

DIRECT IMPACTS REVIEW

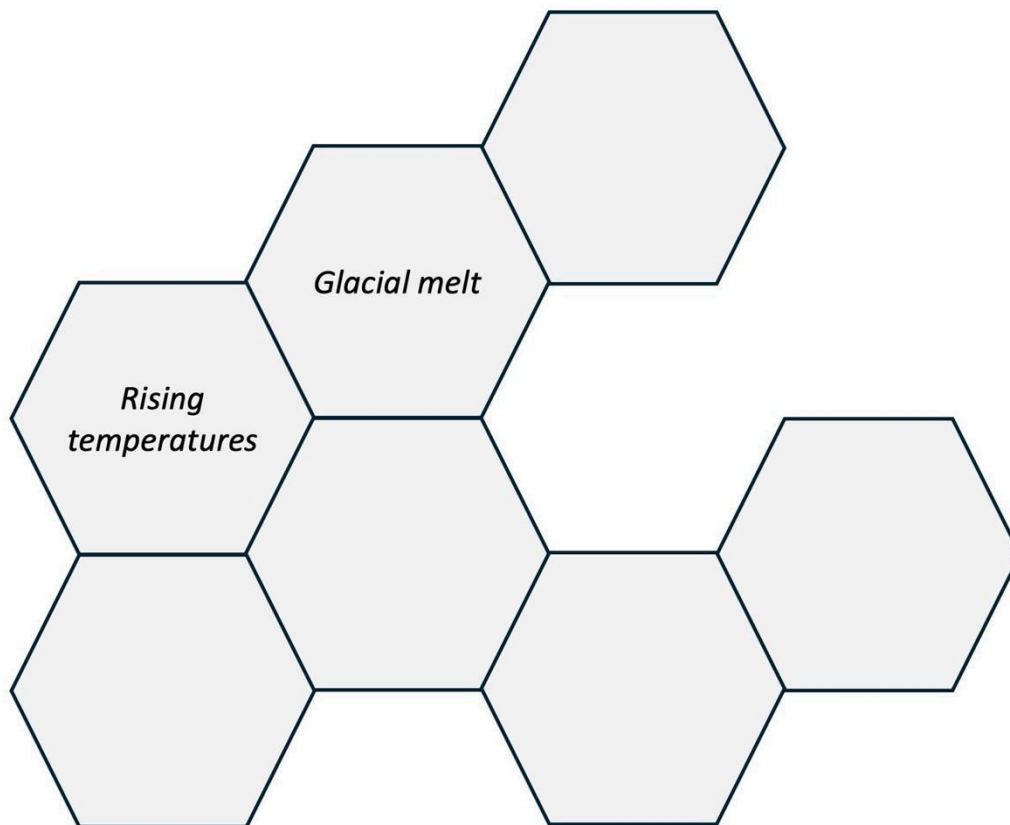

Purpose

Explore the connections between different direct climate impacts to understand how rising temperatures are impacting ecosystems.

Process

Fill in all the blank hexagons below using the word bank. Some tips:

- Each touching hexagon should be connected in some way: cause and effect, similarities, or even ideas that contrast with one another.
- There is no “right” answer, as long as you can explain the connection.
- There are more concepts in the word bank than there are blank hexagons, so you’ll have some left over.

Word Bank – Direct Impacts

- Sea level rise
- Tropical cyclone distribution
- Drought
- Marine species habitat
- Glacial melt
- Heat waves
- Wildfires
- Heavy precipitation
- Ocean acidity
