Abstract

Presenters must write an abstract of 250–300 words. The abstract should include the research objectives, research methodology, and a summary of the findings to provide an overview of the study.

Keywords: Keyword1, Keyword2, Keyword3

1. Statement of the Problem

The content should be written as a well-structured essay. Provide background information related to the research idea or its origin. Identify the problems, necessities, and significance of the study by applying relevant theories, academic principles, and supporting information. Clearly state the research objectives within a defined scope, including the theories and conceptual framework to be used. Additionally, outline the expected benefits of the research.

2. Objectives

2.1 First objective
2.2 Second objective
2.3 Third objective

3. Conceptual Framework and Hypothesis (if any)

Identify the conceptual framework and theories of the research, as well as the ideas related to the conceptual framework and hypothesis.

4. Research Methodology

This section describes how the data for this research was collected or generated, ensuring that the methods are correct and appropriate for the research problem. It presents the core elements of the research methodology, including:

4.1 Research methodology
4.2 Research procedure
4.3 Data Collection
4.4 Data Analysis

} (or the research methodology section according to the nature of the research)

5. Results

Present the results of the data analysis. This section should describe the approach to data analysis, followed by the results and interpretation. If the results are presented in the form of tables or figures, a description of the content must also be included.

6. Conclusion and Discussion

Summarize the key points of the research, presenting them in a logical and academic manner. Discuss the data gathered to support the research findings, including any shortcomings, limitations, and strengths of the research. This section should also include recommendations for further work or future research.

7. Suggestions (if any)

7.1 Suggest that the research findings can be reasonably applied to real-world practice and are likely to be feasible by providing guidelines for further work.

7.2 Generally, suggestions should be presented in two ways:

7.2.1. Suggestions for applying the research results to improve the iterative process by addressing problems and obstacles, and enhancing the guidelines for completeness.

7.2.2 Suggestions based on the research for continuous improvement, aiming to gain additional knowledge through experimental proposals that could impact future research.

8. Acknowledgements (if any)

This section expresses the author's gratitude to those who contributed to the research, acknowledging their assistance and cooperation. It reflects the academic ethics that researchers should uphold.

9. References

The reference list should be written in accordance with the APA 7th edition format.
The author of the article is responsible for the accuracy of all cited references. You can find more details at https://apastyle.apa.org/style-grammar-guidelines/references/examples.
