

Summit School District – Demographic and Enrollment Report

Shannon Bingham, Western Demographics, Inc., July 11, 2025

Introduction - The Summit School District (SSD) is addressing demographics and enrollment given changing birth rates, current residential growth and housing cost effects and hired Western Demographics, Inc. (WDI) to collect data and articulate findings. Districts all over Colorado are being affected by declining enrollment resulting from smaller families generated by Millennial and Generation Z populations (Generational Change).

Birth rates in SSD and State-wide are generally down and this has affected SSD enrollment and has off-set growth in the housing stock. Housing costs and the increasing tendency of local owners to convert housing to short term rentals (STR's) have had a tremendous effect on families' ability to live in the County.

According to the 2023 Housing Assessment, significant numbers of local employees are commuting from outside of the County. Local communities have worked to provide affordable housing options, but these efforts are offset by cost escalation and STR conversion. Since enrollment has been relatively stable and new housing has been constructed each year during the past five years, the effect on enrollment seems to be balanced by housing dynamics.

Other indicators have also shown stability. SSD imports fewer students than historically (as local affordable housing has been constructed), and on-line programs have had a slight effect, but the aggregate effect is generally level enrollment.

Enrollment at most schools is expected to remain stable except for Breckenridge elementary schools where affordable housing initiatives will attract more families to Breckenridge, reduce the number of employees that drive in from Alma and Fairplay and allow them to live locally. Middle school enrollment will remain stable while high school will decline due to smaller cohorts moving into the high school grades.

General Demographics - Total Population – All Ages – Total Population within the boundary of the district has increased during the past decade according to the American Community Survey as shown in Figure 1.

Figure 1 – Total Population in Summit School District – All Ages

Total Population – Cohort Growth by Five-year Age Group (Cohort) - School-aged population is a small portion of total population as represented by five-year cohort populations shown in Figure 2. A cohort is a group of persons in a specific age category for either one or five years that move from category to another. The preschool cohort (1102 persons) is small relative to the adult population as shown on the bottom of the graph. The age groupings for school age populations in ages 5-9 years and 10-14 years are very small relative to adult populations consistent with most resort districts. The small preschool and school-aged population cohorts indicate that the community should not expect significant enrollment growth associated with residential growth due to the small share of total population representing families.

Figure 2

Demographics - Births Overall – The annual volume of babies born in the district increased as the housing stock grew through 2008 and then began to decline. The past fifteen years have shown decline as shown in Figure 3. This trend is typical of birth trends elsewhere in the State, especially in resort districts.

Figure 3

Births by School – All elementary schools have had stable or declining birth counts.

Figure 4

Grade Size SY19_20 vs. SY24_25 Enrollment by Grade – The graph shown in Figure 5 compares the enrollment five years ago to the current year enrollment in every grade. Enrollment has declined in every grade kindergarten through ninth grade but

has increased in preschool and grades 10, 11 and 12. These larger high school grades are expected to leave the high schools and be replaced by smaller incoming middle school grades. SSD does not add enrollment historically as middle school cohorts move into high school.

Figure 5

Enrollment History and Forecast – Figure 6 shows the overall expectation of level elementary and middle school enrollment during the next eight years and the slight decline in high school.

Figure 6

Enrollment Details – The following table displays school level enrollment change over time. The enrollments are compared to capacity and no schools will exceed capacity during the eight-year period. Frisco and Silverthorne elementaries along with both secondary schools have the lowest utilization.

Figure 7 – Enrollment Forecast by School – 2025 – 2032 vs. Capacity

School	2025	2026	2027	2028	2029	2030	2031	2032	Capacity SY25 MP	SY32_33 Utilization
Breckenridge ES (PK-5)	217	219	220	223	228	230	231	232	276	84%

Snowy Peaks (Combined)	79	79	79	79	79	81	79	81	175	46%

Import / Export of Students – In addition to birth count declines and cohort change, more students have departed the district to attend adjacent districts or attend online school opportunities during the past five years. Fewer students are enrolling in SSD from adjacent districts as shown in Figure 8.

Figure 8 – Summit Sch. Dist. - Import & Export of Students SY19_20 vs. SY24_25

Large Populations Imported from Adjacent Districts – SSD does admit significant enrollment from adjacent school districts as shown in Figure 9 (partial list). Many families who work in Summit County live elsewhere, bring their students to schools close to their place of work as they commute. Figure 10 shows the adjacent districts on a map.

Figure 9 – Students Imported from Adjacent Districts

PARK COUNTY RE-2	66	61	64	54	52	64	60	63

Figure 10 – Students Imported from Adjacent Districts

Students Exported - Destination Programs and Districts – The small number of students that the district exports has grown slightly over time as online programs have grown. Figure 11 shows the growth in online programs (shown in blue type) along with the small number of Eagle County School District students that live on the edge of the district or are the children of employees riding to school with their commuting parents.

Figure 11 – Students Exported to Online Programs and Adjacent Districts

Non-public Schools / Private Preschools – The district also has approximately eight non-public schools most of which are preschools. The Peak School is the one school with K-12 programs. All of these have grown. This history is shown in Figure 12.

Figure 12 – Summit School District Non-public Schools – Colorado Dept. of Ed.

Year	2021	2022	2023	2024
All Schools Reporting	164	215	331	376

Colorado Charter School Institute (CSI) Enrollment – There has been very little CSI enrollment in the SSD.

Housing – The Summit County assessor's database indicates that an average of 324 new homes are added to the housing stock each year. The 2023 Housing Needs Assessment suggest that 440 per year are needed during the next five years and that development constraints indicate an estimated build-out in approximately 15 years. Figure 14 shows the accumulation of new housing units according to the County during the past ten years.

Figure 14

New Dwelling Annual Absorption Based on Parcel "Year Built" - Summit County - 2014 - 2023

Dwelling Type	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	Average
Single Family Detached	136	150	195	214	207	169	184	222	145	112	173
Combined Single Family Attached	247	90	61	272	148	215	130	97	143	47	145
Mobile Home Improvement	7	6	6	3	5	6	2	8	4	6	5
Total Units	390	246	262	489	360	390	316	327	292	165	324

Student Yield (Students per House Unit) – Western Demographics sampled affordable housing in the major communities and ran a student yield analysis on all units in the County to obtain market and affordable student yield rates for future housing. Affordable and workforce housing in all categories produces significantly more school children than market rate housing. Figure 15 shows the approximately 4:1 relationship between the two categories. Mobile homes are a small percentage of the Summit County housing stock and are affordable by nature therefore the market and affordable yields are the same. *SFD = Single Family Detached, SFA (Attached) = Duplexes, Townhomes and Condos, MF = Apartments, MH = Mobile Homes*

Figure 15 – SSD - Student Yield per House – Market and Affordable Categories

Density	Market				Affordable			
	ES	MS	HS	Total	ES	MS	HS	Total

MF	0.007	0.005	0.005	0.017	0.208	0.110	0.194	0.513
MH	0.093	0.070	0.123	0.286	0.093	0.070	0.123	0.286

Expected Housing Growth – Figure 16 shows community summaries of developments currently in process. These current and future developments were collected by polling the planning departments in the five communities and monitoring developments currently on the market. The 937 units inventoried represent an approximate 2.5 – 3-year supply. The expected development absorption counts were multiplied by the appropriate student yield figures to obtain a total yield over three years of approximately 267 students. This growth would have been manifested in prior years growth if it were

not being offset by growth in STR conversion and housing price escalation. These factors generally support the expectation of a continuation of level enrollment.

Geographic Issues - District Students and Schools – Enrollment is generally spread among the five communities of Silverthorne, Dillon, Frisco, Breckenridge and Summit County. There are strong affordable housing concentrations in the elementary attendance areas for Breckenridge, Silverthorne and Dillon Valley elementaries. There is less affordable housing and less potential for it in Frisco ES and Summit Cove ES.

Figure 17 plots Silverthorne elementary students (red dots), Dillon Valley students (green dots), Summit Cove students (orange dots) and Frisco students (purple dots). Figure 18 plots the Upper Blue Elementary students (yellow dots) and the Breckenridge Elementary students (red dots).

Figure 17 – Geographic Configuration of SSD Communities

Figure 18 – Geographic Configuration of SSD Communities

Conclusions – Districts all over Colorado are being affected by declining enrollment resulting from smaller families generated by Millennial and Generation Z populations (Generational Change). Birth rates in SSD and State-wide are generally down and this has affected SSD enrollment and has off-set growth in the housing stock. Housing costs and the increasing tendency of local owners to convert housing to short term rentals (STR's) have had a tremendous effect on families' ability to live in the County. Local communities have worked to provide affordable housing options, but these efforts are offset by cost escalation and STR conversion. The effect on enrollment of new housing growth in both market and affordable categories will be offset by these housing and demographic trends.

Enrollment at most schools is expected to remain stable except for Breckenridge elementary schools where affordable housing initiatives will increase enrollment, especially at Upper Blue. Middle school enrollment will remain stable while high school will decline due to smaller cohorts moving into the high school grades.
