

You want your rail face down like in the pic above

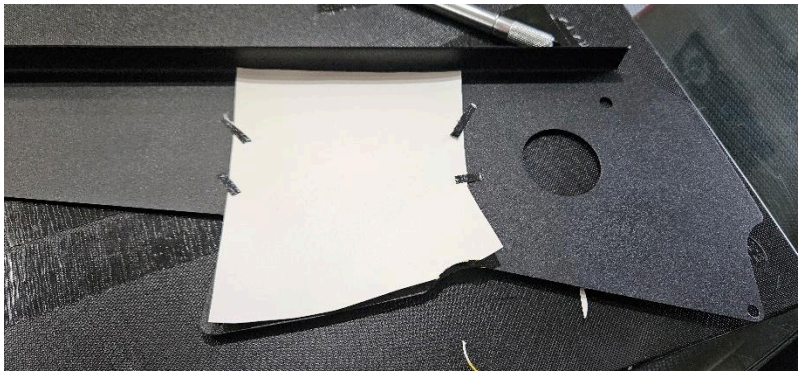

Line up your vinal with the image on the rail. Make sure there are no gaps

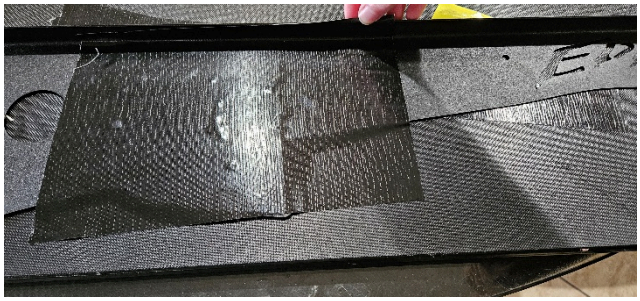

Once you have it lined up tape down the edges so it doesn't move while placing the vinal back

*do not remove the back of the color vinal!!

Remove the back of the black vinal and slowly lay it down keeping it from wrinkling or bubbles

remove any exes vinal from the edges with an exact knife or razer blade

*Be careful so you don’t scratch any powder coat
