

Aktiun is currently looking for a **privacy project manager** to join our team on a full-time basis.

Working with us will provide you with exciting career opportunities in a diverse environment and the chance to develop further professionally as well as personally.

What you'd get to do:

As a privacy project manager, you will combine your project management expertise, investigative research, and technical understanding to manage initiatives around data broker takedowns and data protection processes. You will bridge the gap between technical execution and business-level reporting for leadership in the privacy and data protection space.

The ideal candidate will be comfortable translating complex technical work into clear business reporting and driving privacy-focused projects forward with precision and clarity.

Key responsibilities:

- Lead and manage privacy-related projects such as data broker takedowns
- Translate data acquisition requests into actionable technical tasks (Jira, Confluence, etc.)
- Collaborate with technical teams and business stakeholders to align on priorities and deliverables
- Conduct and oversee research into data brokers, OSINT sources, and data aggregation practices to identify gaps and processes for removal
- Systematically document processes, findings, and workflows for internal and external use
- Deliver clear reporting on project progress, findings, and outcomes

What we care about:

- Awareness of web technologies, email systems, and high-level data scraping methods
- Strong investigative capabilities (e.g., researching broker sites, designing takedown processes)
- Ability to identify gaps between takedown platforms and data broker workflows
- Ability to systematically document processes and findings
- Familiarity with OSINT techniques and data classification practices
- Basic knowledge of privacy frameworks (GDPR, CCPA, CPRA)
- 1+ years managing technical projects or as a project/product manager
- Experience with project management methodologies and roadmap planning
- Comfortable converting requests into technical work (Jira)
- Ability to translate technical work into business-level reporting
- Excellent written and verbal communication for both technical and non-technical audiences
- Ability to report from the end-user perspective

Nice-to-Have Qualifications:

- Direct experience with the data broker industry or people-search sites
- Background in cybersecurity, threat intelligence, or digital investigations
- Prior work in privacy-focused roles or companies
- Experience with web scraping and automation tools. Thinking like a developer, reverse engineering how pages work
- Familiarity with legal compliance automation and data broker opt-out processes
- Knowledge of consumer privacy rights and auditing/compliance practices

If you are interested, please send your CV to jobs@aktiun.com. We are looking forward to hearing from you.
