

SCIENCE LAB REPORT

Does Persil wash whiter?

Daisy

Room 10
Myth Busters Unit

INTRODUCTION

What is this experiment about?

We are experiencing which one of these powders which is Supreme, Persil and water will clean the best.

HYPOTHESIS

What do you think is going to happen?

I think that the supreme is going to be cleaner than the rest. Because I have used persil and it doesn't do much so I think the supreme will be better. But I was wrong.

What did the class think was going to happen?

That persil was going to wash out the dirty clothes better.

MATERIALS

What materials did you do?

1. 3 white singlets
2. Supreme washing powder
3. Persil washing powder
4. water
5. 2 buckets
- 6.

PROCEDURE

What steps did we do?

1. First We had to dirty the white singlets.
2. Then we had 3 volunteers to fill up the 2 empty buckets.
3. Next we tested each dirty T-shirt to see which one would clean the dirty singlets.
Which was Supreme, Persil and water.

DATA

Washing powder	Class Score
Supreme	3
Persil	19
Water	0

RESULTS

What happened to the Supreme wash?

It cleaned the dirty Singlet but it didn't do that much work

What happened to the Persil wash?

Yeah that was better than all of them because it really cleaned most of the dirty things but not all of it.

What happened to the Water wash?

It didn't clean anything at all.

CONCLUSION

Overall what do you think the result of this experiment was?

I think that I really liked Supreme because it wasn't that bad like I know a lot of people voted for persil and liked persil better. But I think that Supreme isn't that bad for 2 dollars I would rather buy Supreme than Persil because Persil is for 5 dollars.
