Adapt Engine Delta - Release Notes

May 2021

2020.2.43 Delta Release 2021-May-07

2020.2.43 Description	Release Notes	Issue ID
A fail-over method is required for accessing a user's IP address.	The Wildfly config file (standalone-adapt.xml) has been updated to add a flag that will use the ***REMOTE_ADDR*** or ***X-Forwarded-For*** headers to determine the client's IP address. This has a purpose when the Adapt server is behind a load-balancer that provides the client IP via one of those headers.	AD-11158
Saved Results: A system error appears after selecting some rows and running the 'Show Availability' option.	A bug has been fixed where a system error occurred when navigating to the Availability Calendar from a search result after selecting one or more rows, not including the first row.	AD-11194
The pagination bar does not display correctly inside the Availability Calendar.	Pagination for selected entities now works in the Availability Calendar.	AD-11195
When Synchronizing Tasks or Calendar items, a date range can be selected from the '***Quick Sync Options'*** drop down list in the ***Synchronize Tasks*** dialog box, but it does not work as expected.	Issues with the date ranges used for synchronizing tasks have been resolved and the ***Quick Sync Options*** will now work as follows (based on today's date of 6th May 2021): • **Today** = From 06/05/21 TO 06/05/21 • **This month** = From 01/05/21 TO 31/05/21 • **The next month** = From 01/06/21 TO 30/06/21 • **The next 3 months** = From 01/06/21 TO 31/08/21 • **The next 6 months** = From 01/06/21 TO 30/11/21 • **The past month** = From 01/04/21 TO 30/04/21 • **The past 3 months** = From 01/02/21 TO 30/04/21 • **The past 6 months** = From 01/11/20 TO 30/04/21 • **This year** = From 01/01/21 TO 31/12/21	AD-11202
The ***LinkedIn RSC*** *Authenticate* button is greyed out.	An issue preventing authorisation with Linkedin in Adapt has been resolved.	AD-11205
The ***Print Me*** pop-up window run from Search Results appears blank.	A problem has been fixed where certain attributes would prevent the print results dialog box from appearing properly.	AD-11207

A system error appears when a user tries to open the *Dashboard* page.	An issue has been resolved which was preventing the *Dashboard* fixed page from loading.	AD-11214
The pagination bar doesn't update to show the selected page number in the Availability Calendar.	The pagination controls for the Availability Calendar now reflect the page being viewed.	AD-11219
When using ***NOT*** syntax in Search Words as part of a formal search (i.e. Candidate Search), the results don't appear to complete.	**NOT** conditions are now correctly formed in the queries which are built.	AD-11221
Unable to use the ***Export as CSV*** function from some Search Results.	A problem has been fixed where having document categories in the formatter of a CSV Export caused it to fail.	AD-11239
Printing Search Results fails when more than 2000 items are selected.	An issue has been fixed when trying to print a Search Result that contains over 2000 rows.	AD-11255
