What needs to change?

Workshop Part II: Potential transformation strategies for Earth-Space Sustainability Group 1: Tragedy of Space Commons scenario	
Policies by leading spacefaring nations	Stringent national policies, e.g. restrict the growth of space economies Interoperability between US and Chinese space-based systems to avoid national conflicts in space? Developing standards that companies need to meet Companies with governmental contracts need to make data / patents available
Business strategies of rich private companies	alternative business models. supply chain interrupted impact production space equi
Strategies for developing countries	Voice from broader public.
Conception of values (whose values)	pressure on private sector and governments for change of values. due regard. Incidents leading to liability issues/ court cases. Collapse of liability regime. How to avoid it goes bad. Public outreach needed. Analogy with nuclear energy/nuclear testing
