Open Sign Project Reflection

Throughout the process of creating the open sign, I was able to look at the tutorial video provided which clearly outlined everything needed to create the open sign. I did not find myself running into any problems as the tutorial described each step clearly without any issues. I learned how to create text on a material that I could later cut out on the CNC router. Overall, the project showed me different things about the software that I did not know were possible before and things that I have applied to projects after this. For others who want to try this project, I recommend you take your time as the tutorials are very simple if you make sure to follow each step carefully.
