

Interactive lessons with ClassKick

Are you looking for a web tool that allows ease of use, activities with manipulative movement, instant feedback, audio comments, peer interaction, and so much more (oh, and that works on ANY device?)? Of course, you are! [ClassKick](#) is a great web or app-based tool that does this at ALL levels! Yes, 4-year-olds to high school students can use ClassKick! It is really a cool activity creator! Teachers can create interactive activities and watch students work on the screen and interact with them (no, I do not encourage just sitting at your desk drinking coffee while watching kids digitally, but ClassKick does allow teachers to view students' work in real-time on their screen). There is live feedback, availability of peer help, audio notes, and responses, sharing created assignments with peer teachers to copy, and so much more. Head over to [ClassKick](#) (on the [web](#) or [iOS app](#)) and check it out! You will become a fan, too!

Set Up Your Class:

1. Sign in (or create) your account.
2. Click on "**Roster**" on the left and the "+" button on the right and choose "**New Roster**".

3. Name your class, chose a color, and add students (*you really don't need to add students as they will sign in each time they go to an activity*).

Create Assignments:

1. Click on “**Assignments**” on the left and then the “+” button on the right and choose one of the following (there will be some premade ones on your screen already. You can click the trash can to the right to remove them if you want them gone):

- **New Blank Assignment:** *blank slides for you to create on your own*
 - **Create from File:** *upload an image or PDF as an assignment*
 - **Browse Assignment Library:** *use already created assignments*
2. Once you choose your assignment type you will name it, write a description, choose a subject, and a grade. You can be as basic or detailed as you wish.

3. Then you can edit the slides your students will interact with. This is where it gets AWESOME! Here are your options (*I am not explaining the PRO options, only FREE*):
 - **Pen:** *draw squiggly lines or anything on the screen*
 - **Eraser:** *delete all those pesky mistakes we all make*
 - **Text Box:** *type text (captions, instructions, details, anything)*
 - **Line:** *draw straight lines*
 - **Web Link:** *insert a link to a web page*
 - **Image:** *insert an image or PDF already on your device*
 - **Audio:** *record your voice and drag it to any location on the screen*
 - **Manipulative:** *upload images to be moved around by students*
 - **Fill in the Blank:** *insert a box that has “acceptable answers” to self-grade*
 - **Sticker:** *add a sticker with preset comments*
 - **Background:** *choose a color or pattern for the slide background*
4. Create as many slides as you want. Think of slides as individual questions and workspaces for your students to draw, type, create, or annotate.

Assign Assignment:

1. You have created your activity and now you need to get it to your students. Click on the assignment you want to send and the 3 dots to the right. Then choose “**Assign**”.

2. You will be asked to choose a roster (class) to assign this to.

3. You can also do this while editing the assignment at the bottom.

4. You will get a class code. All you have to do is share this with your students (or post the link in Google Classroom).

5. They will go to the link and sign in with their name.

6. You can watch their activity, give feedback, and answer live questions by clicking on “**Assignment**” and then “**View Student Work**”. Here you will see live activities and what students are actively doing. They can “Raise their hand” for questions and add any of the items you choose when you created the assignment (text box, audio, lines, etc.).

7. You can score individual slides and give feedback in the form of audio, text, or even stickers. Students will see this in their slides as you do it! This is Super COOL!
