

Word Games

[Madlib](#)

[Pig Latin](#)

Objectives

- Use the DOM to access the value of input fields.
- Use the DOM to modify the innerHTML of a div.
- Use string methods.
- Use array methods.

Madlib

- Feel free to change any of the content from the previous HTML template before you move on, or create a new HTML file.
- To get started, add these elements in the HTML body:
 - text input
 - button
 - paragraph
- Implement the following behavior:
 - When you click the button, the text in the input is echoed to the paragraph below
- Now, create several inputs with labels, and a single "submit" button.
- When the button is clicked, call a function that generates a story using the information entered and displays it in the paragraph below.

Madlib

Person:

Verb (past tense):

Adjective:

Place:

Thing:

One time a person named Joe went to the school to pick up a hammer. But, when he got there, the hammer was a bit smelly so he played all the way home.

Pig Latin

- Create a div with a text input, button, and paragraph.
- When you click the button, the text in the input is translated to Pig Latin
- Rules of Pig Latin:
 - Words beginning with the vowels {'a','e','i','o','u'} should have 'way' appended to them.
 - Words beginning with consonants should have the consonant moved to the end of the word followed by 'ay.'
 - All letters should be lowercased.
- For example:
 - "Hi how are you doing" → "ihay owhay areway ouyay oingday"
- Extensions (**optional**):
 - Make your translator work with punctuations.
 - Make your translator work with words that have multiple letters that make a single sound at the beginning. e.g.: "chocolate" → "ocolatechay"
