Solar panels - reduce your annual energy bills*

Solar energy is the fastest growing renewable energy solution, with 1.2 million homes in the UK going solar. And it's not surprising, as typically a 12-panel solar system and a 5.2kWh (4.2 kWh usable) battery **can save you up to £904 a year**,¹ and with the **Smart Export Guarantee (SEG)**³ you can earn money back for exporting excess solar energy into the grid.

Thank you!

What happens next?

We just need to verify your quote request, so you should expect a telephone call within the next few minutes from one of our team (Monday to Sunday 8am to 9pm). Outside of working hours you will be contacted the following day.

1

You get matched with suitable installers

Protecting your personal data is one of our top priorities so we won't pass your details to companies who aren't relevant to you. We'll only put you in touch with those whose criteria matches your requirements.

2

You get a call from the installers

You should expect to get a call from between 1 - 3 solar panel installers, depending on your requirements.

3

You get to discuss what's important to you

You can discuss terms and ask any questions that you may have during the phone call with the installers. This is why we believe getting a personal call is much better than showing you generalised rates that may not be relevant to you.

Our Installations

Include easy to see reasons why the customer should buy

Benefits of solar electricity

Cut your electricity bills

Sunlight is free, so once you've paid for the initial installation, your electricity costs will be reduced. Find out how much you could save by using the [Solar Energy Calculator](#).

Cut your carbon footprint

Solar electricity is low carbon, renewable energy. A typical home solar PV system could save around one tonne of carbon per year, depending on where you live in the UK.

Include section on Maintenance

Maintenance

Solar PV systems need little maintenance. Keep an eye on nearby trees to ensure they don't begin to overshadow your system.

In the UK, panels that are tilted at 15 degrees or more benefit from being cleaned by rainfall, which helps to ensure optimal performance. Debris is more likely to build up if you have ground-mounted panels, or if you live in an area with more dust in the air. In these cases, you might need to have the panels cleaned occasionally.

Once fitted, your installer should leave written details of any maintenance checks that you should carry out to ensure everything is working properly. This should include details of the main inverter fault signals and key troubleshooting guidance. Ideally, your installer should demonstrate this to you once the system has been installed.

Keeping a close eye on your system and the amount of electricity it's generating (alongside the weather conditions) will help you understand what to expect and alert you to when something might be wrong.

The panels should last 25 years or more, but the inverter is likely to need replacing sometime during this period, at a cost of around £800 (depending on system size and the manufacturer). Some inverters have online monitoring functions and can warn you by email if the system fails.

Connor was very helpful and polite...

Connor was very helpful and polite could not ask for more really and he also put me through to a good sola company

George Taylor, 1 hour ago

Excellent

Cheerful, very informative. Listened, explained everything clearly. All round round very proffecional but friendly at the same time.

Informative and educational

Option 3: Free Solar Panels with ECO 4

Support is given as part of the government's commitment to net zero emissions by 2050 in the energy sector.

With approximately £1.3bn set aside for beneficiaries of government benefits, an estimated 6.5 million households qualify.

Despite this, a significant portion of the funding remains unclaimed, leading many low-income families to overspend on energy. As such, homeowners are encouraged to check their eligibility promptly.

The Government's ECO scheme is designed specifically for this purpose. Initiated to assist low-income families in enhancing energy efficiency, the program aims not just to decrease carbon footprints but also to help households save on energy expenses.

Importantly, with this government scheme, it is possible to qualify for this government incentive even if you're a private tenant, as long as you have your landlords permission.

The forth phase of the Energy Company Obligation (ECO) will continue to run until 2026.

Why Solar Panel Funding?

With cutting carbon emissions being so high on the agenda there are many Incentives available to help homeowners improve the energy efficiency of their properties. The Solar Panel Funding Checker will quickly find the right incentives for you and arrange the relevant surveys required to obtain funding. This is a hassle-free process and in the end, if you do not feel that funding suits you there is no obligation to have any work carried out.
