

# “Secret Debit Card”

## **WHAT IS THIS IDEA:**

A debit card that would have nothing visually printed on it.

## **EXAMPLE OF THIS IDEA:**

The debit card details would only be visible by the owner who would use special glasses that would only work with each different debit card, while wearing the special glasses. The data and information from one debit card cannot be visible to another person's glasses, without the usage of the exact matching special glasses, so other people cannot read or view another person's debit card. Every debit card will only be viewable by one specific person and one specific pair of glasses. Debit cards and the matching specific glasses will need to be marked with a code so they can show what glasses read (view) what debit cards.

## **THE BENEFIT OF THIS IDEA:**

It will be a new way to use debit cards and a new way to protect debit card information.
