

Dear Principal Ms. Forbes,

I am writing to express my strong recommendation for the adoption of Kami as an educational tool within our school. As a [teacher/parent/community member], I have witnessed firsthand the potential of Kami to transform the way our students learn and engage with educational content.

Kami's versatility and features offer significant benefits for enhancing student learning. Key among these are:

- **Multi-Modal Learning:** Kami allows students to interact with various content formats (text, PDFs, images, videos) and express their understanding through annotations, drawings, voice recordings, and more. This caters to diverse learning styles and promotes deeper engagement with the material.
- **Collaboration and Feedback:** The real-time collaboration features enable seamless peer-to-peer learning and facilitate individualized feedback from teachers. Students can learn from each other and receive targeted guidance, fostering a supportive learning environment.
- **Accessibility and Differentiation:** Kami's tools like text-to-speech, drawing, and customizable layouts promote accessibility for students with diverse needs. This supports differentiation and ensures that all students can effectively access and process information.

I've piloted Kami with a few of my classes, and students demonstrated improved engagement with readings. The ability to highlight, add their notes, and ask questions directly on the text led to richer class discussions. My students, particularly those who struggle with traditional writing tasks, have found success in expressing themselves through Kami's various annotation tools. This has increased their confidence and led to more insightful contributions to class activities.

I am confident that integrating Kami into our educational practice would significantly enhance our students' learning experiences. Thank you for considering my recommendation.

Sincerely,

Charlene Jimoh
