

My good friend: a neuroscientist from Australia **Milos Vojvodic** would like to connect with neurologists, MD's

that are into setting up these official clinical trials for any disease.

He can help with his expertise.

If you know of a funder for 1 neurologist who will also set up this trial, please let me know thank you! :)

I found a neurologist (he needs funding) into the first ever official RSO- protocol (=concentrated cannabis oil) trial to cure Parkinson's now & soon most terminal diseases!!

Several other MD's are since, also setting up clinical trials following this protocol for all sorts of diseases.

FIRST TRIAL EVER FOLLOWING THIS PROTOCOL

For this official clinical trial following Rick Simpsons protocol (I informed a neurologist for a while & he now indicated he lacks money & resources): I want to grow the strain needed. No-till, permaculture, veganic. With an official tender to grow medical cannabis now available.

I am putting together a team: funders, managers, no-till, permaculture, veganic cultivation experts, extraction & lab. professionals, MD's! Who's in?

I now have a team but more teammates are welcome.

WANTED: MEDICAL GRADE, 100% INDICA, THC & CBD 20% AT LEAST, VEGANIC

Who has this specific type of medicine already? That can export? So this trial can happen sooner. Or who knows of anybody who has this particular strain (or seeds) needed for this official clinical trial.

It's not available so I'll grow it.

“It is still widely believed that cannabinoids are drugs and they make you crazy, make you mad, that they don’t have therapeutic value and they are addictive,” says Manuel Guzman, a professor in the Department of Biochemistry and Molecular Biology at Complutense University in Madrid and one of the world’s leading scientists studying the effects of cannabis on cancer cells. But, according to Guzman, that’s “based on ignorance. Knowledge takes time to get absorbed by society and the clinical community.”

Hi friend(s),

How are you?

I found all this information by exploring the internet and would like to share this with you:

People are healing from various terminal illnesses.
I think this needs to be investigated by professionals.
Would you like to invest or in any other way be part of this clinical trial, using veganic full plant extracts.

Following the Rick Simpsons protocol treatment

<http://phoenixtears.ca/message-from-rick/>

This is the official website of Rick.

Now to eradicate Parkinson’s disease and hopefully this will soon be used worldwide to eradicate other/ all devastating and terminal diseases too.

I think this should be funded by the system. Sign the petition to get this done worldwide..

I have found a neurologist & a team of MDs willing to conduct several official clinical trials following the Rick Simpson protocol treatment.

The neurologist does not have funding yet.

Perhaps they could even all work together on this if that makes them feel more confident about this completely new healing method. Because even though a lot of research has been done already on the use of cannabis as a medicine for various diseases with positive results. For instance a recent one proving it is safe for seniors in a long-term care facility to use cannabis oil and they were able to cut their medications for several serious conditions in half and their quality of life greatly improved; as well as that of the caregivers. This is no new medicine. In Israel for instance this is already widely used in nursing/ elderly homes. The quantity and protocol is new however. Some scientific background information on this; cannabis has two compounds called THC and CBD which can mimic anandamide and 2-AG respectively. So when you consume cannabis, the THC and CBD are able to fit into the cannabinoid receptors in the same way that anandamide and 2-AG do. This is the reason why cannabis works as a medicine.

Please contact me for the name and contact details of the neurologist if you can help.

About money and resources he needs to: eradicate Parkinson's disease by starting a clinical study on parkinson patients using vegan organic full plant extracts according to Rick Simpsons protocol treatment.

I have been informing him for some time, about the great results you can read about yourself, on the internet, that have been happening with the dosage and the 100% indica variety used in the R.S.O.(= Rick Simpson.oil) -treatment protocol.

People are healing from various terminal illnesses.

I think this needs to be investigated by professionals.

If done right; this will be a success:

this will be used for all sorts of diseases all around the world.

The R.S.O. has to be diluted for it to become legal in some countries

More can be ingested to meet the amounts needed according to:

Rick Simpson's protocol:

~Eat 60 gram in 90 days. Of pure T.H.C.-oil. With a one month period build up, to be able to tolerate this amount.

~For this a 100% indica strain is needed. The plant's profiles have to be examined.

I am aware the reported ancestry of the most common marijuana strains only partially captures their true ancestry because of the dark ages our herb has gone through. for this trial you need a

100% indica (in ancestry & characteristics & I do not believe in the scientific community ignoring this because they have not been able to find the difference yet!) with at least 20% CBD & THC both. Even though the scientific cannabis community is working towards leaving these terms behind because they can't find a difference in compounds YET. It is obvious in smell, taste, characteristics & so much more. Indica is from the mountains & colder areas & sativa is a tropical plant. 100% Indica only.

In other words it has to have the reported ancestry and ALL OF THE indica characteristics:

Highest myrcene levels, small plant, thick leaves, with dense compacted buds and short flowering time and so on.

~It cannot have any sativa in it. I. It has to be a 100% indica. Same goes for ruderalis. No ruderalis. 100% indica.

Most likely because of the highest levels of the terpene: myrcene in a 100% indica strain, causing sleep and rest which will be a big part of the healing process.

More than likely there are more components in this 100% indica strain that we are not aware of yet that work in synergy with each other and may be needed too for the healing to occur.

~And on top of that it has to have the highest possible thc- and highest cbd- levels, both around 20%.

Growing the plants has to be done in an veganic way, with no poison of any kind and natural predators for plagues. Also everything that is added to the soil or sprayed on the plants etc. has to be 100% vegan in origin. Look at vegan permaculture and cover crops. Vegan no till. veganic gardening Etc.

Apart from it, be healthy for you, mentally. For moral schizophrenia is a mental disease with detrimental effects, not to be underestimated. For health reasons the vegan diet is the best possible diet too, if done right.

It has been scientifically proven recently; Parkinson's disease (and a lot of other diseases too) starts in the bowels/ gut. The pathogenesis of Parkinson's disease involves the accumulation of aggregated α -synuclein, which has been suggested to begin in the gastrointestinal tract. And even though the best medicine for this; is the R.S.O.-treatment that I suggest here; food is very important too. Many hospitals worldwide already give a vegan diet to patients because they know it is healthier. For example: The American Medical Association is now telling hospitals to go vegan and ban meat and dairy.

The Institute of Research on Cancer is asking the population to cut down meat and avoid processed meat.

And according to the Dietitians of Canada, "a healthy vegan diet has many benefits, including lower rates of obesity, heart disease, high blood pressure / cholesterol, type 2 diabetes, and certain types of cancer."

And Canada's Draft Food Guide Favors Plant-Based Protein And Eliminates Dairy As A Food Group!

Other important factors to consider:

The plants have to be fully matured before harvested.

For purity. No nutrients should be given at the end of flowering. (Flushing)

Also the extraction process has to be pure. So no toxic solvents can be used. It has to be done with food grade 96% alcohol only. This is not what Rick Simpson uses in his movie/ initially so do not use what he does (naphtha) ever.

HEALING QUALITIES VS EXTRACTION METHODS

Solventless extracts I like most for the reason of it being as pure as possible.

Because even if you use the purest extraction methods, the chance of there being any slightest amount of residue left behind is always present. This can potentially be dangerous. Because for this trial people need to eat enormous amounts of extract & these are very sick people we are dealing with, it must be as pure as possible.

However.

We must also take into consideration what the healing qualities will be; depending on the extraction method.

Because it has been proven in labs for instance: CBD that is acquired through CO2 extraction loses all cancer killing properties!

& It's been proven by experience experts:

RSO cures diseases.

I would like to know: Does rosin keep it's healing qualities?

& If they tested this in a lab on cancer killing properties; & what does this mean for the other diseases that have been cured with RSO?

For there could be/ are different components responsible for healing different diseases & we must know all of this.

I have found 1 experience-expert that finds relief in solventless extractions. Compared to the 1000ths who eradicated terminal diseases with RSO. But that's just because the solventless method is not used very often. The decarboxylation process has to be monitored professionally.

All of these precise precautions are necessary because these are sick people we are dealing with with a low immune system. For this first ever and groundbreaking trial (and all the others too) to succeed we must make sure there are absolutely no residues or toxins of any kind that can be the possible cause of the failure of this clinical trial to be officially conducted by a neurologist.

As for the side effects: The building up period of 1 month has to be done very gradually and the first dosage should be very small. 4 hour intervals should be maintained between eating the pure t.h.c.-oil.

There is lots of room for research to continue. On the endocannabinoid system of humans that is far from being completely understood or 'mapped'. All living organisms are believed to have an endocannabinoid system. It is the main physiologic system involved in establishing and maintaining human health. But also to the over 80 distinct cannabinoids found so far in cannabis need more research. And also other components like terpenes and so on.

Because for this treatment a lot of oil has to be consumed there could be possible side effects. This has to be monitored professionally. For your reassurance. Please remember also and inform the patients: officially in the history of mankind nobody has ever died from an overdose of cannabis. As for the side effects, people can feel quite ill for a while if the dose is not increased gradually enough over time.

Because this can vary per person this has to be controlled per patient and mostly by the patient. Inform them enough so they are not scared and know what to do if this might occur:

Sweet fruits should be advised to keep at hand when feeling too much of the effect. Also cbd-oil can be taken to reduce these effects.

Recommended: walking canes because parkinson can interfere with balance already.

Certain training exercises (like qi gong, yoga, dancing, tai chi, etc.) should be given and encouraged and some exercises that can be done at home; not only to improve balance but also to accelerate the healing process. This is very important for balance and has to be part of the treatment. Because falling can be a serious danger and has to be prevented.

Elaborate choice of food advice taking the patients preferences into consideration is advised. A healthy vegan diet is to be advised covering all necessary nutrients. And encourage more water intake. Food advice is a necessary and missing part of today's medical profession.

Like other expensive treatments this should be covered financially by the system and not be paid for by the patients or by you.

Because this is a Dutch dokter (& now many others too) who is interested in starting this first ever clinical trial following the Rick Simpson protocol. Here is how you can do this there:

The reason for it not to be covered by the insurance companies;

Geneesmiddelenvergoedingssysteem (GVS) is that they claim there is no scientific proof for it to be healing.

Well:

Here is a government released advice brochure for doctors and pharmacists saying it is: scientifically proven medicinal cannabis is healing:

<https://www.cannabisbureau.nl/arts-en-apotheker/documenten/brochures/2017/12/01/informatiebrochure-artsen-en-apothekers>

Quote from this brochure released by the government, that covers the essence:

‘Er komen steeds meer wetenschappelijke gegevens beschikbaar die aantonen dat cannabis werkzaam is bij een reeks aandoeningen en ziektebeelden (zie hiervoor www.cannabis-med.org). Ook is casuïstiek bekend en beschreven waaruit blijkt dat cannabis een positief effect kan hebben bij ook andere indicaties en symptomen’

I think this will legally stand up in court to get this medicine covered by insurance companies.

Best wishes,

Dawn Eve

For scientific evidence of the effectiveness of cannabis and more information backed up by professionals, here are some links.

But there's so much more available if you only look for it.

<https://www.jpost.com/Opinion/A-higher-calling-How-Israeli-marijuana-research-changed-the-world-560381>

<https://parkinsonsnewstoday.com/2019/02/13/parkinsons-foundation-study-cannabis-disease-therapy/>

From this article, a very appropriate quote: because it is important to get the right strains for the right ailments. The approach to be taken is not to separate the cannabinoids because these plants have a synergy going on between all components, we can never copy; but to get the right strain. A 100% indica with high thc and high cbd levels:

A. Jon Stoessl, MD, co-director of the Djavad Mowafaghian Centre for Brain Health at the University of British Columbia in Vancouver. "In order to move the field forward, we need to determine which cannabinoids are likely to be beneficial or harmful." I would like to add: for a certain person in a certain situation.

<http://fibrowomen.com/cannabis-could-be-reversing-damage-to-arthritic-joints/>

<http://ehealthdigest.org/2019/02/25/suppressed-cannabis-research-from-1970s-proved-it-killed-cancer-cells/>

<https://mmpconnect.com/marijuana-overdose-can-it-kill-you/>

<https://www.forbes.com/sites/abbierosner/2019/03/04/new-medical-cannabis-research-from-israel-older-adults-dementia-and-dialysis/#21e88bc53660>

The study evaluated the response to medical cannabis of patients over 65 with conditions including cancer and its associated pain and treatment side-effects, neuropathic pain and Parkinson's disease, among others.

Efficacy, Safety and Harm Reduction

Statistical analyses revealed that after six months of treatment with cannabis, patients reported significant reduction in pain levels and improvement in quality of life and a perception that the treatment was effective for their condition. The most common adverse effects were dizziness and dry mouth; these were generally mild and in most cases correctable by adjusting the dosage or strain. While dizziness can increase the risk of falls, the number of

actual reported falls was significantly lower after the treatment compared to before it.

Particularly notable to Schleider was the reduction in opioid use reported by patients after starting medical cannabis.

What's absurd, she notes, is that in some places, opioid use is a disqualifying condition for medical cannabis use. On the contrary, she stresses, these are exactly the patients who should be given cannabis.

It's all out there :)

Only together can we change the world. Make a petition too. And tell everybody to do the same.

About us all raising our voices to get official clinical trials with cannabis healing the terminally ill:

Clinical trials for R.S.O. and legalize cannabis worldwide. Also recreational freedom because it is a preventative for many illnesses. And total growing freedom. No pathetic laws of how many plants we can grow.

And while we are at it, let's make this world a better place for everybody.
