

# A MODULAR UPGRADE FOR GLOBAL GOVERNANCE

EXECUTIVE PROPOSAL • WORLD PEACE ALLIANCE

## The Problem: Legacy Systems are Stalled

Our current global institutions (built in 1945) do not meet the needs of a modern era. We face systemic collapse across several core dimensions:

- **Borderless Threats:** No single country can stop global threats like rogue AI, systemic financial crashes, or planetary climate collapse on their own.
- **The Stalemate:** The international community remains stuck between national unilateralism and global paralysis.

## The Solution: A "Modular" Upgrade

We propose an open, step-by-step upgrade to the system focused on environment and Emergency liquidity, based on two simple, unalterable design rules:

### Rule A: Strict Local Control (Subsidiarity)

The global layer is legally banned from touching domestic affairs.

- What stays local: Nations keep 100% control over their culture, economy, religion, schools, local laws, and domestic taxes.
- What goes global: Only issues that have no borders, such as environmental global carbon accounting/credits and emergency financial liquidity. By standardizing and leveraging carbon credits, we propose to transform environmental challenges into economic opportunities.

### Rule B: The Double-Key Voting System

A voting power is calculated through a possible balanced formula. A nation's vote weight is tied to equal factors:

1. Share of Global Population
2. Financial Contributions to global stability and security funds

**Proposed Action:** We propose a diplomatic side event at the upcoming G20 Summit and a parallel technical briefing during the UN Environment Assembly (UNEA) to sandbox this emergency financial liquidity and standardized carbon credit architecture with key finance ministers, state sherpas, and environmental policy architects.
