My summaries from this video involve combining multiple strings and are as follows.

bone regeneration 214.318.214.818

joint regeneration 814.312.214.712

We cross out the same digits in the same places in both sets and write the rest of the two sets one by one. This gives us a combined set that replaces both original sets.

merged strings into one 2.8.888.2.72 *replaces both strings above*

cartilage regeneration 314.217.914.819
