

Introduction

Hey, This is a list I've compiled in the hopes of archiving and categorizing as many Sprite-Based 2.5D FPS games as possible. Games that have the player freely move in 3D (True 3D) or Pseudo-3D (Ray Casting) environments, And having granular turn increments. Sprite-based meaning that all or the majority of the Weapons, Enemies, Pickups, Props, etc are 2D bitmap images. This also focuses on specifically games that are primarily shooters and of course are in the first person player perspective. There are 3 sections, Games categorized by tech and engines, Games by platforms, And the last section being shoutouts to miscellanea that don't meet all the requirements but have interesting crossovers with them. Ctrl F and type "Download" if you are looking for games that are Abandonware or Freeware to play. If a game is being sold instead, search "Buy" for a store page link. You will not find roms or disk images for retail games on home consoles (SNES, Megadrive, Saturn, PS1, GBA). Feel free to leave critiques, suggestions or games, wherever I posted this to help me improve it. I most definitely do not have everything so be sure to Ctrl F and search for the game to double check it's here, If not then tell me and i'll add it.

Sauces n' Thanks

meauxdal from selectbutton.net for their list that helped me find all the Amiga/Amiga CD 32 FPS games and everything released in the 80's. Also thanks for some odd bits and bobs from some of the users in the thread for a lot more niche stuff like Subterraneans and Immoral Cumbat:

Stop Skeletons from Fighting for bringing my attention to the FPS segments in Tron 2.0: Killer App for the GBA: <https://youtu.be/m6SfWrHcltg?t=595>
