Meta description: Permanent hair removal is a breeze with The Smooth System in Englewood Cliffs, NJ. Learn about the only FDA-approved device for removing hair permanently.

H1 Permanent Hair Removal in Englewood Cliffs, New Jersey

H2 Enjoy Silky Skin with The Smooth System™ Hair Removal

The Smooth System™ uses patented technology to provide permanent hair removal capable of fully removing unwanted body and facial hair. This extraordinary FDA-approved device is the first and only of its kind. It adjusts in milliseconds using specific calibrated radio frequencies to remove hair in the selected treatment area permanently. The Smooth System™ is a device, unlike lasers. This hair removal method differs from lasers or waxing, which are only approved for “hair reduction.” The Smooth System™ is the only treatment FDA-approved for permanent hair removal.

Enjoy smooth, hairless skin. Contact Dr. Altman of Altman Aesthetic Center Med Spa to schedule your permanent hair removal consultation. We proudly provide The Smooth System™ for hair removal to all our clients in Englewood Cliffs, NJ, and surrounding areas of Purchase, NY, and NYC. Call (201) 569-3334 now or reach out to us online to schedule your consultation now.

H2 Benefits of The Smooth System™ Hair Removal

- Provides silky, smooth, and hair-free skin
- Permanent, long-term results
- Cost effective
- FDA-approved as safe and effective
- Can treat any skin or hair color
- Eliminates the risk of hypo pigmentation
- Virtually pain-free
- Uses advanced technologies, including calibrated radio frequencies

H2 How the Smooth System™ Works

The Smooth System™ uses flexible, bulbous-tipped, insulated probes. These probes ensure both safety and efficacy during the hair removal process. They ensure the hair and follicle are destroyed without risk of damage to the surrounding healthy tissue and virtually no discomfort for you.

During treatment, the flexible probe inserts into the active hair follicle, focused on the papilla, or root, of the hair. A millisecond burst of times and regulated radiofrequency, in the form of heat, is discharged, and the probe is withdrawn. As the probe withdraws, it lifts the hair out. Once removed, the hair will never grow back.

H2 Permanent Hair Removal Treatment Areas

The Smooth System™ is FDA-approved to treat the following areas:

- Brows
- Cheeks
- Upper and Lower Lip
- Ears
- Chin
- Beard & Neck Hair
- Bridge of Nose
- Moles, Tattoos, Scars
- Underarms
- Bikini Area

H2 How We Determine the Number of Hair Removal Treatments You Need

Your age, sex, desired hair removal results, and other variables all factor into the total number of treatment sessions. The number of sessions you need to make an area hair-free is equal to the time it takes for all the hairs in the area to complete an entire growth cycle. Each follicle cycles differently and will be individually treated during its active growth cycle. At any time, approximately 50% of total growth is dormant and unable to be treated with hair removal. The Smooth System™ only treats hairs while actively growing, eliminating the futile treatment of dormant hairs. Once treated, each follicle will never grow hair again, leaving the skin smoother.

H2 Permanent Hair Risks and Side Effects*

The Smooth System™ is the safest, most effective form of hair removal available today. Immediately after hair removal, the skin may be slightly red and puffy. These are normal side effects of the treatment, and they will go away on their own within a short time. Once they do, you will notice smooth and hairless skin.

H2 The Smooth System™ vs Laser Hair Removal

While it may be called laser hair removal, most devices using lasers can only reduce the amount of hair in any area of the body. The Smooth System™, on the other hand, is FDA-approved for permanently removing hair from the area.

In addition, lasers work by passing through lighter colors and targeting dark pigmentation. As such, darker skin is more prone to burns during this type of treatment. The Smooth System™ uses targeted heat without regard for color or pigmentation, making it the perfect choice for darker skin tones. It is 100% safe and cannot harm or damage the skin.

Moles, scars, or tattoos can all safely be treated with this system.

H2 Permanent Hair Removal Before and After*

The permanent hair removal before and after images show real patients achieving real results using The Smooth System™. As with all cosmetic treatments, individual experiences will vary.* However, each person shown is exhibiting the typical hair removal of this FDA-approved system.

H2 Permanent Hair Removal FAQs

H3 Does the Smooth System™ hair removal hurt?*

Most clients report feeling absolutely nothing during their sessions. As always, individual experiences will be different.*

H3 How long does a permanent hair removal treatment last?

The length of your permanent hair removal session will vary.* The time it takes for treatment depends heavily on the area(s) being treated and the amount of hair being removed. Because there is so little pain felt during treatments, session lengths can go as long as needed to achieve optimal results.

H3 Can I permanently remove my own hair at home?

While it is common for people to try to permanently remove their hair on their own at home, this is best left to the experts. While most people can use lasers, waxing, shaving, and tweezing, to remove hair, the hair follicle is still intact and will still eventually grow back. The Smooth System™ is the only treatment system FDA-approved for removing hair permanently.
