Book Description:

No matter how visually appealing or packed with content your Web site is, it isn't succeeding if it's not reaching the widest possible audience. If you get this guide, you can be assured it will! By deconstructing a series of real-world Web sites, author and Web designer extraordinaire Dan Cederholm outlines 10 strategies for creating standards-based designs that provide flexibility, readability, and user control key components of every successful Web site. Each chapter starts out with an example of what Dan refers to as an unbulletproof concept: an existing site that employs a traditional approach and its associated pitfalls. Dan then deconstructs that approach, noting its downsides and then making the site over using Cascading Style Sheets (CSS). By the end of each chapter, you'll have replaced traditional, bloated, inaccessible page components with lean markup and CSS. The guide culminates with a chapter that pieces together all of the page components discussed in prior chapters into a single page template.
