
TITLE MUST BE BRIEF, CLEAR AND REFLECT THE CONTENTS OF THE MANUSCRIPT

(Title is given in Indonesian. The title must be short, clear and reflect the content of the manuscript) **(16 pt Bold Capital)**

Author Name, Author Name and Author Name(12 pt Bold)

Author Affiliation (12 pt)

Email: e-mail@e-mail.com, e-mail@e-mail.com and e-mail@e-mail.com

ABSTRACT (10pt)

Abstracts are displayed in English and Indonesian, the number of 150-250 words and given keywords a minimum of 3 and a maximum of 6. Abstract contains a brief summary and contains important articles related to the article, including background, objectives, research methods, results and discussion, and conclusion.

Keywords: at least 3 keywords & each word/phrase is separated by a semicolon (;)

INTRODUCTION

This template should be used as a guide for the format and or layout of writing articles to be published in AJOSH Journal. Authors must follow ALL the rules of writing, both in terms of typeface, size, layout, number of words, systematics, and writing references. The author must also ensure that the article uses good and correct Indonesian.

The body of the article including the bibliography is written in one column as in this template. Each new paragraph must be indented into one tab (1.27 cm). Articles submitted must be in Microsoft Word format, with A4 paper size, 3 cm top and left margins, 3 cm right and bottom margins, and single line spacing. The font used in the body of the article is Times New Roman 12 pt.

Writing punctuation marks (period, comma, colon, semicolon, brackets, quotation marks, question marks, exclamation marks, slashes, etc.) is not preceded by a space and followed by a space, except when a period or comma is used in the decimal number marker. Examples of the use of this section can be seen in the entire contents of this template.

The introductory part mainly contains the reasons for conducting the research which is supported by a literature review (theoretical). The introductory section is expected to contain as many citations from scientific journals as possible (preferably from reputable national and international journals).

To make it easier for the author, technically the author can use this template in full. The author can adjust the entire content of the article with this template (overwritten) section by section, so overall it is hoped that the article submitted is in accordance with the expected guidelines. We recommend deleting as needed, to avoid mistakes in other parts.

METHOD

The research method used in problem solving includes analytical methods. Picture captions are placed as part of the picture title (figure caption) not part of the picture. The methods used in completing the research are listed in this section.

In Research Methods, small and non-mainstream tools (which are common in the lab, such as scissors, measuring cups, pencils) do not need to be written down, but only the main set of equipment, or the main tools used for analysis and/or or characterization, even need to get to the type and accuracy; Completely write down the research location, the number of respondents, how to process the results of observations or interviews or questionnaires, how to measure performance benchmarks; The general method does not need to be written in

detail, but it is enough to refer to the reference book. The experimental procedure must be written in the form of a news sentence, not a command sentence.

RESULT AND DISCUSSION

The results and discussion contain the results of research findings and scientific discussions. Write down scientific findings (scientific finding) obtained from the results of research that has been done but must be supported by adequate data. The scientific findings referred to here are not data obtained from research results. These scientific findings must be explained scientifically including: What are the scientific findings obtained? Why did that happen? Why such a variable trend? All these questions must be explained scientifically, not only descriptively, if necessary supported by adequate scientific basis phenomena. In addition, it must also explain its comparison with the results of other researchers on almost the same topic.

Manuscripts can be written in Indonesian or English with a maximum number of 20 pages including pictures and tables. Manuscripts must be written according to this article template in a ready-to-print form (Camera ready). Articles must be written in A4 (210 x 297 mm) writing area and formatted with a left margin of 3 cm, a right margin of 3 cm, a bottom margin of 3 cm, and a top margin of 3 cm. Manuscripts must be written in Times New Roman typeface with a font size of 12 pt, one spaced apart, and in one column format (except for the article title, author's name, and abstract). The distance between the columns is 1 cm.

Foreign words or terms are used in italics (Italic). It is better to avoid using foreign terms for articles in Indonesian. The new paragraph starts 1.15 cm from the left border, while between paragraphs there is no space between.

Tables and Figures are placed in the text group after the table or figure is referenced. Each picture must be given a picture title (Figure Caption) at the bottom of the picture and numbered sequentially followed by the picture title. Each table must be given a table title (Table Caption) and numbered sequentially at the top of the table followed by the table title. Images must be guaranteed to be printed clearly (font size, resolution and line size must be sure printed clearly). Figures and tables and diagrams/schematics should be placed in columns between groups of text or if they are too large they should be placed in the center of the page. Tables may not contain vertical lines, while horizontal lines are allowed but only those that are essential.

The use of tables and figures should be mentioned in the text by mentioning table 1; picture 1 and so on (11 pt Times New Roman)

Table 1 Write a description of the table

Note.	Note.	Note.
entry 1	Data	Data
entry 2	Data	Data

Figure 1 Write a description of the image

When using a mathematical format it can be written as below:

$$n = a + b$$

The explanation of the formula can be written here

An example of a direct quote is as follows:

Explanation of the quote can be written here.

Conclusions describe the answers to hypotheses and/or research objectives or scientific findings obtained. The conclusion does not contain a repetition of the results and discussion, but rather a summary of the findings as expected in the objectives or hypotheses. If necessary, at the end of the conclusion can also be written things that will be done related to the next idea of the research.

All references referred to in the text of the article must be listed in the bibliography section. The bibliography must contain reference libraries originating from primary sources (scientific journals and amounting to a minimum of 80% of the total bibliography) published in the last 5 (five) years. Each article contains at least 15 (ten) bibliographies of references. Writing a reference system in article texts and writing bibliographies should use a reference management application program, for example: Mendeley, EndNote, Reference Manager or Zotero. Reference writing using the system model of the APA (American Psychological Association), 6th edition.).
