

DRIVE WATCH PRIVACY

Privacy Policy

Effective date: May 2025

OVERVIEW

Drive Watch is designed to work entirely on your device. This policy explains what data the application uses, how it is handled, and the choices available to you.

The short version: all information you enter into Drive Watch stays on your device. We do not collect it, transmit it, or store it anywhere outside your phone.

INFORMATION WE DO NOT COLLECT

Drive Watch does not require an account. You do not provide us with your name, email address, phone number, or any other identifying information when you use the application.

We do not collect location data, device identifiers, usage statistics, diagnostic reports, or any behavioral analytics. There are no third-party analytics SDKs, advertising networks, or tracking frameworks embedded in the application.

DATA STORED ON YOUR DEVICE

Everything you create inside Drive Watch — routes, trips, traffic notes, and expense records — is saved locally using your device's built-in storage. This data never leaves your device through the application itself.

If you use iCloud backup, device backups may include application data as part of your personal iCloud account. This is governed by Apple's own privacy policy and is subject to the settings you have configured in your device.

NOTIFICATIONS

If you choose to enable notifications, the application will request permission through the standard iOS system prompt. Notifications are scheduled and delivered locally on your device. No notification data is sent to external servers.

You can disable notifications at any time through iOS Settings.

DATA EXPORT AND DELETION

You can export your data or delete all stored information at any time from within the application settings. When you delete your data inside the application, it is removed from your device's local storage immediately and cannot be recovered.

Uninstalling the application will remove all locally stored data associated with it.

CHILDREN

Drive Watch does not knowingly collect any information from users under the age of 13. Because the application does not collect any personal data at all, it presents no particular risk to younger users. The application is not directed at children.

CHANGES TO THIS POLICY

If this privacy policy changes in a material way, the updated version will be published here with a revised effective date. Continued use of the application after a policy change constitutes acceptance of the updated terms.
