

Online Course Assignments

Second Semester 2017

Session Five - Data Lessons

Design a lesson around data collection and analysis. Create an essential question, write a task prompt and determine a final student product for your data collection lesson. What literacy strategies will you incorporate into the lesson?

Session Six - Probeware

Choose or design a learning experience that involves use of the DO probe you were given at the August session. Incorporate science or math practices in the activity with a focus on inquiry over a more cookbook approach. Consider how you will support the literacy skills required in the learning experience. This experience might be part of your data collection lesson or something you incorporate into your existing units of instruction.

Session Seven - Assessment and Literacy

In this session you will explore the five purposes of assessment and consider digital tools that might make formative assessment easier. Create or choose one formative assessment that incorporates student writing and can be used in your class during a lesson. You might add this assessment to data collection lesson or use it in your day-to-day planning.

Session Eight - Scenario-based Assessment

Write a scenario-based assessment like those you have been experiencing in the program for a topic you are teaching. Pull together a folder of materials to share at the June session.
