bv NEW VISIONS

Subject	Title	Session Descriptions
Math	The Math Team Advantage: Team Coaching and Partnership	Making sense of a new curriculum? Deepening implementation with integrity? Pursuing better student results? Whatever your challenge, you're not alone! In this session, experience how team coaching leverages the collective experiences, ideas, and expertise of a group using data to move through challenges together.
Biology and Earth & Space	New Curriculum, No Problem: Coaching That's Got Your Back	So you're implementing a new curriculum—but making it work in your classroom is a whole different story. In this session, experience how supportive coaching can help you teach with confidence, focus on what matters, and actually enjoy the shift.
	Will this be on the Regents?	Spoiler alert: Yes! In this hands-on session, you'll dig into assessment tasks, experience how they connect to the curriculum, and see how coaching can help teachers feel confident that what they're teaching will truly set students up for success on the Regents.
US History	Through the Magnifying Glass: Zooming In on Social Studies Visuals	Do you wish your students could truly see the full picture within a visual source - like the characters in a painting, the details in a photograph, or the satire in a political cartoon? Well, dust off your magnifying glass and join us in discovering the Zoom In instructional routine! We'll explore how to guide students through visual analysis, fostering their ability to observe and reflect.
Global History	Making Connections: The Cause & Effect Chain	In history class, students are the storytellers, weaving the details of the past into a captivating narrative sequence. Join us for an exploration of the Cause and Effect Chain, a hands-on instructional routine for helping students understand the interconnectedness of history. This session will equip you with the tools to guide students in tracing the ripple effect of historical developments, fostering critical thinking and analytical skills.
Literacy	Navigating Your Literacy Landscape: An Introduction to Literacy Systems	Foundational reading skills are the key to thriving across all subjects—but too many students in grades 6–12 struggle to access grade-level texts independently. Discover how smart data systems can empower your school community to support developing readers and experience what effective, engaging foundational reading instruction can look like in middle and high school classrooms.
Multilingual Learners	Multilingual Learner (ML) Independence in the Core	Content area teachers, join us to learn the most effective methods for supporting your MLs to understand complex texts better, to learn more, and to gain independence! This metacognitive-based model supports all students to notice, value, and trust their thinking. Come and see how we empower students to build new knowledge and increase learner independence!

July 14 Schedule

	Option A	Option B	Option C
9:00-9:30	Light Breakfast and Coffee		
Session 1	The Math Team Advantage: Team Coaching & Partnership	New Curriculum, No Problem: Coaching That's Got Your Back - <i>Biology</i>	Multilingual Learner Independence in the Core
