ABSTRACT

The abstract should stand alone, which means that no citation in the abstract. The abstract should concisely inform the reader of the manuscript's purpose, its methods, its findings, and its value. The abstract should be relatively nontechnical, yet clear enough for an informed reader to understand the manuscript's contribution. The manuscript's title, but neither the author's name nor other identification designations, should appear on the abstract page. An abstract between 150-200 words and use 11 pt Times New Roman font with one space.

1. Introduction

All texts (except abstract) use **11 pt Times New Roman font with 1,15 space**. The introduction covering the background, problem formulation, objectives, research objects, urgency, research renewability, and hypotheses (if any) and is equipped with a clear reference of the source. The use of footnotes is not permitted. Symbols/symbols are written clearly and consistently. Abbreviations must be written in full the first time they are mentioned, after which a short word can be written.

2. Literature Review

Contains a **maximum 1500 words** by presenting the state of the art in the field under study. Images can be made in JPG / PNG format and tables may not be in JPG/PNG form with one space, which is then inserted in this field relevant primary references/references and prioritizing research results in the most recent scientific journals and/or patents. It is recommended to use the references of the last 10 years from credible, valid, and trusted sources. writing tables and figures as follows:

Table 1. Data dimensions of leg height in xxx position
(minimal 9 pt if big table and use one space)

No	Size	Total	Percentage
1	81-85	3	30%
2	86-90	4	40%
3	91-95	3	30%

Source: Data processing

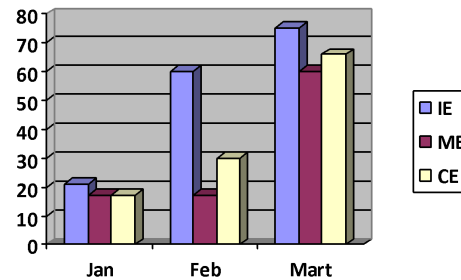

Figure 1. Total voters
 Source: Data Processing Results

3. Methodology

Section describes the steps followed in the execution of the study and also provides a brief justification for the research methods used (Perry et al., 2003:661). It should contain enough detail to enable the reader to evaluate the appropriateness of your methods and the reliability and validity of your findings. Furthermore, the information should enable experienced researchers to replicate your study (American Psychological Association, 2001:17). The methodology section typically has the following sub-sections:

- Sampling (description of the target population, research context, and units of analysis; sampling; and respondent profile)
- Data collection Measures (Alternatively: Measurement)

4. Results and Discussion

For In this section, please explained with clear and detail the results of research and at the same time is given the comprehensive discussion. Results can be presented in figures, graphs, tables and others that make the reader understand easily. The discussion can be made in several sub-chapters.

5. Conclusion

The author presents brief conclusions from the results of research with suggestions for general readers and advanced researchers. **Do not replicate the abstract as the conclusion.** A conclusion may review the main points of the paper.

References

Each manuscript of the reference list should contain all the data necessary to check for obscurity. reference list should come from sources of international reputation such as Scopus, WOS, or accredited journals Science and Technology Index (SINTA 1-4) by the Ministry of Research and Technology / National Agency for Research and Innovation of the Republic of Indonesia. The format used refers to the APA model developed by the American Psychological Association. Creating a reference list must use one of the tools, for example: Mendeley, Zotero, or EndNote.
