TEAM GUMMY MEMBERS

O

Team Gummy is proud to introduce the Gummy 1.2.X series of ROMS.. Here you will find an overview of new options offered in the latest release.

If you are a developer from another team and want to include our features or add ons you must get approval and give proper credit before doing so

Revamped Settings and Bugfixes:

Do to the overwhelming set of options we have been working on revamping the Settings menu. In this release you may find a few things moved around.. Lockscreens has been split into two separate sections Styles & Settings..

Also fixed was was the ICS Stock music widget. Now the images and track information update how they should

Tmobile Theme Manager - Credit CM:

Adam Fisch: I can text myself!

GUNNY

At last second (just before we were preparing to do this release) CM release the Tmobile Theme Manager for CM9.. We stopped the release in its tracks and got to work porting it right away.. With theme manager you will be able to easily and quickly change the look of your phone and tablets :D

Volume Rocker Music Skip - Credit CM:

9:19

Automobile - Eazy-E - Eternal E

Skip / Prev tracks easily with a simple long press of the volume rocker while your screen is off :)

SMS preview in on the Lockscreen :

USB debugging connected

Select to disable USB debugging.

Connected as a camera

Touch for other USB options

Now you can preview your SMS messages on the locscreen thanks to the hard work of team mate Syaoran12

Here is a brief description of how that works from the man himself :)

This is how the SMS popup works!

They are built into the lockscreen! not an actual popup!

Will only show up on your lockscreen.

It also seems that GO SMS does not allow other SMS clients to intercept messages and will not let this one work either.

Sorry to those who use GO SMS, but It does work with Handcent.

Settings options:

Enable

Custom App (you can use any app but this is more to be used with 3rd party sms apps)

Text color

You will get popups:

Phone is locked

Phone is unlocked and you do not read it

You will not get popups:

If you read your sms while unlocked

Music player widget is showing

This only (currently) shows the newest SMS you receive.

This does not show MMS (yet, might look into it later).

You can tap on the popup to load your SMS app.

You can swipe left/right to dismiss the notification (this does not mark your sms as read).

Inline Kernel Support :

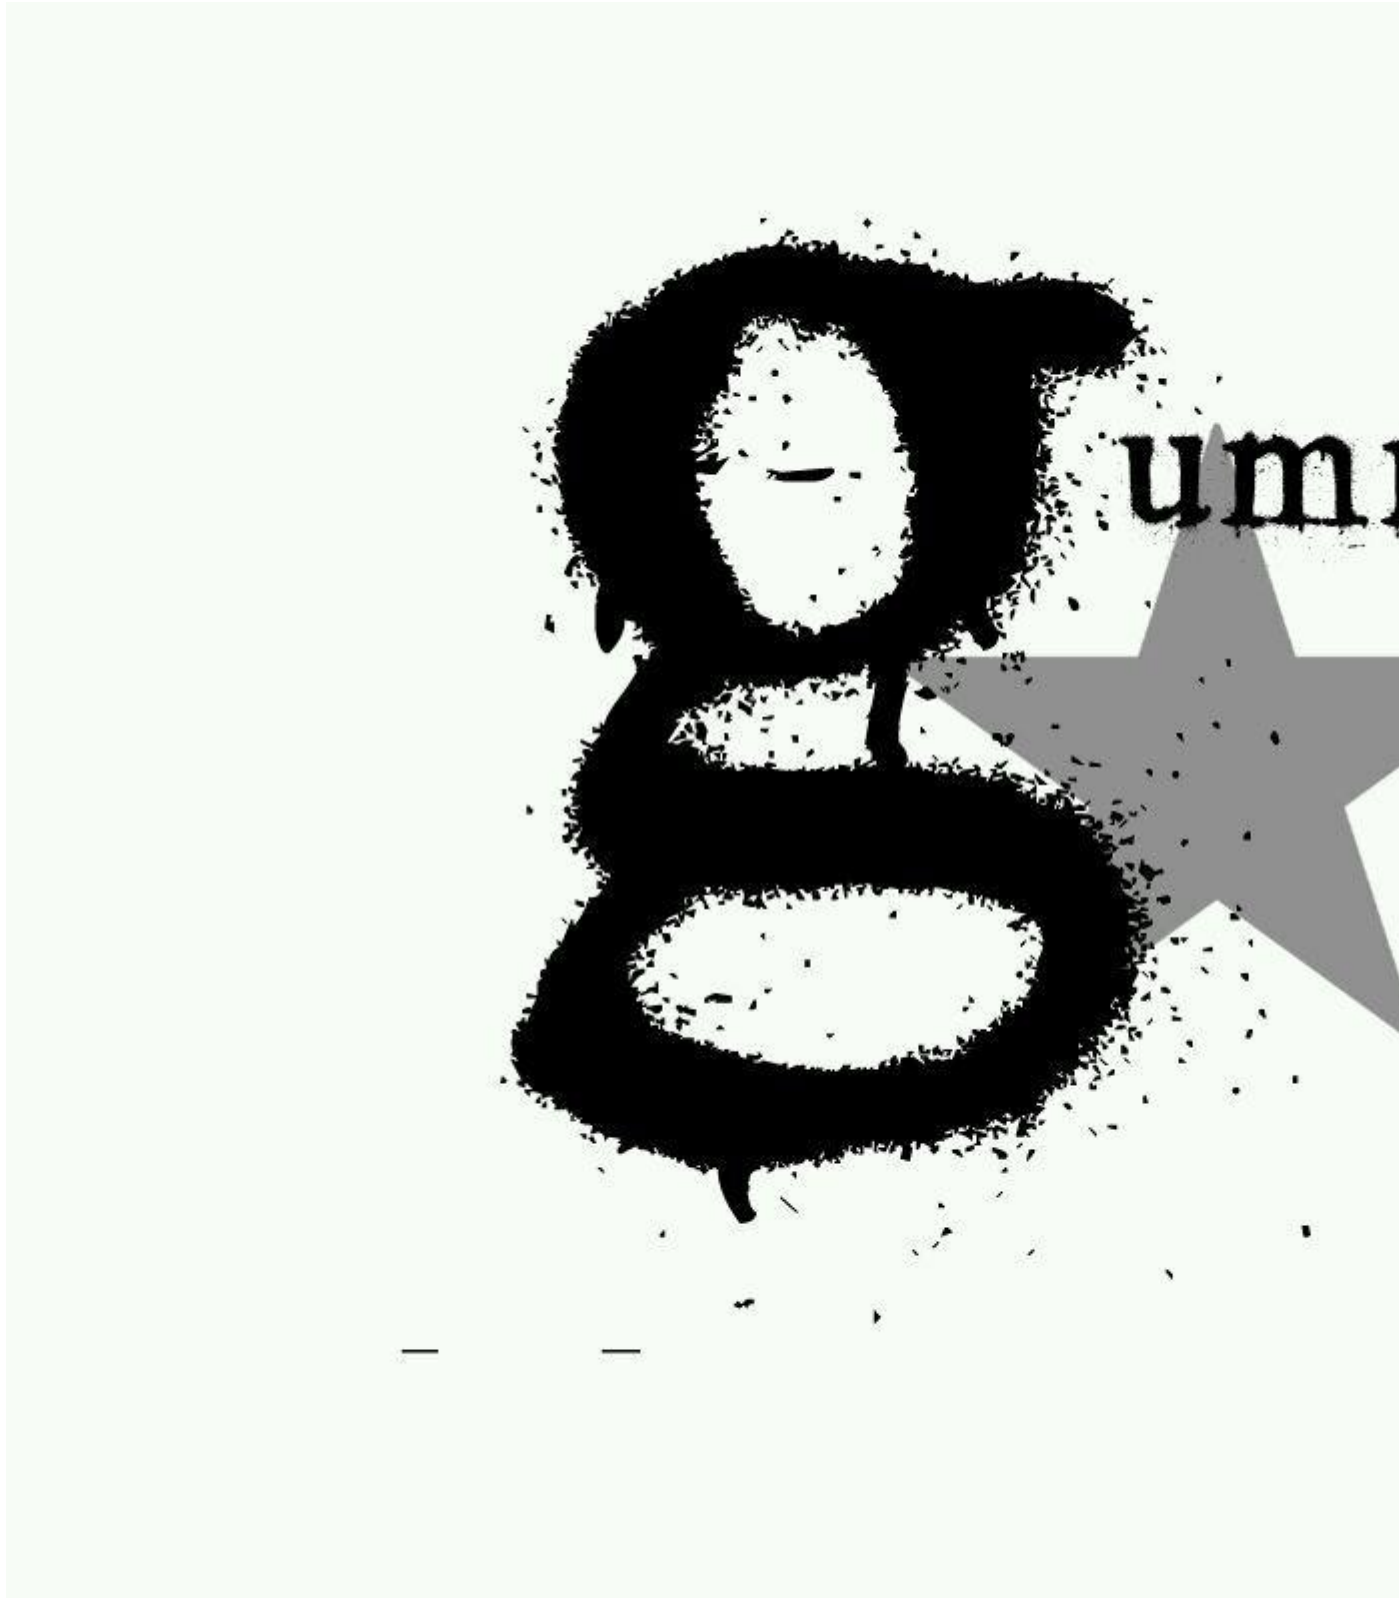

For phones / tablets with supported kernels (AKA not the Moto phones) you may notice that the kernel name is off from what you are used to seeing. This is because we compile the kernels at the same time we compile the ROM.. By all means we still use Glitch, Lean kernel etc... We simply point directly to their repository on GitHub.. This will always ensure that the kernel is up to date and that the ramdisk is fully supported by Gummy.. By all means you are welcome to change the kernel but we strongly believe you will receive the best experience with the one included in the ROM :)

Updated GummyPapers :

GummyPapers has been updated with new wallpapers by Mobile Sensei.. IMHO they look awesome :) Enjoy

About Gummy:

Gummy now includes a new About Screen within Gummy Settings. Within this section you can find links to our home page and our source code.. You can also find links to the team member's twitter accounts. Last but not

least you can find donate links for the primary dev's.. Not to sound as though we are complaining (as we do this for fun) but creating Gummy take a lot of time. Getting a donation is great motivation to keep our quick pace forward in development. So please if you enjoy our work donate as it very much helps the project grow in features and expand to new devices.
