extremely lucky that Lawrence has built into the school calendar. This is early release every Wednesday. This gives staff two hours a week to collaborate or have professional development. I relied heavily on the early release time each week to provide professional development for each of the three goals. Without the two hours of time on Wednesdays each week, I would not have been able to provide nearly as many different strategies and approaches for meeting each of the goals in the data driven action plan.

#### Conclusion

By having a continuous school improvement plan based on data, educational leaders are able to build a schedule of professional development that is meaningful for staff and will greatly impact student improvement and achievement. By utilizing data to create the professional development plan for the year, staff will be able to see direct connections to the school mission and vision. The more staff see the connections and feel the connections to student improvement, you will see a positive impact on the school culture and climate.
