

AI Automation

Scenario: A mid-sized real estate business is struggling keep up with the speeding growth of the business due to feeling overwhelmed by handling manually processes of the business which leads to not having enough time to focus on the growth of the business

Pains:

- The business is seriously overwhelmed by having to manually handle the processes of the business as the business significantly grows
- This leads to burnout and the inability to focus on creating effective or efficient methods to help the business keep up with the rapid growth due to having to do repetitive and manually boring tasks

Desires:

- The business wants to be able to focus more on catering for the rapid business growth by taking most of their time and attention on creating new business methods or scaling in on what they already have
- They want to do this by having all the processes they need to get automated, get automated so that all their time, energy and attention focus on the growth of the business

Roadblock:

- They don't have systems in their business to help them out with the repetitive and mundane tasks
- They are unsure which AI tools would best solve their problem and don't even know how to use AI tools to solve their problem.
- Aren't able to diagnose the business fully and implement the AI solution or even have the ability to maintain it post-implementation

Solution:

- Hire a AI Automation Agency to help diagnose the businesses' needs and recommend AI tools that need to be used and from there implement those AI systems into the business to help them solve their problems and get them to their dream state
- Having the AAA maintain the systems post implementation and also diagnose what other areas of the businesses' processes might need to be automated

Product:

- Getting a AI expert that deals with real estate automation and has produced results for previous real estate agencies, to diagnose your business and provide you with path to moving forward and achieve the desired goal
- He creates a personalized solution for you based on what you
- Is confident and flexible enough to play around with different solutions until the customer is happy
