KEEP LOOKING UP

Your Newest Astronomy News

Well, my fellow friends of all things Galactic, it is hard to believe that the first quarter is half over already. It feels as though we only began the year a couple of weeks ago. We would like to report to you on four very special Astronomy students from this year who are working on a very unique project for the class. Pictured below are Symone G., Mary Elizabeth C., Rashad T., and Caroline C.. They are investigating a referenced star point in the constellation Camelopardalis. The star point in this circumpolar constellation will play an important role in our Annual Astronomy Night this winter. The research they are doing is far above and beyond what is required of the class and we want to recognize them for their assistance. Thank You guys! Keep Looking Up!
