<u>Introduction</u> -grabbing lead - state main idea & preview structures	Jump jump it's a kangaroo jumping around the pond. Have you ever seen a kangaroo jump so high? They could land in a tree that's 78 feet . The kangaroo is a fascinating and mind blowing animal with many kinds of physical features that function to help this kind of special animal survive in its environment.
<u>Body Paragraph</u> - main idea sentence -structure and how it functions -explain/site -structure and how it functions -explain/site -structure and how it functions -explain/site	The kangaroo has many external structures that allow them to thrive and survive in the wild. For example, the kangaroo has strong legs and can jump really high. Their legs help them jump away from predators . Kangaroos also have pouches. Their pouches help them by protecting their baby. Without these fiscal structures, it would be hard for the kangaroo to survive in the wild. As you can see, their legs and pouch are the most important body parts.
<u>Conclusion</u> - restate main idea and -wrap it up	Most people will agree that kangaroos are fascinating animals. Their Strong external structures show just how amazing they are. Kangaroo are fasanating animals.
