

Type of the Paper (Research, Review, Case Study)

Layout guide for Disaster in Civil Engineering and Architecture journal using Microsoft Word

Principal Author Name¹, Corresponding author Name^{2*}, Co-author^{1,2} (if all authors have same affiliation, don't put ¹)

¹ Department of xxxy, Faculty of xxx, xxx University, P.O. Box: 0000-000, City, Country

² Department of xxxy, Faculty of xxx, xxx University, P.O. Box: 0000-000, City, Country

* Correspondence: Author Name (e-mail@e-mail.com)

Abstract

Abstract should be written concisely and informatively, with a maximum length of 250 words. For all type articles, the abstract must provide a clear overview of the study, covering the background, objectives, methods, main findings, and conclusions in a single paragraph without subheadings. Authors are encouraged to briefly describe: (1) the research background and purpose of the study; (2) the methods, materials, or approaches applied; (3) the principal results obtained; and (4) the main conclusions or implications of the study. The abstract should objectively represent the content of the manuscript and must not include information, results, or claims that are not presented and supported in the main text. **References, tables, and figures should not be cited in the abstract.**

Keywords: keyword 1; keyword 2; keyword 3 (not more than 6)

1. Introduction

The introduction should provide sufficient background and context for the study, explaining its significance and relevance to the research community. It should clearly demonstrate why the work is important and of interest to readers while avoiding an extensive literature review or a detailed summary of the results. The objectives of the study should be clearly stated at the end of this section. Authors are encouraged to place the study within a broader scientific context and emphasize its contribution to the field. The current state of research should be critically reviewed with appropriate citation of key references. Where relevant, conflicting viewpoints or controversial hypotheses should also be discussed. In addition, the introduction should briefly outline the main aim of the study and summarize the principal findings. As far as possible, the introduction should remain accessible and understandable to researchers outside the specific field of study. References must be numbered consecutively according to their first appearance in the text and cited using square brackets, for example, [1], [2,3], or [4–6]. Further details regarding reference formatting are provided at the end of this document.

2. Materials and Methods

The Materials and Methods section should provide sufficient detail to enable the study to be replicated and further developed by other researchers. Previously published methods should be appropriately referenced, with only relevant modifications described in detail. Well-established procedures may be briefly summarized with suitable citations, while newly developed methods and protocols should be explained comprehensively.

Authors are encouraged to provide adequate information regarding materials, experimental procedures, data analysis techniques, software, and protocols used in the study. The publication of a manuscript implies that all associated materials, datasets, computer codes, and experimental protocols should be made available to readers whenever possible. Any restrictions related to the availability of materials or information must be clearly disclosed during manuscript submission.

For studies involving large datasets deposited in publicly accessible repositories, authors should specify the name of the database and provide the corresponding accession numbers. If accession numbers are unavailable at the time of submission, authors should indicate that they will be provided during the review process. All accession numbers must be included prior to publication. Research involving human participants, animals, or other studies requiring ethical approval must clearly state the approving authority and include the relevant ethical approval reference number or code.

Where applicable, authors must also disclose the use of generative artificial intelligence (GenAI) in the preparation of the manuscript. This includes the use of GenAI for generating text, data, graphics, or for assisting in study design, data collection, analysis, or interpretation. The use of GenAI solely for basic language editing, such as grammar, spelling, punctuation, or formatting corrections, does not require disclosure.

3. Results and Discussion

This section may be organized into appropriate subheadings to improve clarity and readability. It should present a clear, concise, and accurate description of the experimental results, along with their interpretation and the conclusions that can be drawn from the study. Authors may combine the Results and Discussion into a single section where appropriate. The findings of the study should be discussed critically and in relation to the objectives of the research. The significance, implications, and potential contributions of the results should be clearly highlighted throughout the discussion. Comparisons with relevant previous studies may be included where necessary; however, excessive citation and lengthy discussion of already published work should be avoided. The section should focus primarily on the originality, interpretation, and scientific relevance of the reported findings.

3.1. Subsection Headings

Authors should define all abbreviations at their first occurrence in the text. A separate list of abbreviations may also be provided at the end of the manuscript where appropriate. Authors are strongly encouraged to use the International System of Units (SI units) throughout the manuscript. Where non-SI units are used, the corresponding SI equivalents should also be provided. Manuscripts must be written in clear and understandable English and should be carefully proofread to ensure correct spelling, grammar, and formatting. Manuscripts that are incomplete or do not meet the required quality standards may be returned to the authors for revision prior to review. As part of the editorial and peer-review process, all submitted manuscripts will undergo plagiarism screening. Turnitin software will be used to assess the originality of the submitted work and to identify potential cases of plagiarism.

3.1.1. Subsubsection

Bulleted lists look like this:

- First bullet;
- Second bullet;
- Third bullet.

Numbered lists can be added as follows:

- 1) First item;
- 2) Second item;
- 3) Third item.

The text proceeds as follows.

3.2. Figures and Tables

All figures and tables must be properly cited in the main text as Figure 1, Table 1, and so forth.

Figure 1. This is a figure.

Table 1. This is a table. Tables should be placed within the main text close to their first citation.

| Title 1 | Title 2 | Title 3 |
|-------------|---------|-------------------|
| Parameter 1 | Data 1 | Data 1 |
| Parameter 2 | Data 2 | data ¹ |

¹ Tables may have a footer.

The text continues here (Figure 2 and Table 2).

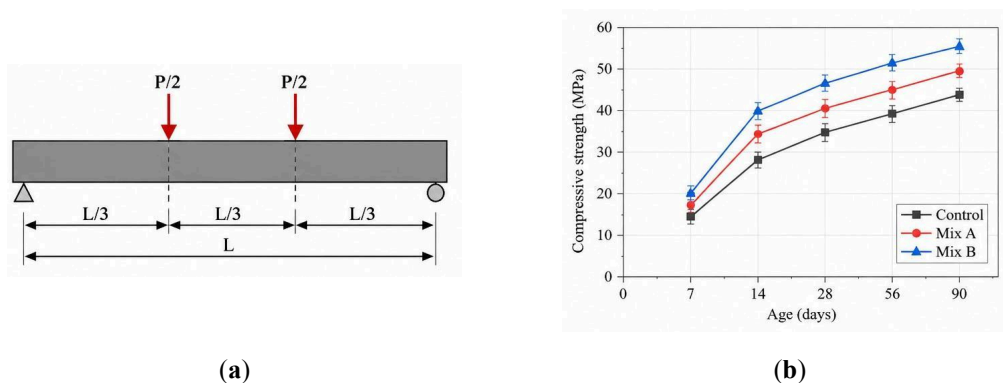

Figure 2. This is a figure. For figures containing multiple panels, the captions should be formatted as follows: (a) Description of the first panel. (b) Description of the second panel. Figures should be placed within the main text close to their first citation.

Table 2. This is a table. Tables should be positioned within the main text close to where they are first cited.

| Title 1 | Title 2 | Title 3 | Title 4 |
|-------------|---------|---------|---------|
| Parameter 1 | data | data | data |
| | data | data | data |
| Parameter 2 | data | data | data |
| | data | data | data |

3.3. Formatting of Mathematical Components

This is example 1 of an equation:

$$x = yz, \tag{1}$$

The text following an equation does not need to begin as a new paragraph if it continues the same sentence. Equations should be punctuated in the same manner as regular text.

This is example 2 of an equation:

$$X_{best}(t) = fit_i(X(t)) \tag{2}$$

If the text following an equation begins a new sentence, it should start as a new paragraph. Equations should be punctuated in the same manner as regular text.

Any source: coding or algorithm will be presented as the Courier New font of size 9 in justify format.

```
if      rand < Jr
then
        apply COOBL
else
        check stopping condition
else
```

4. Conclusions

A conclusion section must be included and should clearly state the advantages, limitations, and potential applications of the study. Recommendations for future work should also be discussed. **References should not be cited in this section.**

Acknowledgements

The Acknowledgements section should recognize all individuals who contributed to the research or manuscript preparation but do not fulfill the authorship criteria. Contributions should be clearly identified by both name and role, such as providing statistical consultation, laboratory assistance, or language editing support. Institutional support or contributions should also be appropriately acknowledged here. Funding information should not be included in this section and must instead be reported separately under the Funding subsection.

Funding

List funding sources in this standard way to facilitate compliance to funder's requirements:

- This work was supported by the name of funding sources including the type of grant and reference number [grant numbers ...]. Detailed descriptions of the programme or grants and awards are not required.
- The following statement should be included if there is no funding available for the research: This study was not supported by any grants from funding bodies in the public, private, or not-for-profit sectors.

Conflict of Interest

It should disclose any financial or non-financial interests such as political, personal, or professional relationships that may be interpreted as having influenced the manuscript. The phrase "The authors declare no conflicts of interest" should be included if there is no conflict of interest.

Generative AI Declarations

During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication.

If AI was not used, please write "Not Applicable".

Author Contributions

For research articles involving multiple authors, a short paragraph detailing each author's individual contributions must be provided. The following format is recommended: "X.X. and Y.Y: Conceptualization. X.X; Methodology, Software, Validation. X.X., Y.Y., and Z.Z: Formal Analysis, Investigation, Resources. X.X: Data Curation, Writing—Original Draft Preparation. X.X: Writing—Review and Editing, Visualization, Supervision. X.X: Project Administration, Funding Acquisition. All authors have read and agreed to the published version of the manuscript."

Authors are encouraged to refer to the [CRedit Taxonomy](#) for explanations of the contribution terms. Authorship should be limited to individuals who have made substantial contributions to the reported work.

Availability of Data and Materials

Please provide details on where the data supporting the reported results can be accessed, including links to any publicly archived datasets analyzed or generated during the study. If no new data were created, or if the data are unavailable due to privacy or ethical considerations, an appropriate statement must still be included. Authors are required to select and adapt one of the following standard statements as applicable:

- o **Available on request:** The datasets generated and/or analysed during the current study are available from the corresponding author on reasonable request.
- o **Publicly available:** The datasets generated and/or analysed during the current study are available in the [Repository Name] at [Persistent Link/DOI].
- o **Not applicable:** Data sharing is not applicable to this article as no new datasets were generated or analysed in this study.

Abbreviations

The following abbreviations are used in this manuscript (example):

| | |
|-------|--|
| PSP | Popular Scientist Publisher |
| DOAJ | Directory of open access journals |
| ASTM | American Society for Testing and Materials |
| BS EN | British Standard European Norm |

References

Authors must ensure that all references are prepared in strict accordance with the IEEE formatting guidelines and the provided examples. Consistency in citation and reference style must be maintained throughout the manuscript. Each reference entry should include the author(s)' names, article or chapter title, full journal or book title, year of publication, volume number, issue number (if applicable), and complete page range. The inclusion of a Digital Object Identifier (DOI) is highly encouraged whenever available. During the proofing stage, the journal's official formatting requirements will be strictly enforced, and any incomplete or missing reference information will be returned to the authors for mandatory correction. The reference list must strictly conform to IEEE formatting requirements:

- ✓ **Author Nomenclature:** Authors' initials should precede their surnames (e.g., P. J. Ramadhansyah). For publications with up to six authors, all author names must be listed. For works with more than six authors, list the first author followed by "et al."
- ✓ **Journal Articles:** Author(s), "Title of the article," Full Journal Name, vol. x, no. x, pp. xxx–xxx, year.
- ✓ **Conference Papers:** Author(s), "Title of the paper," in Proceedings of the Conference Name, location, year, pp. xxx–xxx.

In the text, reference numbers should be cited using square brackets [n] and placed before the punctuation mark; for example, [1], [1–3], or [1,3]. For citations that include specific page numbers, both square brackets and parentheses should be used; for example, [5] (p. 10) or [6] (pp. 101–105).

Disclaimer/Publisher's Note: The statements, opinions, and data presented in all publications are solely those of the respective author(s) and contributor(s), and do not necessarily reflect the views of Popular Scientist Publisher and/or the editor(s). Popular Scientist Publisher and/or the editor(s) disclaim any responsibility for injury to persons or damage to property resulting from the implementation of any ideas, methods, instructions, or products referred to in the published content.
