

DISCLAIMER

This document is intended to help our community and people interested in PRPS with beginner-friendly information. This is not an official FAQ, but instead made by the community itself. This document does not give any trading advice. The correctness of the information provided in here is not guaranteed. We are not responsible for any loss of crypto or other (non-)valuables that might incur by following this guide, especially not if you incorrectly follow the instructions.

Never give your mnemonic seed (12 word seed) or your private key to anyone! Mods will never ask you for it! Do not offer or accept offers of privately trading crypto; use the exchange to avoid getting scammed.

Check out the PRPS subreddit: <https://www.reddit.com/r/PRPS>

Join the PRPS discord and get help in #communitysupport: <https://discord.gg/q2CEKkr>

Link to this FAQ (anyone can view): <https://goo.gl/4NqwRq>

Do not whisper random mods on the stream unless it's asked for. They are usually people from the crew that are never online and don't answer questions. Use this FAQ and if required the twitch chat and discord #communitysupport channel as well as the resources above to find answers. Mods will contact you directly if for any reason necessary. Always check if somebody is a mod by typing "/mods" in the AtheneLive twitch chat.

! Warning !

We are UNABLE to recover lost private keys or lost 12 word seeds. Do NOT, we repeat, DO NOT lose or share your secret 12 word seed with anyone!

General information

What is PRPS? What is DUBI?

PRPS = Purpose

DUBI = Decentralized Universal Basic Income

Both are cryptocurrencies created by Athene; to be exact ERC-20 Tokens on the Ethereum Blockchain. They are utility tokens with the long-term goal to bring universal basic income to every person on this planet.

Token contract address for verification (double check with <https://www.prps.io/>):

PRPS: 0xb628Bc994e39CE264ECa6f6EE1620909816A9F12

DUBI: 0xF3D6Af45C6dFeC43216CC3347Ea91fEfBa0849D1

Only these two addresses above are the real PRPS & DUBI which are supported by the crew and what this document is about. Be aware of fake coins!

Old contract addresses - these are no longer supported!

PRPS: 0xE40C374d8805b1dD58CDcEFf998A2F6920Cb52FD or

0x7641b2Ca9DDD58adDf6e3381c1F994Aac5f1A32f or

0xd94F2778e2B3913C53637Ae60647598bE588c570

DUBI: 0xE7fEA78C393cF7B17B152A8c2D0CD97aC31790B or

0xD4Cffef10F60eCA581b5E1146B5Aca4194a4C3b or

0x9c6Fa42209169bCeA032e401188a6fc3e9C9f59c

Updates to PRPS / DUBI in September 2018

PRPS and DUBI have been forked and owners received the new forked tokens to their address. PRPS was sent out unlocked so it can be locked right away again. DUBI also was forked and sent out.

To give a very simple example:

- Suppose you had 100 PRPS, which you had locked for 12 months, earning you 4 DUBI
→ meaning you had 100 PRPS locked and 4 liquid DUBI on the wallet
- The fork was both for PRPS & DUBI, so you got NEW:
→ 100 forked PRPS unlocked on your wallet & 4 DUBI unlocked on the wallet
- You can now lock your 100 newly forked PRPS again for 12 months, meaning you will then have 8 forked liquid DUBI on your wallet

Of course if you didn't have any DUBI before the fork and didn't lock your PRPS, you didn't get any forked or extra DUBI. You will now just have the same amount of forked PRPS unlocked and can lock it for forked DUBI.

25. September 2018:

- fork was completed; every has been sent their forked PRPS & DUBI
- DubiEx fully functional again; allowing users to lock their newly forked PRPS conveniently directly on the site

"DubiEx is back up and the fork is pretty much done, save for some previous DubiEx orders that are still being sorted out. So everyone has the new PRPS and DUBI now in the same amounts as you had the old. If you had PRPS hodl'd before, you now have it back unlocked. This means you can hodl it already again at <https://dubiex.com/> and get DUBI again as well on top of the DUBI you already had (as both PRPS and DUBI were completely and equally forked this time)."

For a guide on how to lock your new PRPS fast and conveniently, see section "[Lock PRPS on DubiEx](#)".

Updates to PRPS / DUBI in February-March 2018

Before starting with this chapter we want to repeat again the FAQ intro: The following is not official nor guaranteed to be correct. We do our best to inform the community and people out of the loop with all necessary information, but some details might be missing or wrong.

Overview

In march 2018 there were multiple changes made to PRPS/DUBI. In this chapter we decided to only list the final changes and try to explain who is impacted and to which extent. For more details please ask on stream (twitch.tv/athenelive) or check out the various reddit posts on [/r/prps](#).

- The PRPS supply wall & DUBI buy wall was lowered on the 13th of March (block nr: 5249244) to 2 USD which allows the system to be self-supportive and stay up for at least 10 years - even if every PRPS/DUBI holder would sell. The updated roadmap can be found here: <https://goo.gl/duxNyZ>
- None of the changes should make people lose money, so an airdrop was deployed on the 21st of march for the following cases:

- If you bought PRPS on the exchange and didn't sell it before block nr 5249244 you got 124x PRPS (so in total you have now 125x)
 - If you bought PRPS on the exchange and hodled (locked) it yourself before block nr 5249244 you also got 124x PRPS (so in total you have now 125x)
 - Any PRPS that was bought after block nr 5249244 is not getting multiplied as the PRPS price was already lowered.
- On top of the airdrop, PRPS and DUBI will be forked at some point in May to make it future-proof. That means:
 - You donated to Athenelive and got rewarded PRPS that was locked for you: You will likely receive the same amount on the new forked version. It will probably be sent as unlocked PRPS so you can decide if you want to lock it to get forked DUBI or not.
 - You bought PRPS on the exchange and kept it (locked or not): You will probably receive the same amount on the new forked version. It will probably be sent as unlocked PRPS so you can decide if you want to lock it to get forked DUBI or not.
 - Your old DUBI won't grant new forked DUBI, as PRPS is sent out unlocked and else people could exploit the system by locking their PRPS and receive double. Also the way DUBI works is it's being created by locking PRPS, so only forked PRPS can create forked DUBI - and old PRPS keeps creating old DUBI.
 - Any PRPS you sold before the fork will not grant new forked PRPS, as the PRPS has to be in your wallet at the time of the fork to award forked PRPS.
 - There are other scenarios that might make current PRPS holders not eligible for forked PRPS, such as, but not limited to: having requested their initial donation to AtheneLive back or not being eligible to request a donation refund.
- ~~● Anyone who wishes to no longer support the project's long term goal of Universal Basic Income and wants to nullify the value of their PRPS/DUBI may fill in this google form <https://goo.gl/forms/E5D7MgH2fl1RT5zn1> for a potential refund of donations made through AtheneLive's G2A checkout, direct PayPal transfer or wire transfer between 10/13/2017 and 1/12/2018, to be returned in form of ether.~~
 - ~~○ This option is not available to users who have donated to SaveTheChildren or sold into the buywall and got compensated that way already.~~
 - ~~→ Example: If you donated to Athenelive, but sold all your Dubi or at least as much to get back the amount of your initial donation, you are not eligible to request a potential refund.~~
- Refunds can only be requested **until 30-04-2018 (end of April)**, after which all requests will be processed. Form responses or emails sent in after this date cannot be taken into consideration any more.

What does this mean for PRPS/DUBI holders? Case examples

Requesting a refund for donations towards AtheneLive

- The amount I donated went fully or partially to SaveTheChildren.
→ Donations to charity are non-refundable. You can only request a potential refund of donations directly towards AtheneLive.
- I have not sold any DUBI at all on the exchanges, but want a refund.
→ ~~You need to fill out this form:~~ <https://goo.gl/forms/E5D7MgH2f11RT5zn1>
Doing so will make you non-eligible to receive forked PRPS, nullifying the value of your current PRPS & DUBI. Please note that you still need to fill out the form, even if you have already contacted support about this prior to seeing the form.
Refund period has ended. Please contact support@gamingforgood.net if you have further questions.
- I have sold DUBI but the amount I received by doing so is smaller than the amount I initially donated and now I want a refund.
→ ~~You need to fill out this form:~~ <https://goo.gl/forms/E5D7MgH2f11RT5zn1>
Doing so will make you non-eligible to receive forked PRPS, nullifying the value of your current PRPS & DUBI. You can only request a refund for the difference in donation amount, which you have not yet made back by selling your DUBI. Please note that you still need to fill out the form, even if you have already contacted support about this prior to seeing the form.
Refund period has ended. Please contact support@gamingforgood.net if you have further questions.
- I have sold DUBI and by doing so have made my initial donation money (or more) back.
→ You are not eligible to request a refund as you have already gotten your donation money back.
- Note: There is no difference between selling DUBI into the buywall or to any other offers on the exchange / through any other means. Hence if you got reimbursed through any means for DUBI that you received from locking the PRPS gifted via the stream, you might not be eligible for forked PRPS and/or a donation refund.

I bought PRPS on the Exchange

- Bought before 13.03.18
→ You have received 124x the amount of PRPS you have bought onto your wallet via the airdrop on 21.03.18, which made sure you had a total of 125x and did not lose any money because of PRPS dropping in value.
If you believe there was any mistake with the airdrop please check the rest of this FAQ chapter to make sure you know how everything works and check the Token Transfers tab on your EtherScan wallet address to see if you have maybe missed any incoming transactions. Only personal wallet addresses can be airdropped, meaning if you had your PRPS stored on the exchange you need to withdraw it first.

Contact support at support@gamingforgood.net describing your issue and providing all necessary information such as wallet address, tx links etc if you still feel that something is wrong.

You will probably get forked PRPS for the full amount of PRPS that you still own in your wallet (locked or unlocked) when the fork happens.

- Bought after 13.03.18
→ You will probably get forked PRPS for the amount of PRPS that you bought and that is still in your wallet (locked or unlocked) when the fork happens.

I continue to support this project and hence do not want my donation to be refunded.

There is nothing you have to do. Check the pointers below for the most likely scenario of what will happen in your case. Thank you for your continuous support to this project's long-term goal of providing Universal Basic Income to the world.

- I have not sold any DUBI.
→ You will probably get the amount of PRPS you still have (locked or unlocked) in your wallet when the fork happens in forked PRPS to your wallet.
- I have sold DUBI but not enough to make my donated amount back.
→ You will probably get the difference in forked PRPS.
- I have sold enough or more DUBI to get my donated amount back.
→ You will not get any forked PRPS.
- Note: There is no difference between selling DUBI into the buywall or to any other offers on the exchange / through any other means. Meaning if you got reimbursed through any means for DUBI that you received from locking the PRPS gifted via the stream, you might not be eligible for forked PRPS.

What will happen to my old PRPS / DUBI?

After the hardfork your old PRPS/DUBI continues to exist (as it's crypto, it will stay in your wallet), but it won't be supported anymore by projects from the SingularityGroup or AtheneLive, as they will likely put all their efforts on the new forked PRPS and forked DUBI. To avoid any confusion the old PRPS/DUBI might not be officially listed on DubiEx.com anymore.

Fork block nr & about forked PRPS

Block Nr.: 5,533,030

If you did not receive forked PRPS but believe you should have received it (e.g. because you didn't sell any DUBI or did not get your donation back) fill out this form to request it:

<https://goo.gl/HrkDYy>

These are the new contract addresses - any other are not supported anymore!

PRPS: 0xb628Bc994e39CE264ECa6f6EE1620909816A9F12

DUBI: 0xF3D6Af45C6dFeC43216CC3347Ea91fEfBa0849D1

IMPORTANT: Safety & Privacy information

Foreword: It is very important to take this chapter serious. Carefully consider everything that is written here. It is not intended to scare you, but to inform you of the risks that come with greater wealth.

Please watch this VOD (minutes 39-57): <https://www.twitch.tv/videos/218893147?t=39m12s>

Do not trust random people contacting you - be it online or in real life - especially not if they pretend to be from the crew. Athene and people from the crew will NEVER ask you for your private key or 12 word seed and will NEVER ask you to send them crypto/money or anything. Don't accept offers from people to trade crypto privately with you - you are almost guaranteed to get scammed. Always look for information and answers to your questions in official sources and public sites, don't do something just because somebody told you to, before you did your research!

Be aware that if you show that you have more wealth, old friends and people around you will start to beg and get more and more greedy and might even turn dangerous.

It's best to have nobody know - not your parents nor your girlfriend or the government*.

*Obviously you need to inform yourself about the laws in your country regarding crypto and when and how you have to involve your government (for example regarding paying taxes etc.).

If you always wanted to ask a girl/boy out, now is the perfect time, because as soon as people know you are rich, you can't know anymore whom to trust and who really likes you - as fucked up as this might sound; it's the sad truth.

→ Do NOT, under NO circumstances tell people how much money you have!

Think about changing all your social media handles like twitter, skype, twitch and so on. Use a new mail if it's public. Change or delete anything that can be linked to your wealth and make you an easier target for criminals.

Obviously do NOT give away your 12 word seed or show where you hide it. Make sure to have backup copies in different secret places (see section below).

You can send your crypto tokens to other addresses and say you have given them away, donated them, sold them/lost everything when it crashed or even look into using "mixing services" that try to make it harder to track where your money goes - do your own research about this and think very well about this! We are not saying you should do this, we are just informing you here of possible choices.

Make sure to only use trusted sites when handling money. Watch out for wrong links and secure connections.

Examples of safe original sites:

<https://metamask.io/>

<https://www.myetherwallet.com/>

<https://www.ledgerwallet.com/>

<https://trezor.io/>

<https://dubiex.com/>

Here's a reddit post with some useful links for research:

https://www.reddit.com/r/PRPS/comments/7qt2ti/managing_your_money_knowledge_is_everything/

How do I keep my PRPS safe?

We highly advise you to do some research on how to handle crypto safely. Never forget that you are your own bank. **You** are responsible for your own money. **Nobody** will be able to help you if you lose access to your funds because you forgot your seed or shared it with others!

Here are some first pointers about storing your seed securely to get you started:

SAFE way of handling your 12 word seed

- Write it down (readable!) on a piece of paper
- Write it down again on at least a second paper (this is your backup)
- Store your main paper in a secret place where it won't get destroyed
 - good example: in a safe inside plastic foil
 - bad example: below the sink (paper can get wet)
- Store your backup paper at a DIFFERENT secret place where it won't get destroyed
- It is highly recommended to have more than 1 backup copy and to do at least 4 changes to your seed, so in case anyone finds it it is unlikely for them to be able to steal your funds. These changes can be swapping places of certain words or replacing a word with another word from the public list of mnemonic seed words. After you have done this and confirmed you can still access your wallet (know what you have changed) you should permanently destroy the original seed.

WARNING: If you forget the changes you have made you will lose everything!

NOT SAFE

Do NOT store your secret 12 word seed or private key in any of these or similar places:

- Online
- On your phone
- On your PC
- On your desk
- At your girlfriend's place (in the hopefully unlikely event of you breaking up she could steal all your funds)
- In public
- Anywhere where it can be seen and/or accessed by other people

What about my will? Where do my funds go if something happens to me?

Obviously you need to think about what you want to happen to your funds in the unlikely event of something happening to you. Although this applies to all your other possessions as well, with cryptocurrencies the case is a little bit different. Crypto can only be accessed with the private key or secret mnemonic seed. Not even the government can give your funds to your kids when you die if they don't have your secret key/seed. This does not mean that you should give it to anyone, but just that you should think about how you would want to have your wealth distributed and maybe already do your own research into options for this. If you have any good/trusted "services" (=code) please let the community know.

"How-to" step-by-step guides

How to add the new forked PRPS/DUBI token to MetaMask

1. Click the 'Tokens' tab in MetaMask and then click 'Add Token'
2. Fill in these three fields as follows:
Token Contract Address: 0xb628Bc994e39CE264ECa6f6EE1620909816A9F12
Token Symbol: PRPS
Decimals: 18
3. You can also add the DUBI token by clicking 'Add Token' again with the following data:
Token Contract Address: 0xF3D6Af45C6dFeC43216CC3347Ea91fEfBa0849D1
Token Symbol: DUBI
Decimals: 18

If this doesn't work it might be because of the Ethereum network being very slow due to huge amount of traffic. Please try again later.

You can double check the contract addresses here: <https://www.prps.io/>

How to change MetaMask password

1. Restore your 12 word seed following instructions at the very bottom at the explanation of 12 word seed.
2. Follow the instructions at the section "already have MetaMask wallet" to lock your wallet/log out.
3. Keep following the instructions, but enter the same seed again and choose a new password.

How do I check my hodl status?

Very simple: Just go to www.dubiex.com?hodl

Don't worry, losing your hodl ID doesn't mean you lost your locked purpose. You can see and unlock your locked purpose now even without the ID here: www.dubiex.com?hodl

1. Find your transaction id for when you hodl'd
2. Put your tx id into <https://etherscan.io/>
3. Scroll down to the "input data" field
4. Find the 3 digit string between the 0's on the second line
5. Type it into <https://www.binaryhexconverter.com/hex-to-decimal-converter>
6. Press convert to get your hodl id and use the instructions further above to check the status
7. For a screenshot of the process check this: <https://imgur.com/PSDP616>

~~As you can see in the screenshot line 0 is your address, line 1 is your hodl ID (in hexadecimal, convert it to number!), line 2 is your amount (in WEI, convert it to ETH) and line 3 is the amount of months your PRPS is hodl'd (in hexadecimal, convert it to number!).~~

[Convert To Ascii](#)

How to release prps (claim it back when it's unlocked)

New: Just go to: www.dubiex.com?hodl

Press the release button once the timer ran out. Metamask will automatically open so you can make the release transaction.

The next paragraph is for **old PRPS** only:

You can go to <https://www.myetherwallet.com/#contracts>. In contracts tab, You can see "address" and "ABI/JSON interface".

You need to put HODL address (0xe4D688Bb2d5B7F546052cB6Fef3aEd8af8AF6511) and the HODL ABI, which you can find here:

<https://etherscan.io/address/0x7aed8adb665d649cc83d8e002147cee65f88fb0#code> (ABI field)

Then you can call the contract's "release" function, with your HODL ID.

If you lost it, you can follow the steps here to get it back:

<https://docs.google.com/document/d/16mw-wD7QbUIYZIV665AzqdCGrZiRFwcT5Rfb5Wl4xYg/edit#heading=h.s6ecuccpaxvg>

Make sure that you are connected on the same address that you used to lock it when you call the smart contract.

Don't forget to submit the transaction in Metamask :)

If you have more questions, you can get help in the PRPS Discord: <https://discord.gg/qwJVsfT> in #communitysupport.

Lock PRPS on DubiEx (easy + fast)

Have your hardware wallet (ledger/trezor), your metamask password or you mnemonic seed (you will need to import it to metamask) ready as well as a tiny bit of ETH on your current wallet for the transaction fee. At the time of writing this document, 0.10\$ worth of ETH is more than enough.

1. Go to <https://dubiex.com?hodl>
→ alternatively go to <https://dubiex.com> and click "Hodl PRPS" in the top right corner
2. Click on "wallet" or in the top right corner on the button then on "Unlock wallet"
3. Choose your wallet type (for example: ledger) and read the instructions
4. Connect to your wallet
→ make sure to have "Browser support" & "Allow contract data" enabled (ledger only)
5. On the left side you will see your current amount of PRPS or DUBI on this wallet
6. Below, choose the amount of PRPS you want to lock (or click "MAX")
7. Reward shows you the amount of DUBI you will receive
8. Choose the duration of the hodl (3, 6 or 12 months)
9. Click "lock"
10. Confirm the transaction on your hardware wallet if necessary

11. That's it, very simple and conveniently fast! You will now see transaction pending and on the right when you can release your PRPS!
12. To release it simply come back to the page when the time is over and tap the "release" button.

You can of course always use the direct contract versions to lock (explained in the next two sections), however we do not recommend them as they are more complicated - all three methods do the same and are equally secure.

How to lock my PRPS? (MetaMask)

New: Forked PRPS has been sent **unlocked**, so even if your old PRPS was locked before, you need to lock the new PRPS **yourself**, if you want to do so. The crew does not lock the new forked PRPS for you, as they don't have access to it (it's on your wallet, only you have access to it). Follow the instructions below to lock your newly forked PRPS.

For even easier steps see section "[Lock PRPS on DubiEx](#)".

If you don't use MetaMask please check the [section further below](#).

For MetaMask users:

1. Make sure you have set up MetaMask and unlocked your account. (If you don't know how MetaMask works check the guide further up or google it.)
2. Make sure you have around 1\$ worth of ETH on the same wallet. You will need this ETH to pay the transaction fee for the hodling process. If you initially donated to the stream you might already have enough ETH on your account. Check your wallet balance after logging in to MetaMask, to see if you have ETH. If not, you need to first buy ETH.
3. Go to <https://dubiex.com?hodl>
4. Enter your PRPS amount, the desired time frame and press "LOCK". Metamask will open.
5. Go to <https://ethgasstation.info/> and choose an appropriate gas price in GWEI. Make sure it's between the "Gas Price Safe" and "Gas Price Std" at the top of the page. This gas price is transaction cost, you will need ETH for this. If you don't have ETH you need to buy it on an exchange and send it to the same MetaMask ETH wallet where your PRPS is stored. Make sure you set the gas price high enough or your transaction will fail and you will have to pay a small amount of ETH as gas for the failed transaction!
6. Make sure to double check everything. As soon as you accept the MetaMask transaction it will be locked and there is no going back. This is the only transaction you have to do to hodl.
7. On the right side you will be able to see how long your PRPS is still locked and you will be able to release it once the locking period is over.
- 8.
9. ~~Go to <https://www.prps.io/>~~
10. ~~Click on "PRPS" at the top and scroll down to the "hodler"~~
11. ~~Choose the amount of PRPS you want to lock and the duration (3, 6 or 12 months).~~

12. Click on "Hodl".
13. You will be prompted with modal where you can see all data that will be used to call smart contract. Take your time to read through everything and validate the information provided to you.
14. Write down your Hodl ID that you can see in the modal. You will later use it in the hodler to check status of your hodl. You will also see this id after you successfully hodl under the button.
15. If you are ready, click on Continue. Cancel if you don't want to lock yet.
16. A MetaMask pop-up will open to send the transaction and fulfill the hodl (lock your PRPS). If it doesn't open make sure you are logged into MetaMask.
17. Go to <https://ethgasstation.info/> and choose an appropriate gas price in GWEI. Make sure it's between the "Gas Price Safe" and "Gas Price Std" at the top of the page. This gas price is transaction cost, you will need ETH for this. If you don't have ETH you need to buy it on an exchange and send it to the same MetaMask ETH wallet where your PRPS is stored. Make sure you set the gas price high enough or your transaction will fail and you will lose the ETH you spent for it!
18. Make sure to double everything. As soon as you accept the MetaMask transaction it will be locked and there is no going back. This is the only transaction you have to do to hodl.
19. When you confirm your choice your PRPS will be sent away from your wallet to the hodl contract and locked there. You will not see it anymore in your token list. After the 12 months are over you will be able to "release" (instructions coming soon) your locked PRPS and it will be sent back to your wallet and you will see it again.
20. When you accept the hodl transaction you will also get your DUBI to the same ETH wallet where your PRPS is. Please be aware that depending on the volume of ETH transactions it can take some time for your DUBI to arrive. Just check the Transaction Link in your MetaMask to see if it was successful.

How to lock PRPS without MetaMask (advanced users only)

It is not necessary to use MetaMask and <https://www.prps.io/> to lock your PRPS, although it is way easier. If you want to lock your PRPS on a hardware (or any other wallet) it is a bit more complicated; and if you are unsure if you do it correctly it is recommended to double check the instructions, check the screenshots at the very bottom, ask the community for help and try with smaller amounts. At the bottom you will find screenshots of the process. Make sure to really double check the information provided below using the source links.

For even easier steps see section "[Lock PRPS on DubiEx](#)".

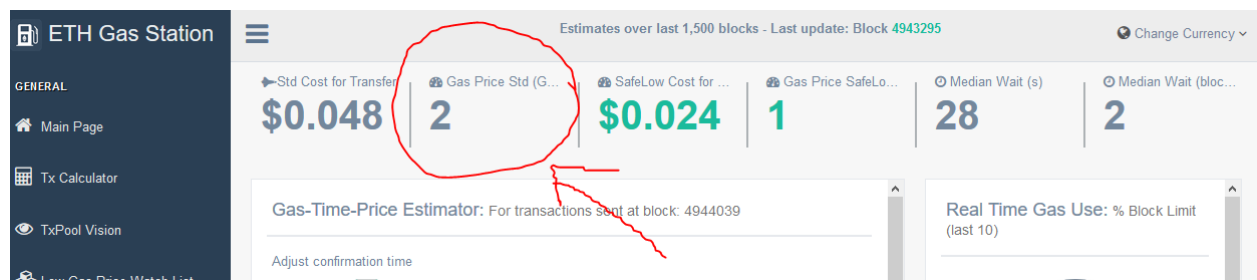

Follow these steps carefully:

1. Have your PRPS ready on a wallet of your choice (has to be the same wallet where you want your locked PRPS to be released on after 12 months and where you want to receive your DUBI!)

2. Make sure you have around 10\$ worth of ETH on the same wallet. You will need this ETH to pay the transaction fee for the hodling process. If you initially donated to the stream you might already have enough ETH on your account. Check your address for example on EtherScan to see if you have ETH, if not you need to first buy ETH.
3. Now head over to <https://ethgasstation.info/> to check the current gas price. You need to look at the value "Gas Price Std". Make sure to check this before you do the transaction as the gas price changes regularly.
4. Go to <https://www.myetherwallet.com/>
5. Double check the site (url & lock) if you are on the real site; it's best to bookmark it.
6. On the top right click on "Gas Price" and use the slider to choose a Gas Price that is 5 GWEI higher than what you saw on ETH-GasStation, but always use at least 10 GWEI!
Example #1: Gas Price on ETH-GasStation = 2 GWEI → choose 10 GWEI
Example #2: Gas Price on ETH-GasStation = 22 GWEI → choose 27 GWEI
7. Click on "Contracts" in the top bar
8. Enter the new Contract Address: 0xe4D688Bb2d5B7F546052cB6Fef3aEd8af8AF6511
9. Double check if the contract address is correct by going to the github and checking for "Hodler" here:
<https://github.com/nionis/purpose/blob/master/build/addresses-mainnet.json>
10. Close the Github window again.
11. Back on MyEtherWallet, to the right of where you have entered the contract address, there is a dropdown menu. Do NOT select an existing Contract. Just keep it like it is.
12. In the ABI/JSON Interface you need to paste everything inside and including the [square brackets] after "abi" : (line 3) and before the "," (comma) at line 181 from this code:
<https://github.com/nionis/purpose/blob/master/build/contracts/Hodler.json>
13. Close the Github window again.
14. Back on MyEtherWallet, below where you have entered the ABI, click "Access"
15. If you get an error double check that you have copied the correct code (see screenshots below).
16. At "Read/Write Contract" click on the "Select a function" dropdown menu and choose "hodl".
17. Go to <https://etherconverter.online/> and enter the amount of PRPS you want to lock into the "Ether" field. Now copy the amount in the "Wei" field.
18. Back on MyEtherWallet: In the "_id" field you can put any random number you like. This will be your hodl ID. Write it down to check your hodl status. You cannot use a hodl ID twice so if you want to hodl 2 amounts at the same time you need to enter a different ID.
19. The copied WEI amount from Etherconverter you now need to put into the "_value" field.
20. Make sure the copied Wei amount is correct, then close the etherconverter window.
21. In the "_months" field you need to enter the amount of months you want to hodl for. Remember you can only choose between: 3 months (= 1% DUBI), 6 months (= 2% DUBI) or 12 months (= 4% DUBI).
22. Now choose how you would like to access your wallet. In the screenshot example I am using the hardware wallet Ledger Nano S, therefore I choose "Ledger Wallet".

23. After making your choice read the instructions for your specific option and if necessary use the links to check the guides on how to use your wallet with MyEtherWallet.
Note for Ledger users: You need to enable “Browser Support” (yes) and “Contract Data” (yes) in your Ledger Ethereum Settings. Check guides on the official ledger website if you don’t know what this means.
Check this if you afterwards still have issues:
<https://myetherwallet.github.io/knowledge-base/hardware-wallets/ledger-hardware-wallet-unable-to-connect-on-myetherwallet.html>
24. During this process you might have to select the correct derivation path and address only our hardware wallet. If you have problems with this check the guides for your specific device.
25. After connecting your hardware wallet, there will be a new popup with “Warning!” at the top.
26. IMPORTANT: Do NOT change the “Amount to Send” in this pop-up! It HAS to be 0 (= zero)!
27. Also don’t change the Gas Limit unless it’s below 300’000 - then you have to put it to 300’000.
28. Click on “Generate Transaction”.
29. Verify the transaction on your hardware wallet device or by checking the “Raw” & “Signed Transaction” Data.
30. If you are sure everything is correct click on “Yes, I am sure! Make transaction”.
31. MyEtherWallet will now tell you with a green banner at the bottom that the locking was successful. Keep in mind that this is a smart contract and it can take some time for it to go through. Check the transaction link and your wallet address to see if you receive DUBI (which means the locking was a success).

Screenshots of the described process for your reference:

Section for users who earned PRPS by donating to the AtheneLive stream

Attention: People who bought their PRPS/DUBI from exchanges please skip this section!
This section is only for people who have donated in the past and earned PRPS. You cannot do this anymore (since around 13th January); this is also clearly shown when you try to donate.

Where can I claim my purpose?

Please contact G4G support if you haven't claimed yet. (support@gamingforgood.net)

~~Go here to claim your purpose: <https://purpose.gamingforgood.net/claim>~~

~~(This link will not work for people who never earned any PRPS by donating.)~~

~~You can also click the button in your G4G dashboard.~~

~~Make sure to follow the instructions precisely and carefully! Read everything written on the claim page!~~

~~When you have claimed check the instructions further below on how to receive your PRPS.~~

Do I need to claim my PRPS?

Yes if you got PRPS rewarded by donating to the stream, you need to claim your PRPS, no matter on which address you want it.

Is there a time limit to claim my purpose? What happens if I don't claim my purpose instantly?

There is no time limit to claim your purpose. You can claim your purpose whenever you want; it is no problem if you need a little bit more time.

As long as you make sure to keep your twitch account safe (use strong password & 2FA) your purpose will stay in your G4G dashboard and there is nothing to be worried about.

Please contact G4G support if you haven't claimed yet.

(support@gamingforgood.net)

I have less than or exactly 20 PRPS, how much taxes do I pay?

Everyone with less than 20 Purpose does not have to pay taxes (bug was fixed). You can just go to the claim site and claim your PRPS. (If you have exactly 20 PRPS you need to pay 1 PRPS tax!)

ATTENTION: When you claim now you will get a NEW seed! It's important to remember this

NEW seed! Everything else before does not count!

Everyone who has ALREADY claimed with less than 20 PRPS and paid too much tax got his taxes refunded by us. They have been added to your G4G dashboard counter and you will need to claim this refund again by clicking on the claim button.

→ In this case you will NOT get a new seed, the system will use the same address as last time you claimed. So make sure you do not forget the first seed from your earlier successful claim!

In both cases you need to please now follow the instructions further below.

I claimed, where is my purpose?

Don't worry, if you claimed already it is normal that your Purpose wont show up on your G4G dashboard anymore. Please check the instructions further below on how to get your PRPS the fastest. Also make sure you take your time to read through the rest of the FAQ and understand how everything works.

I confirmed my address after stream callout // I got told my PRPS/DUBI was sent -- but I didn't receive it, what now?

Transaction on the ethereum network can take quite some time to actually go through. Please have patience. In the very unlikely event that your transaction fails or gets stuck it will be resent. Every transaction will be manually double checked, there is nothing you have to worry about.

New: If you haven't claimed your PRPS yet, you will receive unlocked PRPS to your wallet. Please contact G4G support if you haven't claimed yet. (support@gamingforgood.net)

~~Remember that you WON'T SEE PRPS in your wallet! You will only actually be able to release it after 12 months (when it's finished locking). There will be instructions on how to "release" your PRPS after 1 year. It is a very easy process and only you can do it; nobody else can steal your funds. It is also no problem if you don't have time to release it right after 12 months; you can release it any time later too, it will stay safely locked until you have time. You will see your DUBI instantly when we lock your PRPS and the ETH that was sent to you for free will also be directly in your wallet.~~

What is the fastest way to get my PRPS/DUBI?

New: If you haven't claimed your PRPS yet, you will receive unlocked PRPS to your wallet. Please contact G4G support if you haven't claimed yet. (support@gamingforgood.net)

~~Purpose earned in the past on the Athene live stream will be locked for 12 months. This will be done by the crew; you don't have to do it yourself. If you have any questions regarding this or would not like this to be done for you, please contact: support@gamingforgood.net~~

~~IMPORTANT: Enable whispers!~~

TL:DR version: read FAQ → claim PRPS → send a mail to support@gamingforgood.net → confirm your address → your PRPS will be sent soon

1. Follow the instructions on the claim page and read this FAQ on how to store your seed safely. TAKE YOUR TIME FOR THIS!
2. Get your public wallet address ready. If you don't know what this is, read the bottom of the FAQ. This is where we will send your DUBI & locked PRPS to! Make sure again that you have your private key and/or 12 word seeds stored securely! Make sure that you are really logged in to MetaMask with the ETH wallet we have generated for you when you claimed your PRPS (check the section further down in the FAQ on how to change MetaMask accounts).
3. Make sure you don't have any other questions. If you have any questions about the claiming process read the whole FAQ. If you still have questions or something is unclear ask in discord; more people might have your question!
4. When you are ready send a mail to support@gamingforgood.net and say that you would like to receive your PRPS. You will get a response asap.
5. Sometimes you will also be contacted directly by Cassidy13K or maybe another AtheneLive mod via whisper. Use the command "/mods" (not "!mods") in twitch chat, to ensure the person you are talking to is a mod - don't trust non-mods!
6. The mod/mail will whisper you a public wallet address and amount. Double check that this address is the one you have in your MetaMask and that you have access to this wallet and have it's private seed stored securely. Your ETH address is not case sensitive, so caps don't matter! Make really sure this information is correct!
7. Confirm your address and amount to the mod OR say it if there is any issues.
8. BE REALLY SURE IT IS CORRECT. IF YOU CONFIRM A WRONG ADDRESS YOU WILL LOSE ALL YOUR PRPS. THERE IS NOTHING WE CAN DO ABOUT THAT ANYMORE AFTERWARDS! THERE IS NO ADDITIONAL CHECK!
9. If all went good your PRPS will soon be sent.

Please remember to not ask mods basic questions, they will most likely miss your whisper - check the FAQ and ask the community in discord instead to get a fast answer.

Site says my PRPS will be sent to an address but I never entered one! // Can I change this address? // Can I use an address I created myself?

TLDR: To offer the best user experience when claiming the site automatically generates a 12 word seed. (locally on your computer, using ethjs library verify [here](#)) The address connected to this seed will receive your Purpose. You can use your seed to unlock your wallet with MetaMask or MyEtherWallet for example.

When we send your PRPS we will also send some ETH so you can transfer your PRPS or DUBI and release your locked Purpose without having to worry about paying transaction fees.

If you want your PRPS to be sent to another address instead of the claim address pay attention to the stream and tell the mod that is called for. Check your G2A wallet email address (to know which email it is go to G4G dashboard --> payout tab), if you don't have access to it tell the mod.

The claim button is gone from the dashboard!

Please contact G4G support if you haven't claimed yet. (support@gamingforgood.net)

~~This is usually only the case if you either have already claimed your Purpose or had no Purpose at all.~~

~~But you can always go back to the claim site to see the Metamask instructions by clicking here:~~

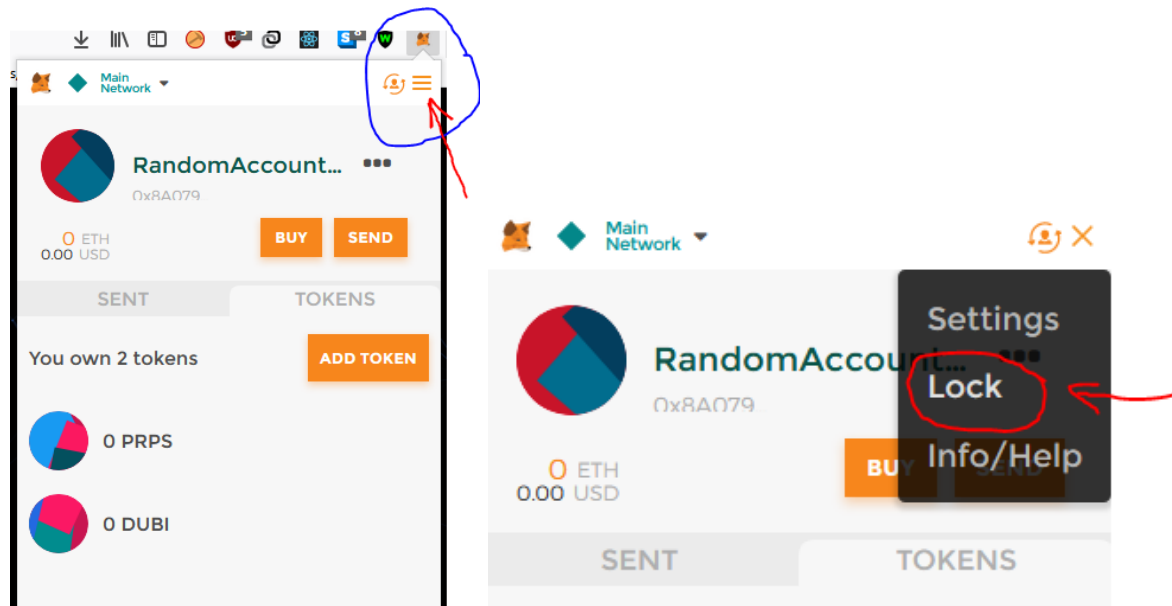

~~<https://purpose.gamingforgood.net/claim>~~

I already have a MetaMask account. Will the Purpose be sent there? // Change MetaMask password

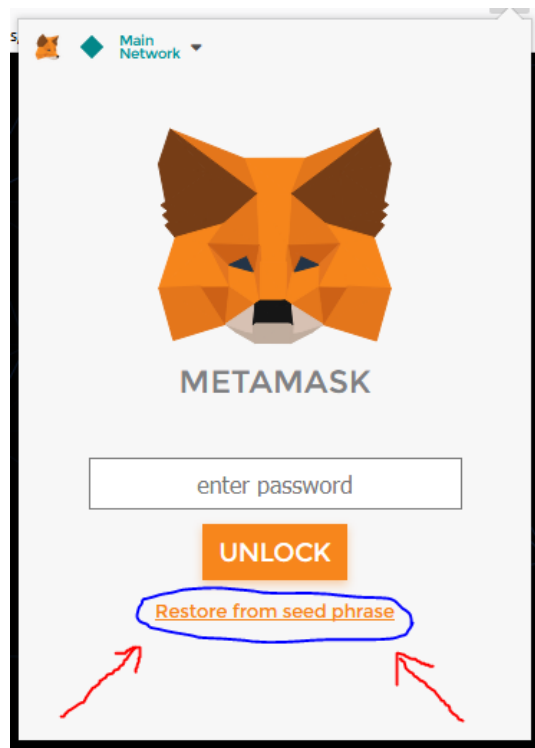

No unfortunately not. If you are already logged into an existing MetaMask account you need to log out and enter your 12 word seed from the claiming process to access your Purpose. The process described below can also be used to change your MetaMask password. Please follow these steps:

In the following steps we will explain how to import a seed into Metamask, replacing your old wallet. **Make sure you don't lose access to the funds of your old wallet, so please verify that you still have your old seed.** In case you lost it, check the MetaMask settings to display it again. It is generally highly recommended to keep your private keys or mnemonic seed/12 word seed safe & secret! See instructions at "common crypto terms: 12 word seed" on how to **restore your seed** from MetaMask.

Now that you secured access to your old wallet please continue importing your new seed. Click on "lock" in the top right corner; this will log you out from your current wallet/MetaMask account.

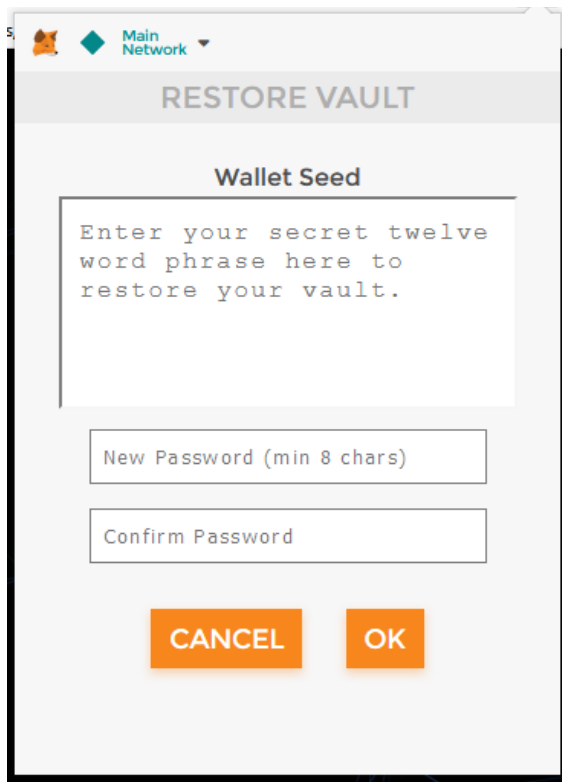

- click on "Restore from seed phrase" BELOW the unlock button

- now you can log in with your 12 word seed that you got when you claimed your PRPS (MetaMask calls it "twelve word phrase" instead of seed) and set a secure

password so you don't have to use your 12 word seed every time you log in.

Confirm Password

CANCEL OK

I cannot click on claim my purpose. // Error: pay taxes // MetaMask doesn't open.

Make sure you are logged into G4G and that your browser doesn't block session cookies.

Don't forget that it is necessary to donate at least 5% of your PRPS back on the AtheneLive page before you can claim your PRPS. Make sure it's really at least 5% - it won't work if you only donate 4.99999%!

(5-10% PRPS "taxes"; these are not official government taxes, we just call them taxes!)

Also remember that you cannot donate with \$! You need to use the green "donate purpose" button here:

<https://www.gamingforgood.net/s/athenelive>

For an explanation of why we ask this please check the VODs, ask in stream chat or contact support.

If MetaMask loads forever make sure to turn off any extensions that might block it like "comodo secure shopping".

My Question is not listed here

Please make sure to read the instructions carefully and ask in stream chat/discord. If you have any other issues you can contact us at: support@gamingforgood.net
Please be aware that contacting us multiple times is not going to speed up our reply times. We read every mail and ALWAYS reply as fast as possible. Thank you for your patience.

Section for getting PRPS/DUBI from exchanges

Where can I get or buy PRPS/DUBI?

DUBIEX IS NOW LIVE AND FULLY FUNCTIONAL WITH EASY & ADVANCED MODE!

[DubiEx](#) is a fully decentralized crypto Exchange without fees! This means you only have to pay gas for the transaction and you will always be in control of your own funds and wallet!

You can find it here: <https://dubiex.com>

- Trade DUBI for ETH here: <https://dubiex.com/DUBI/ETH>
- Trade PRPS for ETH here: <https://dubiex.com/PRPS/ETH>
- Check this guide for how to get ETH (you need it to buy PRPS/DUBI from exchanges): https://www.reddit.com/r/PRPS/comments/7qblb7/how_to_get_ether_with_no_or_low_fees/
- You can't buy PRPS/DUBI anymore from IDEX. You can still get it on EtherDelta if you want. Check the next section for information on those exchanges.
- You can't earn PRPS anymore through donating to the stream.
- Any other sources to get PRPS/DUBI are not official and have not been tested by the community. We highly suggest sticking to the sources we mention in this document and being especially careful if you still decide to try to get your crypto from another site or private person.

How do I know if I'm trading the new forked PRPS/DUBI?

To make sure you trade the correct version of DUBI or PRPS, we always advise to double check the contract address you are trading. Do not only look at the name.

On your first visit to DubiEx you will get a popup on both PRPS & DUBI sites to inform you about the fork and which is the newer and thus supported version of the currency.

I still have crypto on EtherDelta or IDEX, how can I get it out?

Whenever you are done with trading your crypto on an exchange (no matter if you bought or sold ETH/PRPS/DUBI), we encourage you to withdraw your funds from the exchange into your own ETH wallet which you have the private key or 12 word seeds to. We don't advise you to leave any funds on an exchange unless you intend to trade them right away. This does not apply to DubiEx as on DubiEx you never deposit your crypto onto the website, it always stays in your control.

If you still have crypto on **EtherDelta**, that you want to withdraw, you can use this guide:

https://www.reddit.com/r/EtherDelta/comments/6hrxjw/etherdelta_guides_for_first_time_users/

If you have PRPS Classic (old PRPS from before the fork) on EtherDelta:

<https://etherdelta.com/#0x7641b2ca9ddd58addf6e3381c1f994aac5f1a32f-ETH>

If you have DUBI Classic (old DUBI from before the fork) on EtherDelta:

<https://etherdelta.com/#0xd4cffeeef10f60eca581b5e1146b5aca4194a4c3b-ETH>

If you still have crypto on **IDEX** that you want to withdraw, you can use this guide:

<https://idex.market/guides>

Please make sure to cancel your open orders (idex.market/open) and withdraw (idex.market/balances) your crypto in **ONE** transaction each. In the case of DUBI and PRPS only you can also withdraw if you have less than the usual minimum of 40\$.

You can get help with IDEX on Telegram here: <https://t.me/joinchat/FT1IVA8AWHiyUkU3adehxA>

Common crypto terms

12 word seed / mnemonic phrase

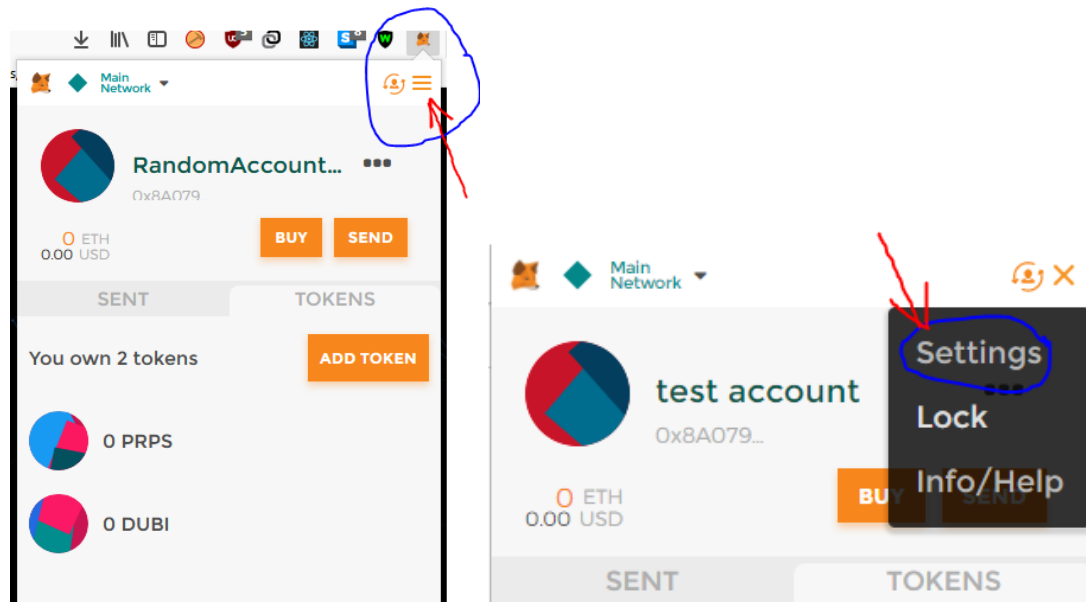

This is the 12 word long phrase you get generated when you claim your purpose on the claim website. Make sure to write down this seed and never show it to anyone. On sites like MyEtherWallet this is called "Mnemonic Phrase". **If you lose this seed you will permanently lose access to all your PRPS. This cannot be undone. We CANNOT recover lost seeds.**

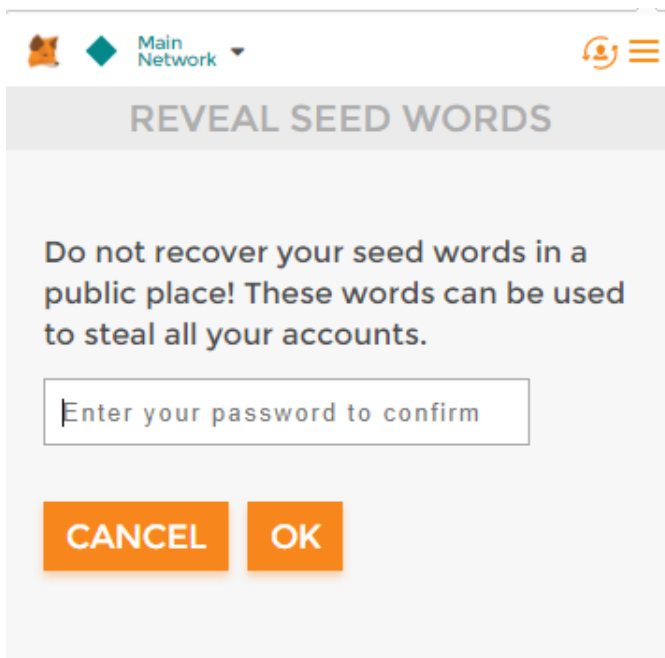

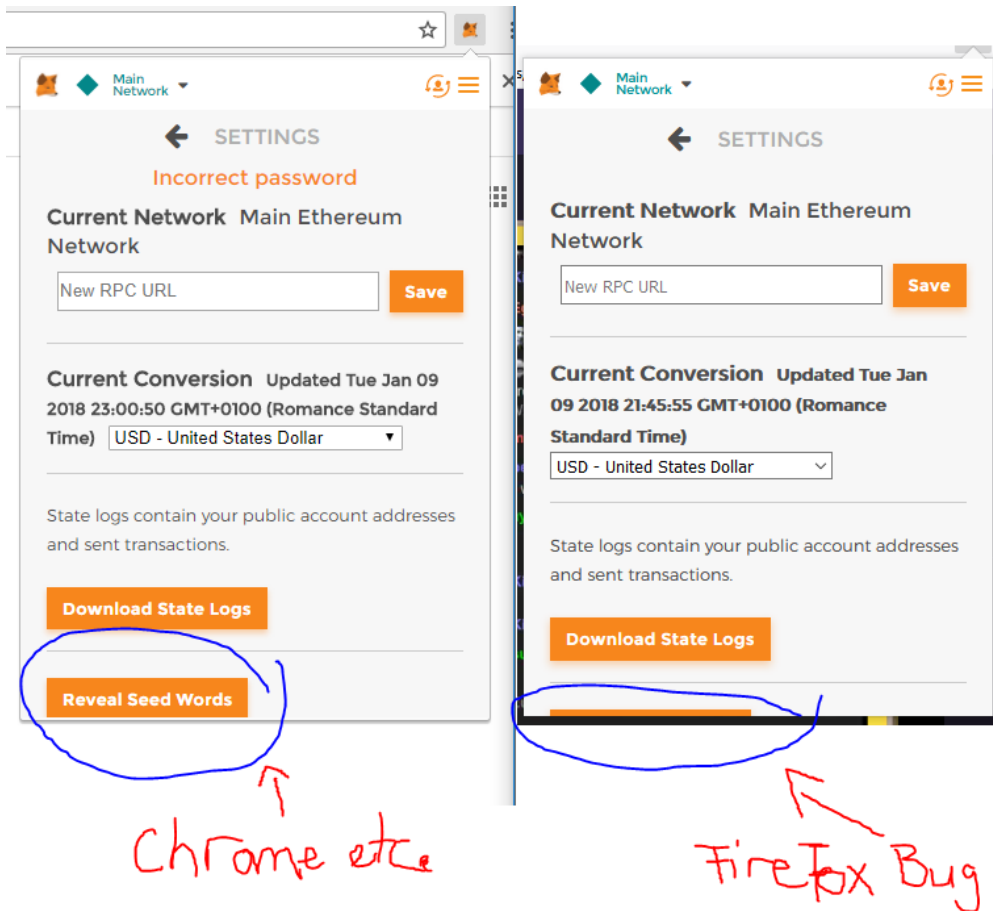

→ EXAMPLE 12 WORD SEED:

tray letter super secret twelve word seed do not share awesome advice

If you need to restore your seed from MetaMask you can do so when you are logged in by following these steps:

In the top right corner click on the menu → click on settings → at the bottom click on "Reveal Seed Words" (in Firefox you almost won't see this button, it's a little buggy, but you will still be able to click if you try a few times) → Enter your password [don't do this in public!] → write down your seed and store it securely

password/passphrase

If you use MetaMask.io it will ask you to type in a password (at least 8 characters long) to protect your account in case somebody gets access to your computer. This password is not the same as your 12 word seed! Write down this password and don't tell it to anyone. Should you ever lose your MetaMask password but still have your 12 word seed you can still recover your funds. Check the section further up on how to change your MetaMask password.

→ EXAMPLE PASSWORD:

`mySecretMetaMaskPasswordOrPassphrase`

Public Wallet Address

This is the public address of your wallet. This was automatically generated for you when you claimed your purpose and your 12 word seed on the site. You can give this address to other people if they want to send you purpose. It is no problem if somebody finds out your public address, they cannot access your funds unless they have your private key or 12 word seed.

To see your public address go to the claim site again it will say it there. Alternative: Be logged in to MetaMask and go to prps.io, it will say it there too.

Or you can see it directly in MetaMask when you are logged in.

(If you use a hardware wallet you need to unlock the wallet to see it; check official guides on how to do this.)

Caps don't matter! So if a letter is capital instead of lower case it is still fine!

Metaphor:

Your public wallet address is basically your bank account. Your bank account can have multiple currencies. Instead of € and \$, your crypto bank account can have ETH, PRPS, DUBI and many other ERC-20 tokens (it cannot store non-ERC-20 tokens like Bitcoin!). While it can have multiple currencies your main currency is always ETH, therefore it is an ETH-wallet.

If somebody wants to send you DUBI for example, you just give them your bank account address (= public wallet address) and when they send you DUBI it will be automatically added to your DUBI amount.

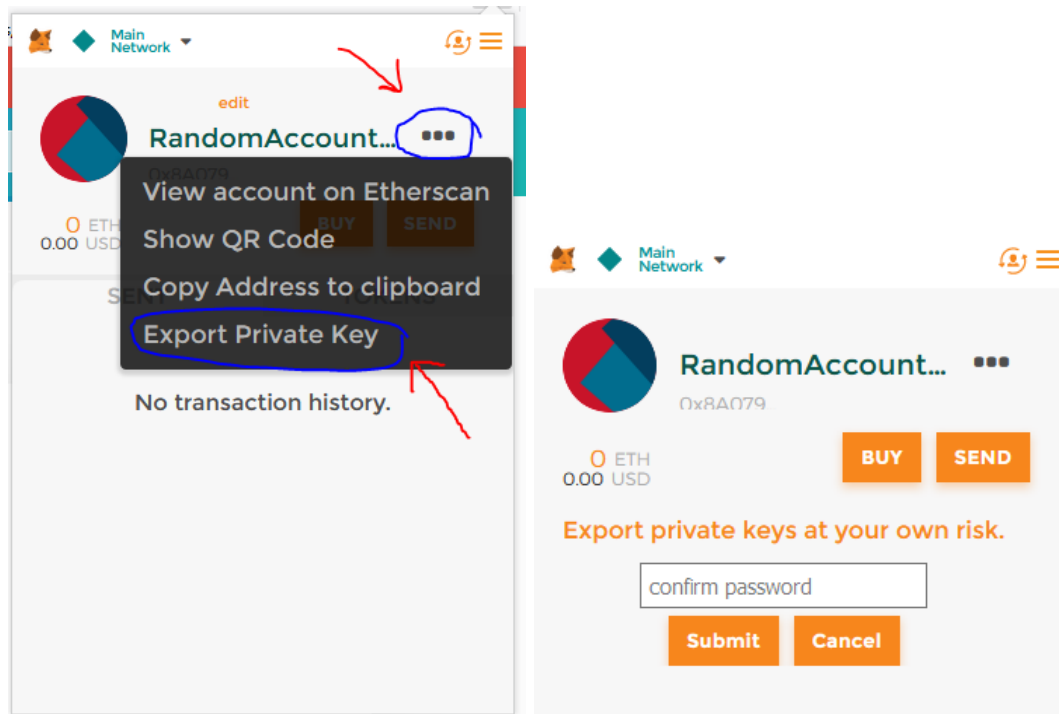

→ EXAMPLE PUBLIC WALLET ADDRESS:

`0x8A0791560PublicRandomStringC72Df25a922D2`

Private key

Anyone that knows your private key can access the connected wallet address. This also means you can use it to access your Purpose even in a different wallet software. You

can use the private key OR your 12 word seed to log in to your account on MyEtherWallet for example. Most wallets can hold multiple accounts, each having different public addresses and each its own private key. NEVER share the private key with anyone. Do NOT lose this key! If you lose this key and your 12 word seed you will **permanently lose access to all your PRPS**. If you still have your 12 word seed you can recover the private keys of your accounts in MetaMask by following these steps: Click on the 3 dots next to your account name → click on “export private key” → enter your password [don’t do this in public!] → your private key will be shown, click it to copy. You need to do this for EVERY account on your MetaMask.

Metaphor:

Your 12 word seed is a very complex version of your PIN code for your Online-Banking SUB-ACCOUNT (or your CreditCard). When somebody knows your PIN code they can send your money away and steal your funds (only from this specific account). Never give it to anyone. Your 12 word seed is like a more readable version of your private key - BUT it can also be used to access ALL funds with private keys. If you want people to send you money you will always give them your public address; not your secret keys/seeds!

→ EXAMPLE PRIVATE KEY:

9090723j51kjag9702351jasfSomeRandomStringKeepSecretaf07092735a91

The following should help in case of confusion with MetaMask accounts, private keys and mnemonic seeds.

The Mnemonic seed (12 word seed) stores ALL your accounts within MetaMask (or ledger or whichever wallet you choose). → it only has WORDS and is easily readable. Usually it has 12 or 24 words.

You can have several SUB-accounts that are store with this 1 mnemonic seed.

EACH sub account has it's own public wallet address and private key. → Both address and key are just a random string of letters and numbers.

You can create new sub-accounts with completely new addresses and keys.

You can also IMPORT existing SUB-accounts using it's specific PRIVATE KEY (or keyfile is another option).

You might have 2 mnemonic SEEDS. How do you combine these? Very easy:

Login to the MetaMask (or hardware wallet) with the LEAST sub-accounts. So if you have 1 seed that has 3 sub-accounts and 1 seed that has only 1 sub-account you log in to your SECOND seed.

Now you click on "Export PRIVATE KEY". → Logout and login with your other SEED. → IMPORT Private Key. → All your sub-accounts are on the same Seed now; DO NOT FORGET THIS SEED! This seed now has access to ALL your sub-accounts! If you lose or share it you lose ALL your funds!
