## PREFACE

-  
Dear seeker of a solution to your illness

-  
This kind of treatment is free, easy, safe and reliable. The solution is based on the methods of dr. Grigori Grabovoi. According to these methods, the practitioner uses his **concentration on a treatment code** that is appropriate for the treatment of a particular disease, together with the **concentration on the treatment target**. Everything else is done by microcosmic and macrocosmic quantum laws using the recommended conscious concentration. Dr. Grabovoi calls this concentration **process information management**. Thus, we can normalize the state of health, but we can also normalize any other state, or event, resulting in a canonical state.

-  
Man is, by definition, a creature of all possibilities. Grabovoi's quantum-information technologies enable us to start harnessing our innate potentials and capabilities.

-  
Unfortunately, many people marginalize the proven effectiveness of Grabovoi's methods by assuming a placebo effect. But what is the physical essence of placebo? Anyway, Grabovoi's codes are mathematically determined, presumably based on fractals.

## Ankylosing spondylitis in general

### 1. Symptoms and signs

#### Ankylosing spondylitis (Wikipedia)

[https://en.wikipedia.org/wiki/Ankylosing\\_spondylitis](https://en.wikipedia.org/wiki/Ankylosing_spondylitis)

-  
It is a rheumatic disease that can occur with several other rheumatic diseases at the same time. Ankylosing spondylitis is a disease which affects the spine and sacroisical joints. The disease is more common in men. The location of autoimmune inflammation may be limited or several parts may be affected. It can appear at 20 or earlier. An expected consequence of spondylitis can be degenerative changes in the vertebrae of the spine and the joints of the pelvis (osteoarthritis). Spondylitis and the resulting degeneration result in nerve compression.

-  
Inflammation also directly affects nearby peripheral nerves. The resulting symptoms are sensory and motor disorders, as well as pain on various parts along the affected peripheral nerves. The location and intensity of symptoms depend on the degree of nerve involvement. External nerve fibers belong to nearby parts of the body, while internal ones belong to distant parts of the body, which indicates the pathological condition of the nerve through the location of the symptoms.

-  
A characteristic of the symptoms is that they occur when we change our body position and then decrease or disappear when we move. An extreme consequence of untreated ankylosing spondylitis may be the stiffness, ossification and immobility of the affected joints. In the elderly, humps and other deformities of the spine may be seen. The disease may have several other atypical symptoms, such as fatigue, numbness, stiffness, poor appetite, and a slight fever. One of the more common forms of the disease is the so-called '**sciatica**'. Pain and numbness can go as far as the foot. It is ankylosing spondylitis of **pelvic and lumbar regions**.

.

Diagnosis of spondylitis complicates the interplay with signs and symptoms of other rheumatic diseases present, as well as possible symptomatic and psychosomatic conditions. Symptomatic & psychosomatic conditions can be solved with Grabovoi's psychological norming codes. Additional attention should be paid to fascia with appropriate physical exercise, or treat polymyalgia – fibromyalgia. The central nervous system also requires attention – polyneuropathy.

## 2. Treatment of ankylosing spondylitis by the methods of dr. Grabovoi

ANKYLOSING SPONDYLITIS 4.891.201

Concentration on Grabovoi's healing number series 4.891.201 for ANKYLOSING SPONDYLITIS is performed for treatment. This means that we are projecting the numbers of specific code in silver-white light into the diseased spot in a consistent sequence from the first to the last number. Dots represent a pause of one character in length.

Numbers can be imaginatively arranged directly into the disease space. Alternatively, we can use the idea of a sphere into which we project a number set. The sphere surrounds the disease zone and brings information correction with a number string. The numbers can be projected onto the inner surface of the sphere in the direction of the clock.

## 3. How long to heal?

The healing concentration is repeated several times a day. We continue the procedure for some time after the symptoms have completely and definitively disappeared. The time required for recovery depends on the intensity of the concentration, the frequency of daily recurrences and the state of the disease. **At my one year chronic phase of the disease, with pain symptoms, it took me about 2-3 months of daily concentrations to eliminate the disease. In the acute phase, the concentration was performed for up to 8 hours a day. Before I spent 1 year to find diagnosis.**

## 4. Treatment of some consequences of ankylosing spondylitis (AS)

MONONEUROPATHY 4541431

OSTEOARTHRITIS 8145812

RADICULOPATHY 5481321

ANKYLOSIS 1848522

At sites of autoimmune inflammation, a healing number array for nervous system is used. The appropriate choice is MONONEUROPATHY. This is a code for the treatment of an individual affected peripheral nerve. We also use other numerical series at the sites of AS disease and not at the sites of symptoms: radiculopathy for nerve compression, osteoarthritis-arthrosis for degenerative changes, ankylosis for immobile joints.

## Ankylosing spondylitis of the cervical spine

In the mild (initial) phase of neck spondylitis, in addition to stiffness and cracking, occasional tingling in the palms can be observed, such as when riding a bicycle. Occasionally, short-term paralyzing pain may start to appear, such as in the little finger or any other finger. This may be similar to sciatica, but not a headache. Cervical spondylitis, in addition to headache, may be accompanied by pulmonary autoimmune indications.

Headaches may be due to the action of spondylitis on the cervical vascular system and fascia, or due to rheumatism of the neck veins. Solutions to the presented aspects of spondylitis are included in the entries for headaches, radiculopathy, polymyalgia, polymyositis, systemic - pulmonary indications, and temporal arteritis.

## Lungs, neck veins, headache, eyes, brain & ankylosing spondylitis of the cervical spine

-  
Cervical spondylitis can have 2 dangerous associated (consequential?) rheumatisms. The lungs can be affected by diffuse connective tissue disease, and the neck blood vessels by temporal arteritis. A possible consequence of the combination of the two is a **throbbing headache when coughing**. Disruption of the blood supply to the head due to autoimmune involvement of the neck blood vessels causes brain damage and deterioration or loss of vision. I solved the described combination of symptoms and diagnoses on myself with the following Grabovoi's healing codes.

-  
TEMPORAL ARTERITIS                   9.998.102  
ANKYLOSING SPONDYLITIS            4. 891.201  
DISSEMINATED CONNECTIVE TISSUE DISEASE 5485812
