

Flat-Earther or just Flat Chested?

Greetings and salutations. I am Emily Ratajkowski, member of the Hellfire Girls Club and highly regarded lightweight MMA fighter in the UCC.

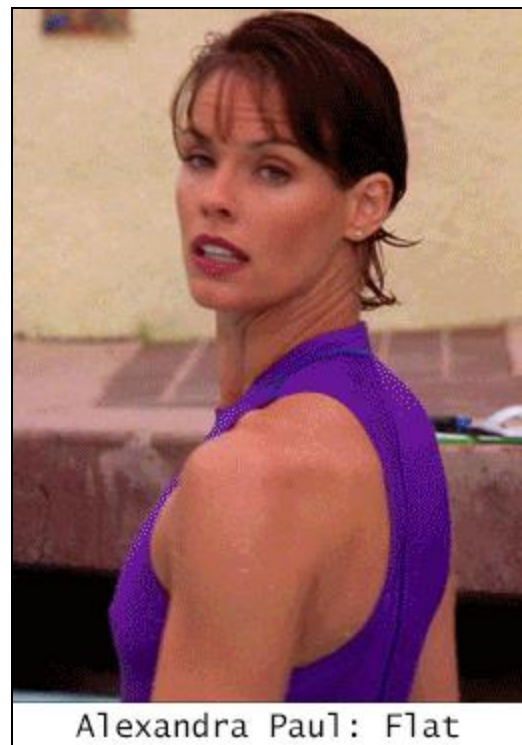

In my previous musings, I posed a question: ***"Is there a relationship between Flat Chested Women and modern Flat-Earthers?"***

I arrived at this ponderous query during the Disappearing Object Phenomenon era of the UCC narrative. During that time it came to my attention that a small number of my fellow cage fighters, such as **Alexandra Paul** (whom I did not know even existed), possessed a very flat chest. With almost no breasts to speak of these women are able to become almost invisible.

As I began to research these flat chested women, I found an alarming number of incidents, comments and memes on the Internet that attempted to draw a conclusive, almost symbiotic, relationship between said women and those who deem the Earth to be flat.

I, for one, scoff at the very notion that the Earth is non-spherical. As any person with a sound grasp of classical history will tell you, the notion of a spherical Earth can be traced back as far as Pythagoras, Plato, Aristotle, Archimedes, Eratosthenes and others. Was it not Pythagoras who famously said, "There is geometry in the humming of the strings, there is music in the spacing of the spheres. The Earth is spherical, just like the big, round boobies that I love so much."

As such, my investigation has begun in earnest. But where to begin? As a woman with perfect breasts I admit I struggle with the very notion of what being flat chested must feel like. One cannot simply put on an A cup bra and experience this lack of breasts for oneself.

I have arrived at the conclusion that initially I must try to document the different types of mammaries one may find in the wild. Perhaps this will help me to find a correlation between size, shape, volume and so on, to those who believe the very Earth we stand upon is not spherical.

To wit, I have compiled a diagram to aid me in the examination of my hypothesis. (Diagram located in the appendix of this article).

It is apparent that being a physical aspect of a woman's beautiful body, breasts come in a multitude, nay a myriad of different sizes and shapes. My diagram seeks to only be a guide.

Alexandra Paul would appear, on the face of it, to be a member of those women who would be classified as having **Athletic** shaped breasts. Perhaps 'athletic' is the wrong term? Would muscular, robust or strapping be more appropriate?

I delved deeper into the statistics of the UCC roster where **Alexandra Paul** is cited as wearing a 36AA bra size. She is not alone in wearing that most shallow of cup sizes, **Camren Bicondova** is also credited as a AA. But what of those deemed to be slightly bigger? Those who wear an A cup bra?

Astoundingly the UCC currently has 45 women registered with an A cup. I never knew so many women were cursed with an ironing board chest. Moreover, two of them are members of my own stable! I do not believe these statistics, **Victoria Justice** and **Chloe Bennet** have been measured to wear an A cup over their firm breasts? Astounding. If it's true. Is this something else I must also investigate?

Let me get back to the point. What is the correlation between the physical aspects of a flat chest and the geographical aspects of a hypothetical flat Earth? And what of the inverse? The similarities between the spherical Earth and the roundness of a full breasted woman. What of the gravitational effects? Is there a parallel that can be concluded between a nipple and a mountain peak?

In order for us to draw some conclusions to these questions, I have produced two reference diagrams that clearly illustrate such interdependence. (Diagrams located in the appendix of this article).

Let me get back to the point. In order to prove my hypothesis I will have to engage in conversation with members of the UCC. In particular **Alexandra Paul** and **Camren Bicondova**. Do they believe the Earth to be as flat as their chests? If they do, is this belief born from a conspiracy or a flat chested agenda?

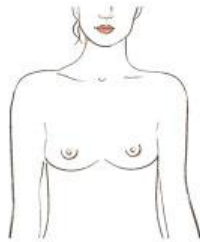

Until I am able to have an unbiased and scientific conversation with these women, my machinations are purely theoretical. Therefore, I must conclude that this investigation is far from concluded.

Appendix

Asymmetric

One breast is larger than the other.

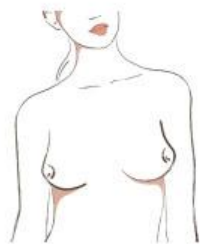

Athletic

Wider, more muscular breasts with less tissue.

Bell

Slimmer at the top, fuller at the bottom.

East West

Nipples point outward, in opposite directions.

Relaxed

Softer tissue and nipples point slightly downward.

Round

Equally full at the top and bottom.

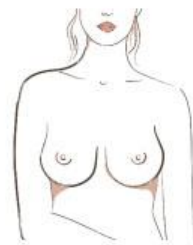

Side Set

Wide space between breasts.

Slender

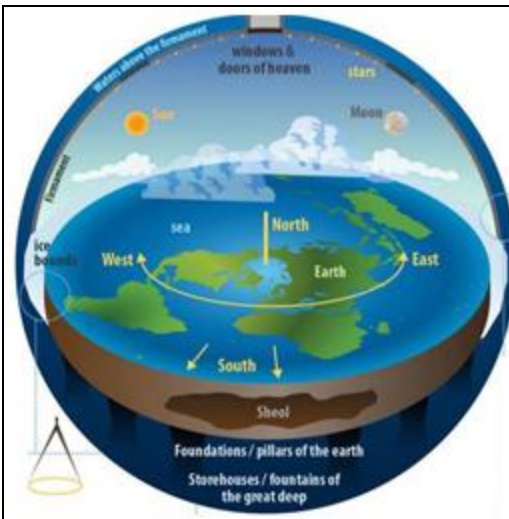

Thinner and nipples point slightly downward.

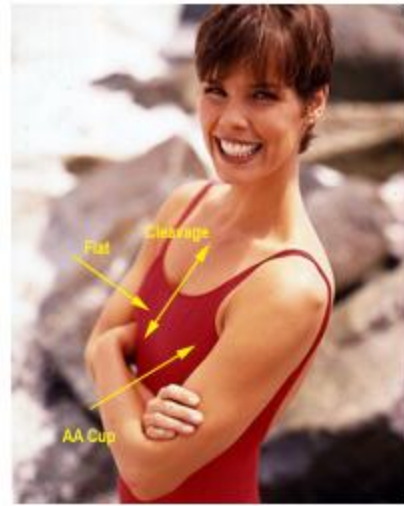

Teardrop

Round and slightly less full at the top.
