

# Xfce-Test Instructions

<https://github.com/schuellerf/xfce-test>  
<https://docs.xfce.org/contribute/dev/start>  
[https://bugzilla.xfce.org/show\\_bug.cgi?id=16249](https://bugzilla.xfce.org/show_bug.cgi?id=16249) (docs bug)  
<https://hub.docker.com/r/schuellerf/xfce-test>

## Installation

- Download <https://raw.githubusercontent.com/schuellerf/xfce-test/master/xfce-test>
- Make it executable ( `chmod u+x` )
- Download necessary components ( `./xfce-test install` )
  - On Xubuntu 20.04 it will install these packages and their dependencies, if they aren't already installed - `xserver-xephyr`, `docker.io`, `xvfb`, `jq`, and `curl` - which will download ~71Mb and require 351Mb of space
- Download the docker container ( `sudo ./xfce-test pull` )
  - It will download the container parts of `schuellerf/xfce-test` which is ~1.6Gb and require ~4.4Gb of space (as of April 2020) in `/var/lib/docker/overlay2/`
- Download a different docker container branch (listed on [dockerhub](https://hub.docker.com/r/schuellerf/xfce-test))
  - `sudo ./xfce-test list`
  - `sudo TAG=[tag-name] ./xfce-test pull`

## Run

- Run it ( `sudo ./xfce-test start` )
- Run a different branch/tag ( `sudo TAG=[tag] xfce-test start` )

## Info

- `/data` is the host's home directory
- `/git` is the git repos of each component, which can be update and rebuilt, though lost when restarting the container
- Docker Hub page - <https://hub.docker.com/r/schuellerf/xfce-test>

# Uninstall

- Remove the docker container
  - Find the schuellerf/xfce-test container's image ID ( `docker images -a` )
  - Remove the container ( `docker rmi [image's ID]` )
- Remove the installed packages that aren't needed
  - Remove main packages ( `sudo apt remove xserver-xephyr docker.io xvfb jq curl` )
  - Remove dependencies ( `sudo apt autoremove` )

## Commands (May 21st in IRC log)

- `xfce-test list` - Lists all the various branches/tags available for download
- `TAG=[tag] xfce-test pull` - Pull a particular branch/tag
- `TAG=[tag] xfce-test start` - Start a particular branch/tag
- `docker tag <image_id> schuellerf/xfce-test:[new tag]` - tag a build
-
