

Purpose

Collect all review comments and faults of the antora-built new website currently staged at cassandra.staged.apache.org

Pages

Styling

- Somehow felt the overall styling used by <https://pulsar.apache.org/docs/en/standalone/> is clear and crisp

Menu

- ~~Not sure it matters, but the staged site shows an underline under first letter of the item you're highlighting in menu (whereas current site does not)~~
- Discussions hyperlink not working -- in main navigation

Front page

- 4.0 blog on the homepage -- drop the front door blog
- front page has "Learn More" text twice for different links
- front page refers to 4.0 Beta
 - Diogenese just submitted other homepage updates to go live with the 4.0 GA (and other updates) here — in Antora: <https://issues.apache.org/jira/browse/CASSANDRA-16802>
 - **Diogenese sending files to Paul**
- front page has "Watch Now" button
 - Diogenese just submitted other homepage updates to go live with the 4.0 GA (and other updates) here — in Antora: <https://issues.apache.org/jira/browse/CASSANDRA-16802>
 - **Diogenese sending files to Paul**
- front page the header description ("Manage massive...") looks bold but should not be
- front page "What is.." description is different from current
- front page Distributed icon needs to be updated (it's a duplicate of Scalable")
- front page the user logo section needs header "Cassandra Users"
- front page Bloomberg quote is wrong — and their logo should be right aligned (looks left aligned currently)
- front page missing "Community Spotlight" header
- front page in the Spotlight section, the blog title font/style is different than current
- footer need more space between logo and text below
- footer copyright says © 20212021

Basics

- Images aren't opening in bigger window on-click (as they do on current page)

Quickstart

- ~~The “Interested in getting started...” looks bold but should not be. Or is this a bigger font than the previous site for (what I'm guessing is an) H2 header?~~
- ~~When making screen width smaller, the code snippets do not wrap and some are not visible because they're too long~~
- Step 8 - looks to be an extra space before “Docker kill Cassandra”
- CTA on this page should be “Get latest updates..” and go to blog

Ecosystem

- The second “Cassandra Tools” should be “Cassandra Kubernetes Operators”
- Under Connectors, a few items aren't styled correctly, e.g. ==== Apache Spark
- Professional Support - remove colon after DataStax Luna
- Note: Diogenese has a few updates to this page in the same ticket above

Docs

- <https://cassandra.staged.apache.org/doc/latest/> is (1) not using the new website styling and should be, and (2) appears to be using the most current in-tree docs to build the content.

Community

- Header should say “Cassandra Community”
- Under mailing lists — Unsubscribe has a typo for multiple buttons
- Contributor Meetings — can we expand space between that header and the description?
- Under Project Governance, the “Governance” button and “Apache Way” icon are touching
- Add to “Meet the Community for PMC: Dinesh Joshi

Case Studies

- Same question about header size here, looks bigger or bold perhaps? Also typos to be fixed: From startups [lower case] to the largest enterprises, the world runs on Cassandra. [add period]
- On current site, the full box is clickable for better UX — can we do the same for each case study entry here?
- Can we make the text logo (not brand logo) bigger to match current size? e.g. Apple

- The descriptions are cut off in some places, e.g. Apple, AdStage, Bigmate and have an ellipsis instead. Are we able to put full copy in? There looks to be enough space.
- Bloomberg should have Bloomberg Engineering logo. Across the board, please check for parity with current site as several logos are what people gave us. Some, like Coursera, we've been asked not to include (it should be text). Current site also has new ones (e.g. Dream11) that are missing from staging.

Resources

- Same question for the tiles as on case studies: On current site, the full box is clickable for better UX — can we do the same for each case study entry here?
- I assume the gray text are tags -- do we need those exposed or can we hide?
 - Then can we make the boxes slightly smaller overall

Blog Main

- Same question for the tiles as on case studies: On current site, the full box is clickable for better UX — can we do the same for each case study entry here?
- Typo on “Speakers Announce for April 28 Cassandra 4.0 World party” should read “Speakers Announced for April 28 Cassandra 4.0 World Party”
- Duplicate entry for “Introducing Apache Cassandra 4.0 Beta: Battle Tested From Day One” July 20, 2020

Individual Blogs

1. Overall
 - a. « Back to the Apache Cassandra Blog > The “g” is not hyperlinked

```
<div class="inner inner--narrow">
  <a href="/blog.html">« Back to the Apache Cassandra Blog</a>
</div>
```

b. You can see that the g in blog is included in the hyperlink.
2. https://cassandra.staged.apache.org/_/blog/Apache-Cassandra-Changelog-8-June-2021.html
 - a. Fix: Container

Journal: <https://containerjournal.com/kubeconcnk/why-a-cloud-native-database-must-run-on-k8s/> [Why a Cloud-Native Database Must Run on K8s]

Download

- Can we have the body copy styling match what's on the current site? The staging site copy styling gives different weight to the copy and makes it harder to grok immediately.
- Same note here as on Quickstart: the code snippets do not wrap so you can't read full text
