

Meta Description: Amidst being listed on CoinMarketCap, PropiChain investors anticipate 8000+ gains as the third Presale stage approaches.

KWs: Crypto Presale, Crypto

PropiChain's Crypto Presale Moving Fast to Stage 3, Early Investors Can Still Unlock 8000x Gains

It is unsurprising that the recent upswings in the Crypto world are spreading toward most tokens as they lean toward bullish trends. The interesting aspect is that PCHAIN, a coin that is currently at the stage 2 Presale, is continually gaining traction amongst key investors in the industry. Here's why many traders are getting whitelisted on this project in anticipation of gaining up to 8000x returns.

PropiChain and the Revolutionary Dream Of Tokenizing the \$300T Sector

[PropiChain](#) is a decentralized marketplace that aims to ease the buying, selling, and trading of assets. It tokenizes the assets using blockchain technology to achieve its vision. Tokenization of the real estate industry is totally new to the Crypto space, and it comes with mouth-watering benefits.

With properties now in the form of digital tokens, people can now gain easy access to the \$300 trillion marketplace. This is because most of the barriers would be gone or drastically reduced. Safety will improve as the market remains transparent, and investment will be better within the more liquid setting this decentralized platform creates.

The incredible change PCHAIN brings to the market makes many investors start getting as much as possible from the 1.5 Billion tokens in supply. With the crypto presale still in the second stage at \$0.011, being whitelisted could return more than 8000% ROI when it eventually goes online. It is listed on the [Coinmarketcap](#) despite still being the presale round 2.

Features and Tools PropiChain Uses in Improving Real Estate

The incredible change PropiChain brings to the RWA market won't come from thin air. They are triggered by some features the marketplace brings to the industry. They are:

Fractional Ownership of Properties

The first benefit investors derived from the tokenization of the marketplace is free access to the sector. Recall the huge capital requirements, large upfront for mortgage, large paperwork, and

others that often restrict participation in the industry. Only the wealthy can afford the properties and the financial cost they bring.

However, with the assets divided into digital fractions, ownership can start at as low as \$50. You don't have to be surprised; investors only buy the percentage they want and process the payment via [PCHAIN](#). All deals are stored on the "Title Contract" which users can use as collateral just like the regular title deeds.

AI-Enhanced Property Investment

Artificial Intelligence has increased the efficiency and convenience in the RWA market. Before PropiChain, realtors and agents help search for suitable assets, assist in inspection, and handle complex calculations and analysis. These are extra costs for investors, and this doesn't eliminate human errors completely.

PCHAIN's emergence delegates all these activities to AI, which improves efficiency and comfort. You can now filter for suitable properties with advanced criteria, resulting in matching recommendations. Property inspections are also conducted remotely via the Metaverse space, and AI supports your tour with the necessary information.

Investors don't have to worry about overpaying for properties because [PCHAIN](#) AI uses the Automated Valuation Model to determine the actual cost of assets. The real-time information On the blockchain makes the calculation possible and accurate. The extra costs of hiring middlemen and traveling for inspection, along with the stress involved, are avoided.

Auto Lease and Rental Renewal

Tenants can benefit from automatic rental payment and lease arrangements on this PropiChain decentralized platform. Lease arrangement and renewal on this marketplace can be programmed using blockchain technology.

Programming renewals based on a condition saves the time, cost, and stress of doing it in person or via agencies. Blockchain triggers payment through your PCHAIN balance once an agreed term is fulfilled. This also applies to rental payments for homes and shops.

Improved Security

Falsified documents and other fraudulent activities related to real estate were eliminated in the PCHAIN's real estate era. All transactions are stored on the tamper-proof blockchain platform, which is open to all. A favorable report from [BlockAudit's review](#) is one of the testaments of its genuineness.

The transparency makes it difficult to falsify information about the properties traded on the platform. Also, there is no need for intermediaries, and the chances of meeting fraudulent ones are removed.

Get Whitelisted and Avoid Missing Out on the 8000% Returns

The best time to get your PCHAIN is during the first presale round, but the second best time is now. The token is worth \$0.011 at this phase, a bargain price for a highly promising coin. With just 45% of the 1.5 billion volume in supply to investors, you don't need to wait till it hits the 3rd phase. Despite the recent high whitelisting rate, there is still room for you to invest now.
