

Windows 11 compared with Windows 10

Differences (some of the more obvious ones)

- Centered Start button and Task Manager
- Windows Hello biometric login
- Better hardware-level security (the major reason some computers can't be upgraded from Windows 10 to Windows 11)
- Start Menu completely different - pinned apps are icons arranged in a rectangle instead of a list
- File Explorer format differences
- File Explorer right-click and icon differences
- Increased ability to customize Toolbar in Chrome

Before updating to Windows 11

- Backup if needed
- Check to see if attached devices, such as printers or scanners, work with Windows 11
