Efforts to Prove Contagiousness

With all of the observed clinical and epidemiological evidence pointing to the likelihood that the 1918 pandemic influenza was highly contagious and spread from sick to well easily and apparently at the very first available opportunity, one would have anticipated that proof of its contagiousness by transmission tests in human volunteers would have been extremely easy. However, such did not prove to be the case: in not a single controlled experiment was it possible to demonstrate the transmissibility of the disease.

12-06-2021: Covid-19 Myths EXPOSED - Scientists Prove SARS-COV-2-(Covid-19) Does Not Exist

<https://www.bitchute.com/video/VI71rgRiv13h/>

How can "virologists" assert that "viruses" require cells to replicate if they have never found what they think are "viruses" in samples taken directly from human beings. Wouldn't you first have to find what you think are "viruses" in order to determine such thing, so to claim that something requires something you would first have to show that your something exists right?

The "virologists" always assume that "viruses" are in the samples taken from human beings without ever proving it hence thereby showing that they are not scientific in their approach. They admit their lack of scientific foundation when they state this: "The definition of 'isolation' provided in the request is outside of what is possible in virology".

Smallpox debunked

https://docs.google.com/document/d/1mUfj-L3ww3s_9SZNDoHUN_iGq0ZaW6p0EOhThoRfcZ0/

Smallpox. Just this word alone makes us shiver. In 1958, despite the Cold War, the Soviet Union, the United States and other countries united to rid the world's population of this terrible disease. All conflicts and turmoil between the heads of these powers were set aside in order to focus joint efforts on vaccine production and supply, especially to developing countries, where the problem of smallpox was of greater concern to them than hunger, water pollution and lack of necessary resources.

It was smallpox and the massive campaign of its "eradication" it that finally popularized vaccination even in the most remote corners of our world, and vaccine advocates always pull out the trump card of smallpox "eradication" in debates with those who doubt the necessity of these procedures.

This video dispels not only the popular myth about the existence of the smallpox virus, but also the myth about the existence of smallpox as an independent disease and its "eradication".

ii) **Statement on Virus Isolation (SOVI)** by Dr Andrew Kaufman MD, Dr Thomas Cowan MD and Sally Fallon Morell

<https://andrewkaufmanmd.com/sovi/>, <https://drtomcowan.com/sovi>

Tom Cowan "let's be very clear, though, on the next point. It isn't that it is technically impossible, or even difficult, to isolate any particle the size and shape or characteristic of a virus from a fluid sample. For decades, for example, scientists have isolated identical particles (called bacteriophages) from bacterial cultures and showed pure samples of these particles under the electron microscope. In this case, all particles from one culture are morphologically identical, all are made of exactly the same proteins, and all have identical genetic sequences.

The steps to isolate a particle the size and characteristic of a virus are also straightforward and not unlike how a chemist would isolate caffeine from a coffee bean. First, you take a sample of whatever fluid you

wish to examine. Then, you macerate it (as in a blender) and filter the sample through a filter paper that allows anything soluble, including any particle the size of a virus, to pass through the paper. After discarding the cells, fungi and bacteria, you put the remaining fluid on some-thing called a “sucrose density gradient,” which separates it into bands by molecular weight. This process is called ultracentrifugation.

With ultracentrifugation, the virus in question spins out into a band. The band can then be extracted from the gradient with a micro-pipette and checked for purity. In this way, you can confirm that the only thing in the band is the virus. You can then study the virus, determine its exact morphology and sequence its entire genome. Most importantly, you can then expose test animals to this isolated, purified virus to see whether they get sick.

These steps are the way science is supposed to work. One isolates the variable—in this case, the virus—and then characterizes the make-up of the virus. Once one is certain of the existence of the pure virus, test animals can be exposed to it. Yet this simple, doable experiment has never been successfully done for even one so-called viral disease, and it has certainly never been attempted for COVID-19 and SARS-CoV-2. Not even once”.

7 arguments by Dr Stefan Lanka, each argument is enough to refute the virus claim:

<https://wissenschafftplus.de/uploads/article/wissenschafftplus-virologists.pdf>

1. The fact of Alignment (no isolation of the full genome)
2. The fact of the lack of control experiments for alignment
3. Alignment is only done by means of mental constructs
4. Viruses have never been seen in a human/animal/plant or in liquids thereof
5. The composition of the structures that are claimed to be viruses has never been biochemically characterized
6. Electron microscopic images, which are output as viruses, are known typical artifacts or cell-specific structures
7. The animal experiments of the virologists refute the virus-existence assertions

3) Is the Germ Theory scientifically proven?

The myth of Louis Pasteur

These two books show that Louis Pasteur ("father of the germ theory") committed scientific fraud in his research to the germ theory and vaccination:

- ***Béchamp or Pasteur? A Lost Chapter in the History of Biology*** - Ethel D. Hume / R. Pearson (1923/1942) [Link](#) [Internet Archive](#) - <http://whale.to/a/b/pearson.html>
"Nothing is lost, nothing is created ... all is transformed. Nothing is the prey of death. All is the prey of life." – Antoine Béchamp
Reviews
"It's strange to realize that the two parts in this book actually were printed way back, respectively in 1923 and 1942, so why has the truth about Pasteur and the vaccination been buried for so long?"
"Modern medicine needs to return to this bifurcation point and take the pleomorphic path. When this phenomenon is truly understood drugs poisons will disappear as do all things which outlive their usefulness. This book is required reading for anyone choosing to understand how the body heals."
"A very interesting look at two rivals in science. Pasteur, who touts the germ theory of medicine, and Bechamp, who had a broader theory of health and medicine much akin to the current Microbiome theory of medicine."
- ***The private science of Louis Pasteur*** - Geison (1995) (Princeton Legacy Library) [Link](#)
"In *The Private Science of Louis Pasteur*, Gerald Geison has written a controversial biography that finally penetrates the secrecy that has surrounded much of this legendary scientist's laboratory work. Geison uses Pasteur's laboratory notebooks, made available only recently, and his published papers to present a rich and full account of some of the most famous episodes in the history of science and their darker sides--for example, Pasteur's rush to develop the rabies vaccine and the human risks his haste entailed. The discrepancies between the public record and the "private science" of Louis Pasteur tell us as much about the man as they do about the highly competitive and political world he learned to master."
