## **How to update your theme**

To update your Creation Crew Center, please make sure before proceeding that you have made a backup of your current files.

- Download the update from your Account at <https://crm.creationweb.uk>
- The file will be marked as follows - eg. CC1.8.1.zip
- If there are any asset updates, there will be a zip with version number along with asset - eg. CC1.8.1\_assets.zip

- Upload the CC1.8.zip to your Creation Crew theme located at /phpvms/resources/views/layouts/THEMENAME
  - Unzip and overwrite files
  - If assets need uploading, upload to /phpvms/public/assets/frontend/THEMENAME
  - Same as above, upload and overwrite files
  - Once done, go to the admin panel of phpVMS, navigate to maintenance and Clear all caches.
  - SUCCESS update is now completed
- 

## Changelogs

Version 3.0

**Pre Requirements** 7.0.4+250313.93adb4

### **Main Framework**

Ability to scroll added to timezone dropdown \*

Flights map added to PIREPs !

Subfleet additional search options added =

Flight search reworked to use choices.js \*

User welcome notice on header updated with Typed.js \*

Paychecks Chart added to show earnings over the last 6 months !  
Paychecks earnings to previous month and previous year comparison added !  
Shop Currency Symbol added #

## Version 2.1

Release date: 07/05/2024

Key: - = Update Suggestion | # = Bugfix | ! = NEW FEATURE

### **Main Theme Framework**

- Users being able to register without consenting confirmed fixed #
- Update to Pireps layout section

### **Cardinal Horizon Modules**

- CHJumpseat Support Added !

## Version 2.0

Release date: 07/05/2024

Key: - = Update Suggestion | # = Bugfix | ! = NEW FEATURE

### **Main Theme Framework**

- Removal of all Disposable Modules and Calls !
- Update to Flight bid button logic -
- Theme Function Added for Flight Time Conversion !
- Theme Function Added for Flight Type Display !
- Theme Function Added for Distance Conversion !
- Theme Function Added for Units Conversion !
- Flight type updated with Laravel's e() function to escape output, preventing XSS attacks !
- Support for CHFreeFlights Module !
- Awards in Pilot Profile show date awarded !
- Awards in Pilot Profile include award images !
- Dashboard Stats widgets updated with conditional logic and animations !
- Live map added to dashboard !
  - Additional Fix to widget #
- Weather Widget Updated layout and animations !
- Latest Pilots Widget restyled with animations !
- Flight Search Layout updated !
- Flight Bid button updated to full button -
- Flight search is now on a closable panel !
- Inbound and outbound flight board updated on Airports!

### **Creation Crew Module**

- Flights map page added!
  - Limited to loading 1000 flights to speed up loading times #
- Fleet Location map page Added!
  - Additional fix for non flown fleet causing 500 error #
- Awards Page added!
- Flight map active bids table added!
- Fleet Location map table added!
- WX Radar added!

## **Version 1.8.3**

Release date: 27/02/2024

Key: - = Update Suggestion | # = Bugfix | ! = NEW FEATURE

- Flight map limit applied for Flight Search Extremely Slow Fixed #
- Roster board VATSIM, ICAO ID issue in roster Fixed #
- Tour/Leg approval messages updated -
- Profile settings button update -
- Profile flights and assignments height fixed -
- PAX load input fix on Simbrief briefing creation -

- Flights pop up map added to Airport page -
- Password reset form updated !
- Registration form update !
- Flight Search Form updated !
- Create Pirep Form Updated !
- Custom Pirep Fields Updated !
- Pirep Edit Form updated !
- Pirep Fare Fields updated !
- Pirep Main Fields updated !
- Profile Custom Fields updated !
- Profile Edit Updated !
- Profile Edit Fields Updated !
- DAirlines issue fixed when viewing airline #
- Global removal of Height class on widgets #

## Version 1.8.2

Release date: 21/02/2024

Key: - = Update Suggestion | # = Bugfix | ! = NEW FEATURE

- Implementation of Discord OAuth !
- Update to login form !

## Version 1.8.1

Release date: 17/01/2024

Key: - = Update Suggestion | # = Bugfix | ! = NEW FEATURE

### Dark mode

- Discord Widget Text Fix #
- Assignments Widget Text Fix #
- Hubs Text Fix #
- Assignments Text Fix #
- Active Flights Widget Text Fix #
- Pirep View Flight Log text Fix #
- Pirep View Simbrief text Fix #
- Tour Widget Permissions fix #
- Flight Search and My Bids title fix #
- Journal Styled under profile Balance !
- Profile Flight reports added and styled !
- Pirep details Flight Log, fields and Simbrief Log added to collapse card !
- Pilot Roster IVAO & Vatsim Condition logic updated -

## Version 1.8

Release date: 15/12/2023

Key: - = Update Suggestion | # = Bugfix | ! = NEW FEATURE

- Live Map - Fix for flight on click information #
  - Live Map - Pilot in Command added -
  - Free Flights - Flight type selection added -
  - Flights - Update flight type call code #
  - Flights - Updated flight bid script logic - page auto refresh on adding/removal of bid #
  - Flights - Flight search inputs styling fixed -
  - Flights - Flight search button resize -
  - Flights - Fleet & Flights Maps Buttons added to row and sized to fit -
  - Flights - Page refreshes on bid placement/removal -
  - Flights - Flight information page updated -
  - Flights - Flight data logic hide/show added -
  - Flights - Return to flight converted to jquery button for routing -
  - Bids - Flight Type Bug Fixed #
  - Bids - Page refreshes on bid removal -
  - Fleet - Sortable Columns added -
  - DPireps - Styled to match core framework !
  - DRanks - Styled to match core framework !
  - DOps Manual - Styled to match core framework !
  - Assignments - Admin buttons added to widget -
  - Pilots/Roster - Updated styling to overall design !
  - Pilots/Roster - Rank Image(s) basic set included !
  - Dashboard - Discord Widget Update !
  - Dashboard - Our Flights Widget updated !
  - Profile - Tour widget condition check added -
  - Statistics - Hyperlinking for name included -
  - Airports - Inbound and Outbound flight tables updated -
  - Hubs - Notes styled -
  - Hub Pilots Styled -
-

## Getting Started

### Setting up custom fields for IVAO/Vastim

To get started login to your phpVMS installation with an admin account. Once signed in, head to the Admin panel. Navigate to users and then on to the top menu bar press “Profile Fields”.

Top menu, press add field and add the following in for both IVAO & Vatsim -

#### **IVAO**

Name: IVAO ID

Required: Optional

Show on Registration: Yes

Private: No

Active: Yes

#### **VATSIM:**

Name: VATSIM CID

Required: Optional

Show on Registration: Yes

Private: No

Active: Yes

Once done save, now pilots can fill out ID's on profile and registration. If they still aren't showing, you will need to head to your theme files located at  
/phpvms/resources/views/layouts/THEMENAME  
Then open & edit file “theme.json”

Populate the following lines as follows then save:

`"gen_vatsim_field": "VATSIM CID"`

`"gen_ivao_field": "IVAO ID"`

### Setting up SMTP Email

For phpVMS 7 to be able to send emails, you must set up the SMTP settings within your installations .env file.

Open up your .env file and edit the following :

```
MAIL_MAILER=smtp
```

```
MAIL_FROM_NAME='phpVMS Admin'
MAIL_FROM_ADDRESS='EMAIL HERE'
MAIL_HOST='HOST HERE'
MAIL_PORT=587
MAIL_ENCRYPTION='SSL'
MAIL_USERNAME='EMAIL HERE'
MAIL_PASSWORD='PASSWORD'
```

Once entered, save changes. All email should now be sent within phpVMS 7.

## Creation Crew Module

Links to add to navigation menu

Flights map - {{ route('creationcrew.flightmap.map') }}

Fleet map - {{ route('creationcrew.flightmap.subfleet.map') }}

Awards - {{ route('creationcrew.awards.awards') }}

WX Radar - {{ route('creationcrew.wxradar.wxradar') }}

## Known Issues

### Slow loading times for schedules (\*\*PATCHED in 1.8.3\*\*)

This issue is caused by the Flight Map and Fleet Map widgets embed on the page when airlines have 1000's of schedules. To fix this issue you can either increase your servers php memory limit or change the following lines at

/phpvms/resources/views/layouts/THEMENAME/flights/search.blade.php

#### Find:

@widget('DBasic::Map')

#### Replace with:

@widget('DBasic::Map',['limit' => 1000])

### Images not showing

When updating some images might now show. Please update the following files -

#### Dashboard -

On index.blade.php inside Dashboard folder, update the following line with your theme name

```
$themeName = 'THEMENAMEHERE'; // Define your theme name here
```

## File Changes \*Mandatory

### App.blade.php

#### 1.Style Updates

Just before `</head>` close tag add the following

```
<style>

    .select2-results__option {
padding: 6px;
user-select: none;
-webkit-user-select: none;
color: #000;
    }

    .form-control.form-control-solid {
background-color: #ffffff;
color: var(--bs-gray-700);
    }

    .dropdown.show > .form-control.form-control-solid,
.form-control.form-control-solid.active, .form-control.form-control-solid.focus,
.form-control.form-control-solid:active, .form-control.form-control-solid:focus {
background-color: #ffffff;
color: var(--bs-gray-700);
    }

</style>
```

#### 2.Footer Copyright update

Please update your footer with the following

```
<!--begin::Footer-->

    <div class="footer py-4 d-flex flex-column flex-md-row flex-stack"
id="kt_footer">
```

```

<!--begin::Copyright-->
<div class="text-dark order-2 order-md-1">
    <span class="text-dark fw-semibold me-1">2024&copy;</span>
    <a class="text-gray-800 text-hover-primary">{{ config('app.name') }}</a>
</div>
<!--end::Copyright-->
<!--begin::Menu-->
<ul class="menu menu-dark menu-hover-primary fw-semibold order-1">
    <li class="menu-item">
        <a
href="https://creationweb.uk/services/phpvms-website-design/phpvms-creation-crew-cent
er/" target="_blank" class="menu-link px-2"> Framework by Creation Crew</a>
    </li>
    <li class="menu-item">
        <a href="http://www.phpvms.net/" target="_blank" class="menu-link
px-2"> Powered by phpvms</a>
    </li>
</ul>
<!--end::Menu-->
</div>

</div>
<!--end::Footer-->

```

## Nav.blade.php

### User menu updates

There are new Menu updates for the user menu which is pretty straightforward to update compared to the main nav menu.

Please head to your theme located at /phpvms/public/assets/frontend/THEMENAME/ Open nav.blade.php locate the User menu, this can be done by pressing Ctrl+f and pasting in the following `<!--begin::User menu-->`

Once located you can update your menu with the following -

```

@if(Auth::check())
<!--begin::Menu item-->
<div class="menu-item px-5">

```

```

<a href="{{ route('frontend.profile.index') }}" class="menu-link px-5">My Profile</a>
</div>
<!--end::Menu item-->
<!--begin::Menu separator-->

<div class="separator my-2"></div>
<!--end::Menu separator-->

<div class="menu-item px-5">
<a href="{{ route('frontend.flights.bids') }}" class="menu-link px-5">My Bids</a>
</div>

<div class="menu-item px-5">
<a href="{{ route('frontend.pireps.index') }}" class="menu-link px-5">My Pireps</a>
</div>

<!--begin::Menu item-->
@ability('admin', 'admin-access')
<div class="menu-item px-5">
<a href="{{ url('/admin') }}" class="menu-link px-5">Admin</a>
</div>
<!--end::Menu item-->
@endability
<!--begin::Menu item-->
<div class="menu-item px-5">
<a href="{{ url('/logout') }}" class="menu-link px-5">Sign Out</a>
</div>
<!--end::Menu item-->
@else

<div class="menu-item px-5">
<a href="{{ url('/login') }}" class="menu-link px-5">Login</a>
</div>
<div class="menu-item px-5">
<a href="{{ url('/register') }}" class="menu-link px-5">Register</a>
</div>
<!--end::Menu separator-->
@endif

```

You can also update the main menu call to include the pilots name with the following

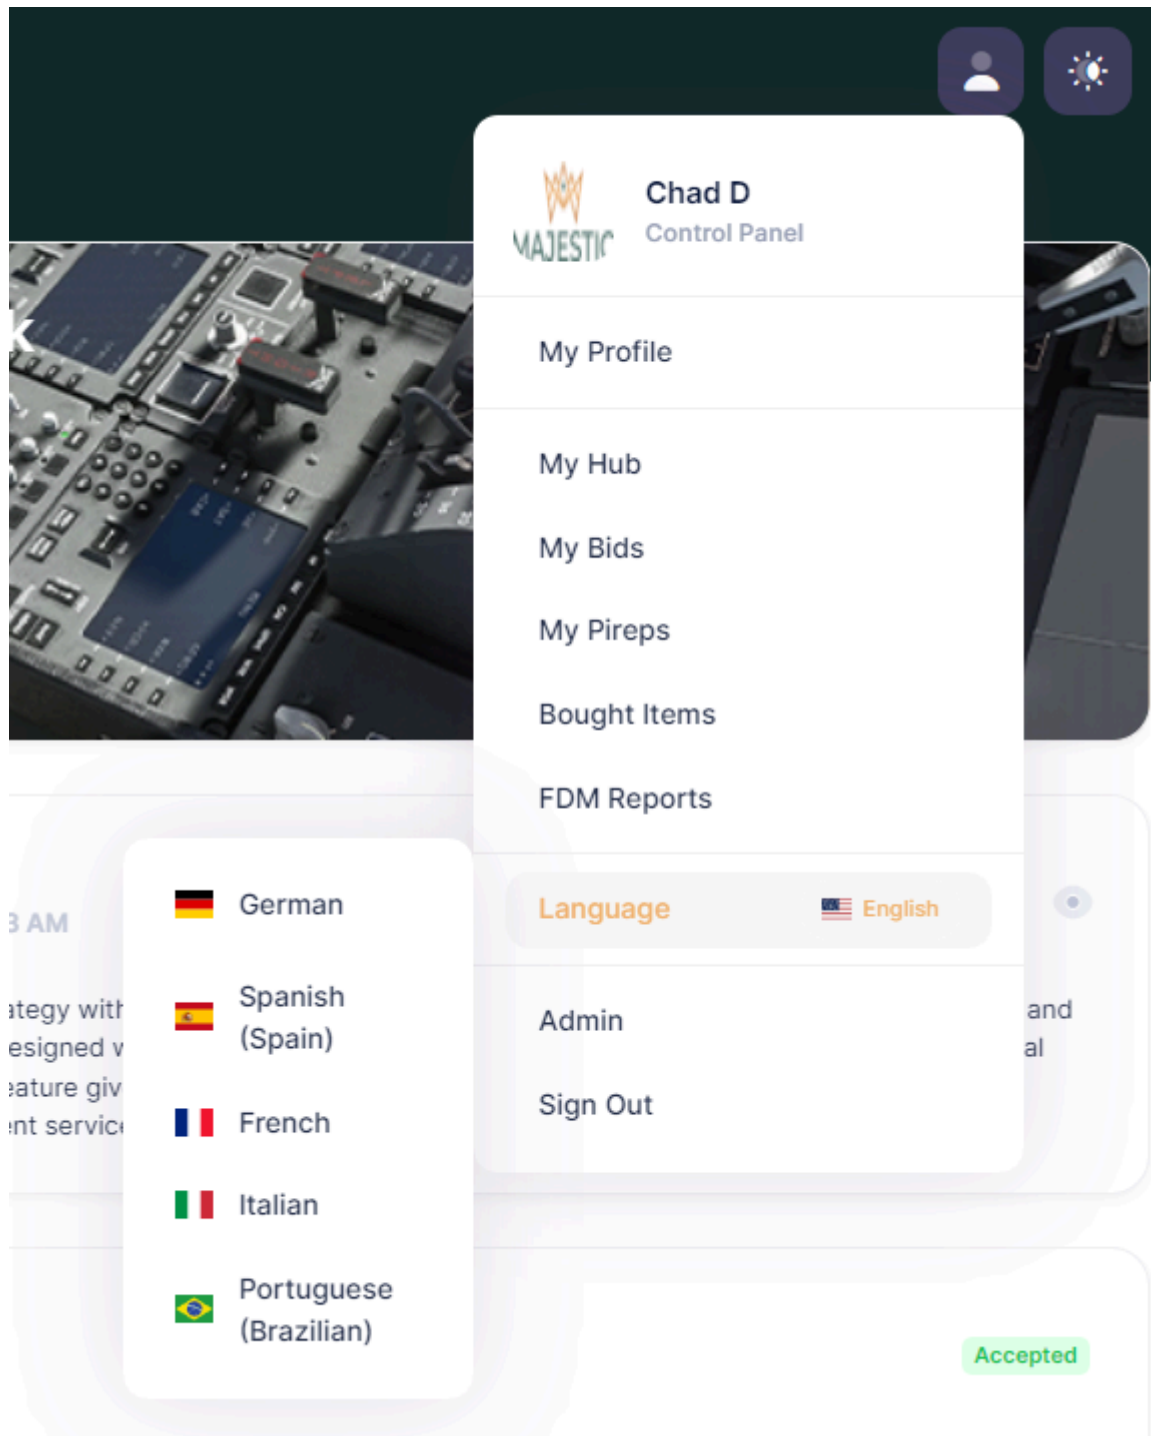

```

<!--begin::Name-->
<div class="d-none d-md-flex flex-column align-items-end justify-content-center me-2 me-md-4">
<span class="text-white opacity-75 fs-8 fw-semibold lh-1 mb-1">{{ optional(Auth::user())->name_private ?? 'User Account' }}</span>
<span class="text-white fs-8 fw-bold lh-1">Control Panel</span>
</div>
<!--end::Name-->

```

## Nav.blade.php

Adding in Multi Language Menu option

Add the code below after the FDM Reports call and before the Admin Option call.

```
<!--begin::Menu separator-->
    <div class="separator my-2"></div>
    <!--end::Menu separator-->
    <!--begin::Menu item-->
```

```

<div class="menu-item px-5" data-kt-menu-trigger="{default: 'click',
lg: 'hover'}" data-kt-menu-placement="left-start"
data-kt-menu-offset="-15px, 0">
    <a href="#" class="menu-link px-5">
        <span class="menu-title position-relative">Language
            <span class="fs-8 rounded bg-light px-3 py-2
position-absolute translate-middle-y top-50 end-0">
                <span class="flag-icon flag-icon-{{
$languages[$locale]['flag-icon'] }}"></span>&nbsp;&nbsp;&nbsp;{{
$languages[$locale]['display'] }}"
            </span>
        </span>
    </a>
    <!--begin::Menu sub-->
    <div class="menu-sub menu-sub-dropdown w-175px py-4">
        <!-- Dynamically generated menu items for languages -->
        @foreach ($languages as $lang => $language)
            <div class="menu-item px-3">
                @if ($lang != $locale)
                    <a href="{{ route('frontend.lang.switch', $lang)
}}" class="menu-link d-flex px-5">
                        <span class="symbol symbol-20px me-4">
                            <span class="flag-icon flag-icon-{{
$language['flag-icon'] }}"></span>
                        </span>{{ $language['display'] }}
                    </a>
                @endif
            </div>
        @endforeach
    </div>
    <!--end::Menu sub-->
</div>
<!--end::Menu item-->

<!--begin::Menu separator-->

<div class="separator my-2"></div>

    <!--end::Menu separator-->

```

## Version 2.0 Release Update Guide

## Pre upgrade notice

Please be aware that this is considered an entirely new release and some/if not all previous features have now been removed and are being replaced with our own platform features. This means that Disposable Modules are **no longer supported and will not work** with this version of Creation Crew.

We **strongly** advise backing up your old phpVMS build and creating a new build of phpVMS with your old .env file merged. If you require installation assistance, we are offering this service at a reduced price for current members at £30. This upgrade can take anywhere from 30 minutes to 2 hours.

## Prerequisites

A current installation of Creation Crew 1.8.3

Creation Crew 2.0 Files - [Download from Github](#) - Download from Secure Vault - Download on Discord

Creation Crew Module - [Download from Github](#) - Download from Secure Vault - Download on Discord

[Cardinal Horizon Free Flights Module](#)

[Cardinal Horizon Trips Module](#)

[Cardinal Horizon Pirep Save](#)

## Step 1 - Backup

Head to your phpVMS 7 installation and create a **complete backup** of the whole installation. We would highly recommend **completing a database backup** too either via [cPanel](#) or [phpMyAdmin](#) as an SQL Export.

You are **not** going to delete your active installation, instead we are going to edit and merge files. This process requires the **removal of Disposable Module calls & module itself**. Once ready, head on down to Step 2 and continue on following the guide.

## Step 2 - Uninstall & Removal

Sign into your phpVMS 7 installation with an **administrator account** and head to the **admin panel**. Once there, on the left hand side menu head to **addons/modules**.

There you will need to edit both **DisposableBasic & DisposableSpecial** by hitting the edit module button.

Uncheck the module status from Enabled and click save. Once refreshed, you are now going to delete the module by following the prompt - Type in **DISPOSABLEBASIC/DISPOSABLESPECIAL** to Delete

You may now need to head to the url **yourdomain.com/update** and run any outstanding

processes that need to be run after removal. If you hit a **500 error** at any time after removal, you will need to **manually clear the cache** by deleting all of the files in bootstrap/cache and storage/framework/cache (**delete the contents, NOT the folders**).

## Step 3 - Edit & Merge

TBC

This is where it's going to get a little complicated so you please pay attention to avoid errors. Retrace steps if needed. We are going to list each file below with the code lines you need to take out and what to replace them with (if needed). It is worth looking and comparing the files you are editing between each other to get an understanding before going full head dive into it!

### Step 3.1 – App.blade.php

Within the `<style>` call in the `<head>` section, add in the following

```
.page-item.active .page-link {
color: #fff;
background-color: var(--bs-primary);
border-color: var(--bs-primary);
}
```

Scroll down to the Footer section and replace the code

```
<!--begin::Copyright-->
<div class="text-dark order-2 order-md-1">
<span class="text-dark fw-semibold me-1">2024&copy;</span>
<a class="text-gray-800 text-hover-primary">{{ config('app.name') }}</a>
</div>
<!--end::Copyright-->
<!--begin::Menu-->
<ul class="menu menu-dark menu-hover-primary fw-semibold order-1">
<li class="menu-item">
<a href="https://creationweb.uk/services/phpvms-website-design/phpvms-creation-crew-center/"
target="_blank" class="menu-link px-2"> Framework by Creation Crew</a>
</li>
<li class="menu-item">
<a href="https://github.com/FatihKoz/" target="_blank" class="menu-link px-2"> Enhanced with Disposable
Modules</a>
</li>
<li class="menu-item">
<a href="http://www.phpvms.net/" target="_blank" class="menu-link px-2"> Powered by phpvms</a>
</li>
</ul>
<!--end::Menu-->
```

*Replace with*

```
<!--begin::Copyright-->
<div class="text-dark order-2 order-md-1">
<span class="text-dark fw-semibold me-1">2024&copy;</span>
```

```

<a class="text-gray-800 text-hover-primary" >{{ config('app.name') }}</a>
</div>
<!--end::Copyright-->
<!--begin::Menu-->
<ul class="menu menu-dark menu-hover-primary fw-semibold order-1">
<li class="menu-item">
<a href="https://creationweb.uk/services/phpvms-website-design/phpvms-creation-crew-center/"
target="_blank" class="menu-link px-2"> Framework by Creation Crew</a>
</li>
<li class="menu-item">
<a href="http://www.phpvms.net/" target="_blank" class="menu-link px-2"> Powered by phpvms</a>
</li>
</ul>
<!--end::Menu-->

```

### Step 3.2 - Nav.blade.php

### Step 4 - Upload

From the CC 2.0 download, place the **Assets** folder in public/assets/frontend/THEMENAME/ (THIS IS NOT NEEDED IF YOU ALREADY HAVE CREATION CREW INSTALLED)

Upload the remainder of the theme files to /Resources/Views/Layouts/THEMENAME/

### Step 5 - Confirm

TBC

### Step 6 - Completion

TBC

## Version 1.8.3 Release Update Guide

### Image URL updates

Follow the guide below to fix the URL paths for the images. This is likely to be patched in 1.8.4 with a global assets update.

This is ideal to be done before uploading to your server if possible, if not this can be done whilst uploaded to your server.

Files to edit:

## Airports

- Show.blade.php

On line 11 you will find this line which calls in the header image

```
<div class="card bgi-position-y-bottom bgi-position-x-end bgi-no-repeat bgi-size-cover min-h-250px bg-primary mb-5 mb-xl-8" style="background-image:url('{{ public_asset('/assets/frontend/YOURTHEMENAME/assets/media/misc/img-1.png') }}'" dir="ltr" >
```

Go ahead and replace the "YOURTHEMENAME" with the name of your themes folder.

Once done save and done 😊 Any issues please report in Discord bugs.

## Version 1.8.2 Release Update Guide

### Auth Login Updates

Please follow this guide below to implement version 1.8.2 oAuth updates.

You will need to access your hosting installation via sftp/ftp or cpanel.

Head to your Creation Crew Theme files in '/Resources/Views/Layouts/Themenamename/'

Open the 'Auth' folder and open/edit 'login.blade.php'

Simply follow below and find and replace like for like - Once all are replaced, save and refresh the page & clear backend caches in admin/maintenance.

#### Find:

```
{{ Form::open(['url' => url('/login'), 'method' => 'post', 'class' => 'form w100']) }}
```

#### Replace with:

```
<form method="post" action="{{ url('/login') }}" class="form w100" >
@csrf
```

---

#### Find:

```
{{
    Form::text('email', old('email'), [
        'id' => 'email',
        'placeholder' => __('common.email').'.____('common.or').'.____('common.pilot_id'),
        'class' => 'form-control form-control-solid',
        'required' => true,
    ])
}}
```

#### Replace with:

```
<input
    type="text"
    name="email"
```

```
id="email"
class="form-control form-control-solid"
value="{{ old('email') }}"
placeholder="@lang('common.email') @lang('common.or') @lang('common.pilot_id')"
required
/>
```

---

**Find:**

```
{{
    Form::password('password', [
        'name' => 'password',
        'class' => 'form-control form-control-solid',
        'placeholder' => __('auth.password'),
        'required' => true,
    ])
}}
```

**Replace with:**

```
<input
    type="password"
    name="password"
    id="password"
    class="form-control form-control-solid"
    placeholder="@lang('auth.password')"
    required
/>
```

---

**Find:**

```
<button type="submit" id="kt_sign_in_submit" class="btn btn-primary">
<!--begin::Indicator label-->
<span class="indicator-label">Sign In</span>
<!--end::Indicator label-->
<!--begin::Indicator progress-->
<span class="indicator-progress">Please wait...
<span class="spinner-border spinner-border-sm align-middle ms-2"></span></span>
<!--end::Indicator progress-->
</button>
```

**Replace with:**

```
<button class="btn btn-primary btn-round btn-lg btn-block mb-2">@lang('common.login')</button>
@if(config('services.discord.enabled'))
<a href="{{ route('oauth.redirect', ['provider' => 'discord']) }}" class="btn btn-round btn-lg btn-block"
style="background-color: #738ADB;">
@lang('auth.loginwith', ['provider' => 'Discord'])
</a>
@endif
```

---

**Find:**

```
{{ Form::close() }}
```

**Replace with:**

```
</form>
```

---

## Discord OAuth Setup

Please follow this guide to setup and incorporate Discord OAuth support for Creation Crew Center.

First, you need to [create a developer application](<https://discord.com/developers/applications>) on the Discord website. If you have already created this application to use the rich presence of vmsACARS, you can use the same one.

Next, go to OAuth2 > General. Copy the client ID and client secret to be used in the configuration later. Additionally, you need to add a redirect; the URL to add is `'https://yourdomain.com/oauth/discord/callback'`

In the ``.env`` file, add the following:

```
DISCORD_OAUTH_ENABLED=true
```

```
DISCORD_CLIENT_ID='your_client_id_copied_before'
```

```
DISCORD_CLIENT_SECRET='your_client_secret_copied_before'
```

*Notice: Some servers work fine with the calls being in "" brackets. However some servers may require ' instead.*

Now, your users can link their Discord account to their phpVMS account and use their Discord account to log in. The link between the two accounts is automatically established when clicking the "Login with Discord" button on the login page. However, if the email address of the Discord account is different from the email address of the phpVMS account, it must be done manually on the profile page.

### ## Sending Private Messages

If you want to send private message notifications to your users (development still in progress), you need to create a Discord bot in the bot section of your Discord application and copy the token.

If this option is not enabled, the ``discord_private_channel_id`` field will not be filled. This field contains a unique discussion ID between the bot and the user, so it is imperative to have a bot to fill it.

Place the token in the ``.env``

```
DISCORD_BOT_TOKEN="your_bot_token_copied_before"
```
