

Danganronpa Another Despair Academy Installation Guide

Do not skip over any of the steps or perform them out of order, as it could result in the game not being properly playable or only playable in Korean. This guide is for Windows, but how to play on mac is covered in section 3.

1. [Change your unicode language](#)
2. [Downloading and setting up Danganronpa Another](#)
3. [Alternative download method](#)
- [Bugs and issues](#)

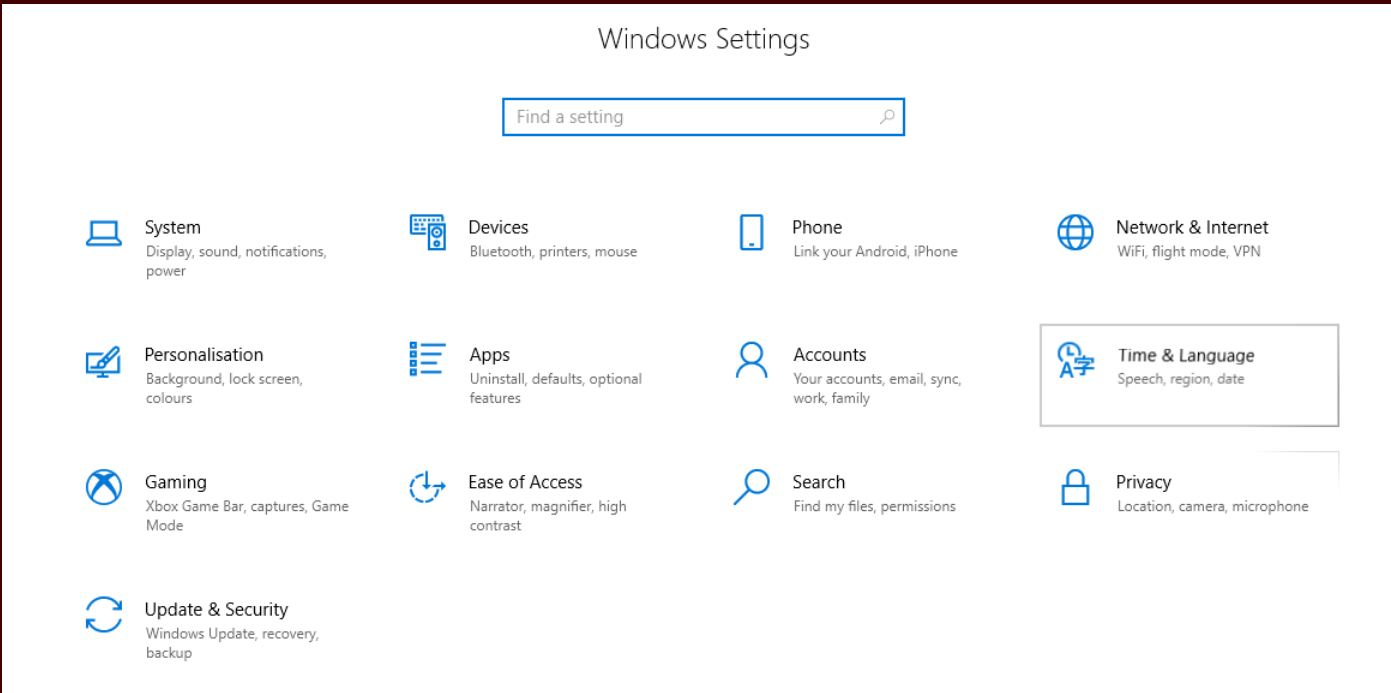

1. Change your unicode language

In order to even boot up the game, you will need to be able to change your administrative language to Korean.

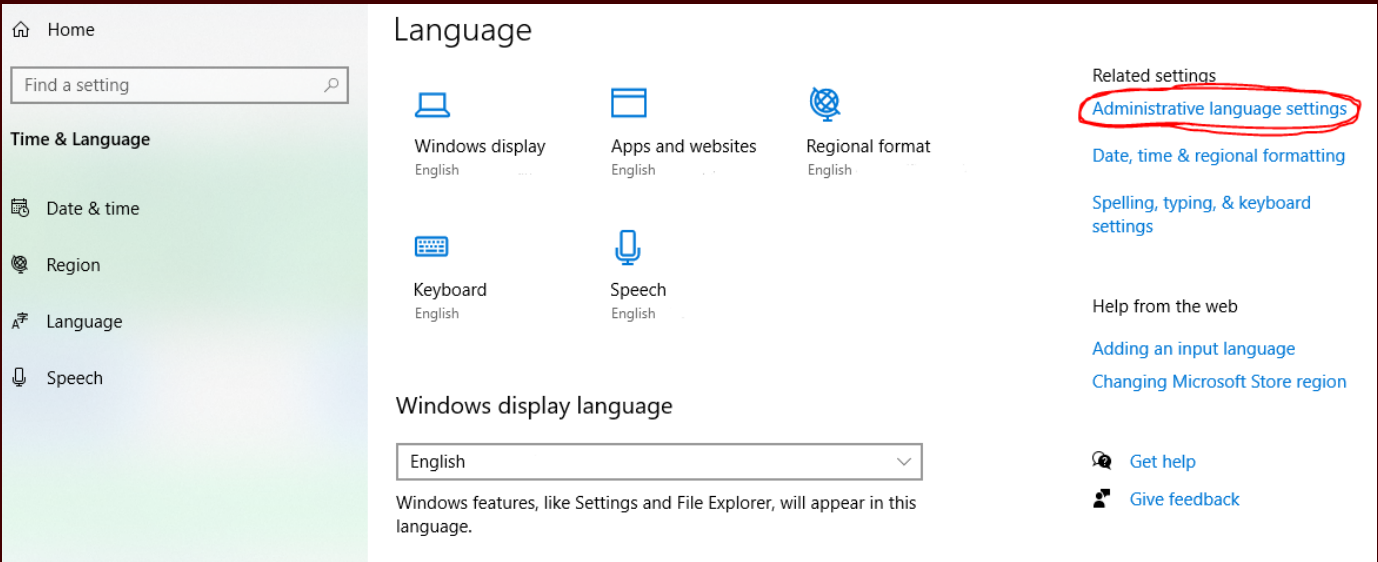

Before you even download the game, go to your Settings,

then Time & Language,

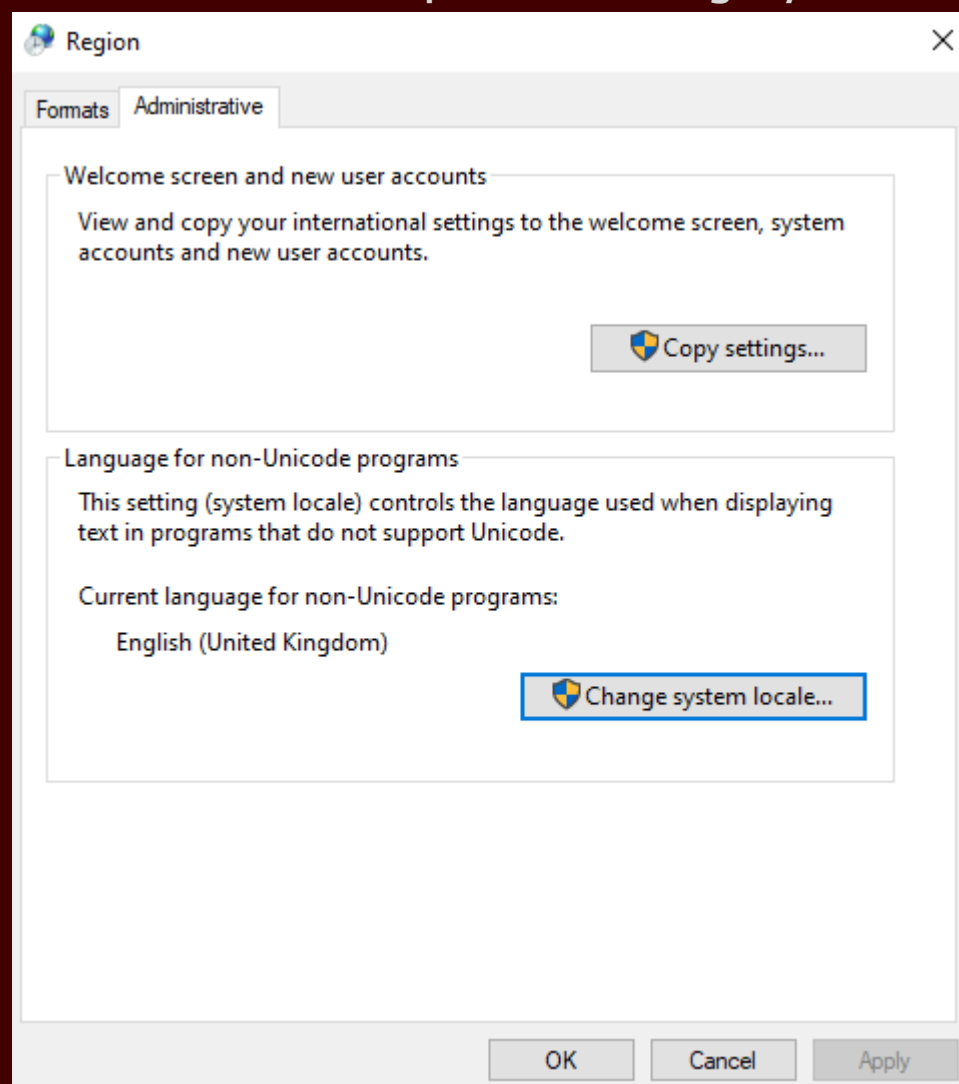

then click on the Language section. Don't mess with anything on this page, only click on Administrative language settings.

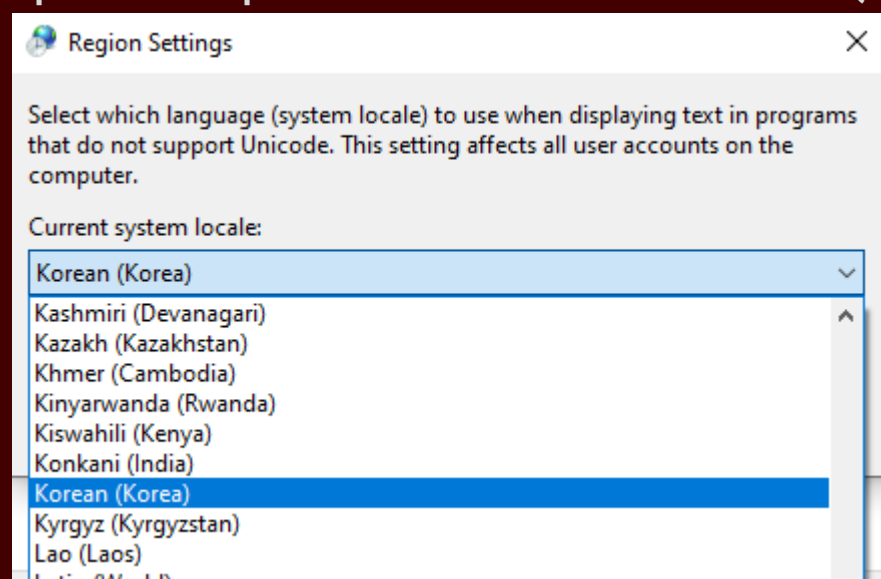

>>> Continue onto next page

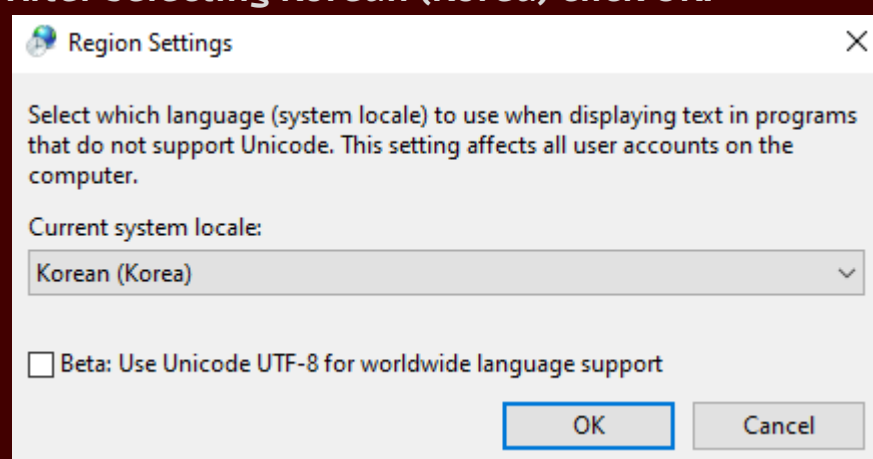

This tab should come up. Click on Change system locale.

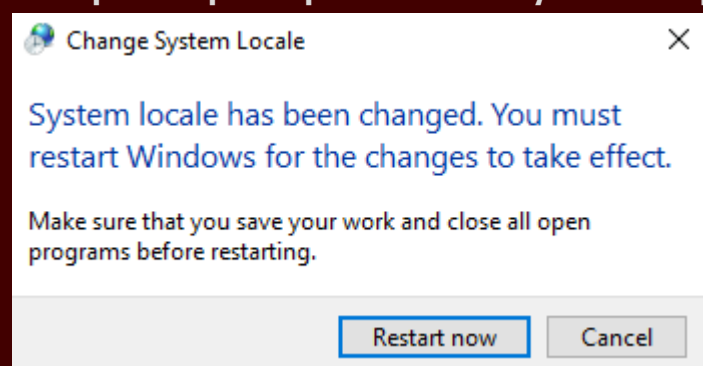

Open the dropdown and scroll down to Korean (Korea).

After selecting Korean (Korea) click OK.

Accept the prompt to restart your computer, and your unicode language will be set to Korea.

>>> Continue onto next page

2. Downloading and setting up Danganronpa Another

This process should be simple, but there is an order you need to download these.

Once you've set your unicode language to Korean, download the main game either from the release video, Discord or [here](#). However, don't boot it up yet.

Next, download the [RTP](#) so the game can run, as well as these two fonts. [1](#) [2](#)

Open up the RTP zip and run the RTP2000.exe in there. Open both fonts and click on the install button.

DO NOT SKIP THESE THREE DOWNLOADS OR FORGET TO OPEN UP AND INSTALL THEM. THE GAME WILL NOT RUN WITHOUT THE RTP, AND WITHOUT THE FONTS THE GAME WILL AUTOMATICALLY USE A STOCK BLOCKY, HARD TO READ TEXT FOR THE ENTIRE DEMO.

After running the RTP2000.exe and installing both fonts, you *should* be all good to run Danganronpa Another. In the off chance you still have issues, we recommend either going into your compatibility settings and changing it to Windows 7 or reinstalling the game.

During the game it's recommended you close most if not all applications or browsers, as due to Danganronpa Another pushing the RPGMaker 2K engine to its absolute limit, it can have serious slowdown or lag on certain computers.

However if you've followed this guide and it still refuses to work, you're on mac or still have issues with the game running poorly:

3. Alternative download method

If it refuses to work, you're on mac or still have issues with the game running poorly.

First of all, you'll need to download the unencrypted DRA1, which is accessible from the Download 2 link on the demo release video, the second link in the Discord's downloads channel or click on the image for the link.

Download 2 (For EasyRPG Player/Choco R2k Player): <https://drive.google.com/file/d/1twKP...>

Next, you'll need a RPGMaker 2k player. For this example, we're going to use EasyRPG.

[This is the link to the downloads page](#). From here, select which os you're using and download it. Next, extract the zip into any folder, it should have a Player.exe.

 Player.exe	03/10/2020 15:16	Application	15,578 KB
--	------------------	-------------	-----------

When you've done that move the DRA1 Decrypted Demo zip to the same folder as the Player.exe, right click on the zip and select Extract to DRA1 Chapter 1 Demo Decrypted.

Once it's extracted, you can rename the folder whatever you want as long as the folder containing the demo's files is in the same directory as the Player.exe.

☐ Name	Date modified	Type	Size
 DRA Chapter 1 Demo Decrypted	29/12/2020 17:39	File folder	
 Player.exe	03/10/2020 15:16	Application	15,578 KB

Run the Player.exe finally, press alt + enter to exit fullscreen if you so want and select the demo. You don't need to change your unicode language when using EasyRPG.

Known issues and bugs

This details issues and bugs with the release we're aware about and are working on, or issues resulting purely from the engine and how to deal with them.

[Issues/Bugs](#)

[Solutions/Patch Notice](#)

--Engine Issues--

Base RPGMaker 2k:

- [Slowdown/Lag during class trials](#) ([Close browser tabs or applications](#))

EasyRPG and others:

- [Cannot play video files](#) (N/A)

--Other Issues--

- [Some present reaction texts untranslated](#)
- [Satsuki and Teruya report cards crash game](#)

That covers all of the information needed to know before playing the game.

**We hope you enjoy playing the demo of
Danganronpa Another Despair Academy
and look forward to the full release!**
