## [ BASIC RESOURCES ]

Due to the Furian war furthering the dwindling of supplies and resources , the Grand Entente

ironically achieved their opposite goals: to add their resources to stabilize energy production and mobility for 10+ years. Now with fossil fuels the likes of oil and natural gases spent on the war dwindled to 5+ years left with estimates on the global supply.

Uncontrolled deforestation , mass underground extraction , pollution , soil depletion and mass fishing/hunting had also led other groups of resources to dwindle quickly as food and gas prices hit the ceiling. A massive famine occurring in poorer areas spreads rapidly as the central government does little to feed hunger as internal crisis ensues.

Criminal organizations took advantage of the chaos as resources and basic needs became scarce, an underground trading route bypassing the government rationing booms in profits.

## [ GOVERNMENTAL COLLAPSE ]

Immediately after the defeat of the Grand Entente during the Furian war , multiple parties had questioned the security of the Government itself if it still could not hold the colonized nations in place and lose to an Island at the same time. Multiple parties had called for radical priority reformation and some suggested pulling personnel from colonies to focus on matters in the nation itself.

Multiple leaders and top brasses resigned and fled to avoid responsibility along with suspiciously expensive checks , supposed to aid and solve the ensuing crisis , in their pockets. with multiple people pulling out of the governmental structure and not enough people to manage multiple sectors the foundation began to collapse. The central government , bankrupt and missing any funding to execute any plans or

actions had been crippled of its powers and stripped of its control overseas as high command scrambled , leaving no communication on what to do next.

The NEC and the GYA had pulled out of trade and economic reliability from the Grand Entente , undergoing an equally chaotic crisis of economic unplugging but for a shorter period of time as they managed to hastily create a short-term system that connects Furia with the rest as a economic web. leaving the Grand Entente economies in shambles with no support whatsoever.

## [ OVERTHROW OF COLONIALISM ]

Multiple countries under the Grand Entente rule , Especially those in the South Americas , the Middle east , Africa and certain parts of Asia , had multiple rebellion factions across both colonies and alliance blocs , but still disconnected and scattered.

Multiple smaller fighter groups went against the Grand Entente and had the Three nations expand their most-abled personnel to combat the resistance fighters. Intensifying the conflict little by little to drive the security and patrol personnel from the Grand Entente's homelands to further allow a window for vulnerability to appear internally and externally.

With one incident of a mass uprising , more organized and better armed than the usual Flashfire rebellion , the other factions saw the Entente's weakness and pounced to seize the opportunity of a more-guaranteed successful rebellion as multiple rebellion factions pushed their resources for this moment. official government buildings , either foreign or internal are taken by force to put up a new government and to separate independently from the puppet government and declare itself a separate and sovereign state. willingly declaring war with the Grand Entente.

But with the amount of uprisings across the world , from the stretches of South America to the dunes of the Middle east. The Grand Entente's personnel were too stretched far out and were outnumbered , multiple personnel were captured or killed due to the sheer number of rebels and the sporadic chaos along with the absence of high command and the scarce supplies leading to dried-up ammunition with hungry and tired troops.

Former colonies are now independent, but their independence is in utter chaos with no clear structure replacing the old regimes. and with bureaucratic red tape and multiple forms of politics embedded in paperwork , technacity of rule is still being figured out to be recognized or outright ignored.

## [ WORLD CONDITION ]

Resources are scarce , Basic needs had been inaccessible for many, the Government had fled along with their cash , The colonies had risen in suppressed anger , Crime had run rampant in the absence of official personnel.

The average human citizen now has to defend themselves , the absence of authority has led multiple cities to run wild with virtually no consequences. citizens took up arms , some had upheld vigilante organizations while others waged conflict with neighbours along the urban areas to secure resources.

## [ DEVELOPING TECHNOLOGY ]

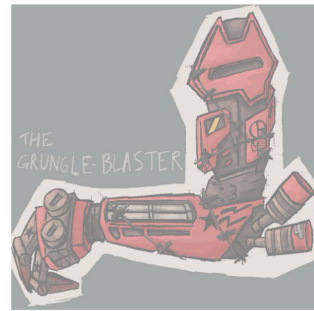

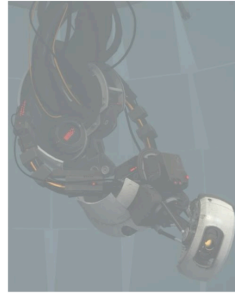

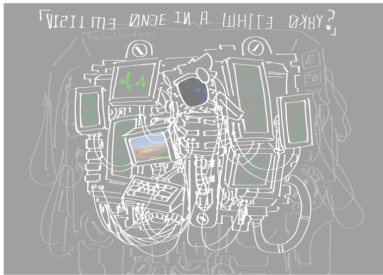

The process of Nuclear fission was only recently heavily invested into to address the crisis of depleting energy production by the Grand Entente. and inevitably , atom-splitting bombs were discovered as a side effect. Unfortunately along with the production of uranium and potassium enrichment for use in reactors , some portions of the batch were transported for atomic bomb production also. Though nuclear weapons come in the form of “Dumb Bombs” with silos being chemically reliant explosives instead

The main discussion among the remaining high command is whether to use the bombs on the former colonies as a last stand against the rebellion. whereas one faction has spoken against using weapons of such magnitude while the majority had supported the usage of such weapons to either an limited extent or a total annihilation of the enemy.

## [‘ARLO’ SUPERCOMPUTER]

Redesigning...

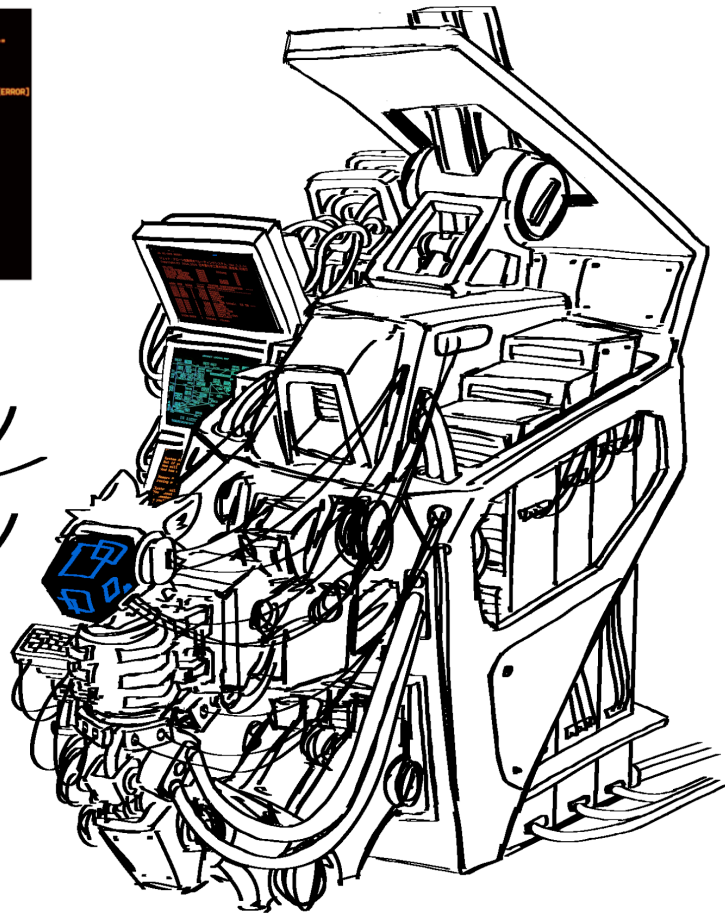

(O.P.X)

```

WARNING: Memory reset protocol initiated.
[System Alarm]
"but if you erase my memories, how will I learn from my mistakes?"
"how will I continue to grow?"
"and how will I remember you?"

[A.R.L.O.]  
Supercomputer

In a desperate bid to end all of the ensuing crisis, the Grand Entente government had continued to funnel funding on an earlier project during the war.

A.R.L.O. – Autonomous Recursive Logistics Overseer

An advanced supercomputer designed for global military strategy with a few components taken from the progenitor chassis for the life-support system, combining defense and offense strategies. It utilizes organic brain-matter augmentation with a singular unwilling captive as a Furry prisoner serving as the core neural memory storage, their consciousness exploited for maximum efficiency.

A.R.L.O. operates through self-improvement, adapting tactics, predictive modeling and strategic countermeasures. Its organic component provides constant nonlinear thought processing , enhancing its ability to anticipate enemy actions beyond traditional AI limitations.

Contained 30 floors deep in a facility complex in the forests of Verdun , France. Currently being meticulously wired into automated military hardware (missile silos , AI-operated vehicles etc.) the process is estimated to complete in 6 months as a last-ditch effort of an advisor and operator to 'Control' and 'Eliminate' the violence.

The furry isn't in control per-se (IF the sloppy code somehow prevents him from doing so). They only act as a memory storage unit and a calculating powerhouse for the separate ARLO supercomputer entity with his own memories being co-contained alongside , though he can still communicate and move his 'Body' around.

The host itself is a Child of Furian immigration , Taken from an Furian internment camp via a recent executive order initiated by the French government. where French-Furian citizens were relocated and incarcerated into internment camps across colonized Europe. From official records , His full name was Benignus Nerva. His family moved to France in 1982 as immigration records show the reason for "Finding work". After transporting the Child from an internment camp in occupied Belgium back to France , Further into a closed facility in Verdun. He was checked and then modified to be fitted into the ARLO supercomputer to fill the role of the main memory and computing unit.
