INTRODUCTION (10pt)

Manuscripts are written in Times New Roman in either British or American English. Authors can use A4 paper for the layout, ensuring it has a top-bottom margin of 3.5 cm, a right-left margin of 2 cm, 10 pt, and a 1.5 space density. The author must submit the manuscript as a typed file in Microsoft Word, using the provided template. The OJS JITEK (Jurnal Ilmu dan Teknologi Kesehatan) receives typed manuscripts via the URL link : https://ejurnal.poltekkesjakarta3.ac.id/index.php/jitek/

Although there is no restriction on the number of paragraphs, the contents must contain the background information, the research's goal, its position concerning earlier research endeavors, and the novelty of the research activities conducted. Creating a distinct sub-chapter for a brief theoretical underpinning directly relevant to the article's content is not necessary. The sentence concludes with citations numbered sequentially in the text's order, without any brackets, for example, Text1, Text2, Text3, and Text4-6.

METHODS (10pt)

The approach includes the design, size, criteria, sample technique, tools used, and methods for data collection, processing, and analysis. When using a questionnaire as a tool, briefly describe its contents and the factors it aims to measure. Instrument validity and reliability should also be described. Interventional procedures or treatments are administered in experimental or intervention investigations that require explanation. This section should detail the protection of respondents' rights and the acquisition of ethical approval for the study. It is not necessary to write down the specifics of the software if it is not original while analyzing data with computer programs. The location of the study is solely relevant to the study itself. If only as a study site, the specifics of the location are not important and are just given in general terms, such as "... at a hospital in Jakarta." For the qualitative research, please explain how the study maintains the validity (trustworthiness) of the data obtained.

RESULTS AND DISCUSSION (10pt)

The results and discussion at least contain three things, namely: (1) description, (2) interpretation (explanation) of the results of research activities and (3) discussion (comparative) results compared with the results of previous research activities. The results and discussion section is a unit containing an explanation of the results of the analysis related to the objectives. Each research result is directly discussed. The discussion contains the meaning of research results which include facts, theories and opinions. Tables, pictures, or illustrations are written according to the serial number of appearance in the text and given a short title (the title of the table or picture is 10 pt), long exposure to results and discussion of 50-60% of articles, and maximum table is 7 . The font size in the table can be reduced up to 10pt font and 1 space density.

Example:

Table 1. Respondent characteristic……...(10pt)

Variable	Frequency (n)	Percentage (%)
x	10	11,1
y	30	33,3
z	50	55,6

CONCLUSION (10pt)

Conclusions made in one paragraph without citation contain final conclusions and suggestions for further research activities.

ACKNOWLEDGEMENT (10pt)

Contains information of gratitude and appreciation to parties who have participated in the research activities carried out. Can the institutions providing the budget and grants (include the sources and schemes of grants used), the institutions where the research activities are carried out, resource persons, organizations and elements of society, and academicians who have helped carry out research activities.

REFERENCES (10pt)

The references used as much as possible are the latest references published in the last **five** years (minimum **75%** of at least **15** references). The bibliography is written in chronological order with the serial number **(*Vancouver System*)** and is recommended to use reference management applications such as EndNote, Mendeley, Zotero, and other applications.
