**Protoshares are a new cryptocurrency allowing you to invest in the idea of distributed autonomous companies. These companies operate autonomously beyond control of its original maker, in the same way bitcoin and other cryptocurrencies do. They all provide some service of value to certain customers in a distributed network. Protoshares will give you the possibility to claim your share in this entirely new market of products to come.**

You can start mining Protoshares now or buy some (add suitable urls). Besides being used as a currency these shares will automatically give you a share in all distributed autonomous companies who honor Invictus Innovations social contract (url). All holders of Protoshares together get an automatic 10% share in every new company.

The future gives rise to companies which we can trust with data, which don't fall prey to the natural human flaws that can turn a bona fide company into a citizens worst nightmare. Distributed autonomous companies (or DACs) are unmanned and execute their business rules in an automatic manner powered by a network of nodes agreeing to work for this DAC. There is no central governance or database allowing governments or third parties to destroy the integrity of the company.
