

Technology Matrix

Assistive Technology is constantly changing. In education we cannot grab hold of a product and think it's ours forever. There is a good possibility that there are similar products on the market or, our product will be discontinued. Given this reality, we are creating a technology matrix as a system of evaluating current Assistive Technology tools. We use the following elements to evaluate Assistive Technology.

1. Is it user friendly for both instructors and students
2. Is it accessible
 - a. Cloud based, free for users
 - b. Flexible for different learning needs
3. If it's discontinued can teachers still access their uploaded material
4. Does it reach students in a new way
