How to install mods to arma 3

Download the mod in question. from whereever, www.armaholic.com for instance.

ok you've downloaded the file, good job!

Now Take the file you downloaded and make sure its in the right folder

@"Modname" - Addons - "modname".pbo

Now the mod name can be literally anything but for your own sake you may want to keep it as is.

Now move the entire @"modname" folder into your arma 3 folder.

default: C:\Program Files (x86)\Steam\SteamApps\common\Arma 3

now thats it, the mod is installed. some mod however may come with Userconfig files alike. you can then generally just merge the folders.
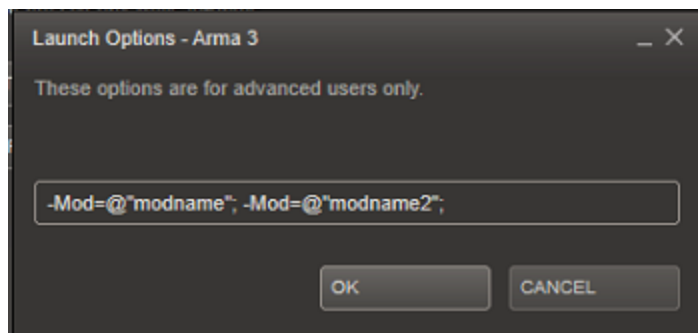

now to launching the game with said addons

Choose properties.

Now click launch options.

Now write in you modlines. you obviously want to change the name to the mod accordingly. this will save and will launch the next you click play[1].
