Abstract [Times New Roman 12, bold, centred]

Keywords:
[Times New Roman 11, bold, italic]

English language education, higher education, curriculum, pedagogic discourse [Times New Roman 11, italic]

The article addresses the development of English language education (ELE) and explores perspectives to develop better English learning climates in the higher education settings in Indonesia. It firstly outlines the development of ELE theories worldwide influenced by the growth of constructivism theory. Then, it particularly views the relationship between the development of ELE theories worldwide and the reality of English language policy within the Indonesian context. It is to argue that the national policy and its implementation have been somewhat inferior to providing strong fundamentals for ELE in the higher level of education—the higher education. Thus, this article proposes ideas to develop curriculum, pedagogy, and assessment in a coherent manner to create more engaging learning environment in order to cater for dynamic growth of academic and professional contexts.
