

Atlas Arcade Fun Support

Need help with Atlas Arcade Fun for iPhone or iPad? Contact the developer, Jay Niraula, at jaynir@gmail.com.

Report a problem

Please include the game name, what happened, what you expected, and the steps that caused the problem. Your device model, iOS or iPadOS version, and app version can help identify the issue. You may attach a screenshot if helpful; remove any personal information first.

Game progress

Scores, medals, preferences, and saved rounds are stored on your device. The app does not provide an account or its own cloud synchronization service. Deleting the app can remove your progress, so contact support before reinstalling to troubleshoot a problem.

Playing offline

The games work without an internet connection. Downloading the app, receiving updates, using TestFlight, and sending support email require a connection.

Controls and settings

Choose a category from the home screen, then choose a game. Read the instructions before starting. Use the in-game pause or navigation controls to return to the menu. Settings include calm play and optional haptic feedback.

Privacy questions

For questions about your information or to request deletion of support messages you have sent, email jaynir@gmail.com. You do not need to provide an account password or payment information for support.
