Plan for starting a new program in Apache APISIX, which will popularly known as

Apache-APISIX-contributorsPlayground (hypothetically named)

This repo will consist name and some details of the contributors separated with respect to their country names.

Benefits of this repo

- 1. Will make it easier for us to have a count on number of country wise
- 2. This will be the part of the task given to first time contributors as the data is committed by the new contributor themselves
- 3. This will increase our reach to new contributors who have skills but don't know how to get into the open source
- 4. There is the chance for us to get more active contributors to APISIX via this concept
- 5. Usually new contributors gets more motivated after their first PR getting merged to a big org, and they try to find more relatable issues to resolve according to their genre In the same org.
- 6. Our way of motivating those contributors by
 - by tagging them in our social media platform,
 - by providing the potential developers with schwags/goodies.
 - we will set a goal for the goodies too like
 - > If the contribution is just fixing a typo provide them with stickers
 - > If the contribution is just fixing a doc based provide them with stickers and Badges
 - > similarly for code based tweaks/improvements -> provide them t shirts
 - > for feature based -> provide with some more add-on
 - > for plugin based contributions -> some more add-on
 - > etc

Sub-groups and Groups

- Subgroups to be created according the projects we our maintaining under Apache APISIX.

(*note - numerical for groups and dot for sub groups

- 1. Apache APISIX -
- Doc based
- API Based
- Plugin based
- 2. Apache APISIX® Ingress Controller
 - Doc based
- 3. Apache APISIX® dashboard
- 4. Apache APISIX® Helm Chart
- 5. Docker distribution for Apache APISIX®
- 6. Apache APISIX® Website
- 7. Apache APISIX® Java Plugin Runner
- 8. Apache APISIX® Go Plugin Runner
- 9. Apache APISIX® Python Plugin Runner
