This paper provides a template for preparing papers for electronic production of the Journal. A well-prepared abstract enables the reader to identify the basic content of a document quickly and accurately, to determine its relevance to their interests, and thus to decide whether to read the document in its entirety. The abstract should be informative and completely self-explanatory, provide a clear statement of the problem, the proposed approach or solution, and point out major findings and conclusions. The Abstract should be 150 to 250 words in length. The abstract should be written in the past tense. Standard nomenclature should be used and abbreviations should be avoided. No literature should be cited. The keyword list provides the opportunity to add keywords, used by the indexing and abstracting services, in addition to those already present in the title. Judicious use of keywords may increase the ease with which interested parties can locate our article.

Keywords:
Please provide 3-5 words of keywords separated by coma

1.   INTRODUCTION

Introduction includes background, theoretical basis, problems, problem-solving plans, and research objectives. The introduction is written using Cambria letters, size *12*, space *1,* and line spacing of *1* cm. Text is typed in a print area with *margins* from top, bottom, left, and right made **2.5cm**. A4 paper size, *8.27-inch-wide*, *11.69-inch high*. Layout: *0.5-inch header*, *0.5-inch footer*. The text *does not need* to be page-numbered.

Article Type

Articles are original articles of research results or review results from previous articles. Articles can be written in Indonesian or English. The length of articles is between 5.000–7.500 *words* including a list of references. The systematic writing of the research article consists of the title, author's name, institution and correspondence address, abstract, keywords, introduction, methods, results and discussion, conclusions and suggestions, gratitude, and reference list. The systematic conceptual article writing (containing the results of the review) consists of the title, author's name, institution and correspondence address, abstract, keywords, introduction, core part, summary, and list of references. The title of the article is written using *16-size* Cambria letters, capitalized,

*Corresponding author.
E-mail: author1@email.com

bold, Align-Right, consisting of a maximum of *15 words* and describing the contents of the manuscript. The author's name is written using the size *12* letters *Cambria,* not accompanied by any title. Names of authors from different agencies are marked using a superscript behind the name. Manuscripts are presented narratively (without numbering in front of subtitles) and presentation in the form of subtitles is avoided. The formula is written separately not in the sentence, and equipped with numbering on the right. The formula is written using Microsoft equation.

$$x + y = 2 \qquad (1)$$

The picture is inserted in the *text box* and the *figure caption* is placed below the image. The caption of the image is numbered and the image must be referred to in the text. Captions begin with *uppercase* letters. Captions of images with more than one line are written using line spacing 1. The image is drawn with a line width of 1pt and should have good contrast quality.

Figure 1. Plots of lineation (L) and FeO content showing a negative correlation

The table is created with a line width of 1pt and the table caption is placed above the table. Information on tables consisting of more than 2 rows is written using 1 line spacing. The table lines are only horizontal lines while vertical lines are omitted. Example of how to write Table 1.

Tabel 1. The Result of Study

No	Student	Score	Rank
1	Nadya	80	Excellent
2	Ardy	70	Good
3	Sonia	70	Good

2. METHODS

Contains how data is collected, data sources, and ways of data analysis.

3. RESULTS AND DISCUSSIONS

Results

Results are the main part of scientific articles, containing: final results without data analysis process, and hypothesis testing results. Results can be presented with tables or graphs, to clarify the results verbally.

Discussion

Discussion is the most important part of the entire content of scientific articles. The objectives of the discussion are: to answer research problems, interpret findings, integrate findings from research into existing sets of knowledge, and compose new theories or modify existing theories.

4. CONCLUSION

This part contains conclusions and suggestions. Conclusions include answers to research questions. Suggestions refer to the results of the study and take the form of practical actions, mentioning to whom and for what advice is intended. Written in essay form, not numerical form.

5. ACKNOWLEDGE

If any, thanks are addressed to official institutions or individuals who have provided funding or have made other contributions to the research. Acknowledgments are accompanied by a research contract number.

6. REFERENCES

The references consist of the author's name, year of publication, article title, city name, and publishing institution. The reference list is sorted according to the first letter of the author's name (A-Z). The second word in the name agreed as a family name. Authors may follow the APA 5th Publication Manual to write references. All references referred to in the text must be written in the reference list. Preferred references are articles taken from the latest journals/publications no later than 5 years before article submission (paper submission). Example of how to write references:

Books
